AGENDA ITEM

Water Conservation

RECOMMENDATION

NA

BACKGROUND

The state is in the midst of a historically significant multi-year drought. January and February of 2022 were the driest on record. Water is a finite resource and reserves are nearly used up. Unless major precipitation occurs quickly, the outlook for this year's water situation is grim. City leaders have received word from Weber Basin Water Conservancy District that we should expect significant watering restrictions and that we may approach the point where we all will have to prioritize culinary water needs over secondary watering, individually and collectively. Water conservation is paramount.

We need to discuss the situation's various aspects, including but not limited to:

- How should the City support secondary water companies in the City?
- How should the City proceed with watering City parks and other facilities?
- How should we treat those residents who are not on secondary systems and must use culinary water for outside purposes?
- Should the City still require all landscaping for new homes be installed within 18 months?
- How should the City proceed with our own new landscaping projects that are scheduled to be installed at Canyon Meadows Park and the Posse Grounds?
