SOUTH WEBER PLANNING COMMISSION AGENDA

Watch Live or at your convenience: https://www.youtube.com/channel/UCRspzALN_AoHXhK_CC0PnbA

PUBLIC NOTICE is hereby given that the Planning Commission of SOUTH WEBER CITY, Utah, will meet in a regular public meeting on Thursday December 9, 2021, in the Council Chambers, 1600 E. South Weber Dr., commencing at 6:00 p.m.

OPEN (Agenda items may be moved in order or sequence to meet the needs of the Commission)

1. Pledge of Allegiance: Commissioner Boatright
2. Public Comment: Please respectfully follow the guidelines below: Comments will also be accepted at publiccomment@southwebercity.com to be included with the meeting minutes.
    a. Individuals may speak once for 3 minutes or less
    b. State your name and address
    c. Direct your comments to the entire Commission
    d. Note: Planning Commission will not respond during the public comment period
3. Approval of Consent Agenda
    a. PC2021-11-10 Minutes
4. Public Hearing & Action on Preliminary Plat, Improvement Plans (for entire development) & Conditional Use (for CH zone over 1 acre) for South Weber Gateway Project (62 Lot R-7 Residential) & (18,824 sq ft. C-H Commercial) located at approx 2350 E South Weber Drive. by Applicant Brad Brown from Colliers International
5. Discussion: Landscape Ordinance
6. Planning Commissioner Training: Property/Vesting Rights
7. Planning Commission Comments (Boatright, Davis, Losee, Johnson, Walton)
8. Adjourn

In compliance with the Americans with Disabilities Act, individuals needing special accommodations during this meeting should notify the City Recorder, 1600 East South Weber Drive, South Weber, Utah 84405 (801-479-3177) at least two days prior to the meeting.

THE UNDERSIGNED DULY APPOINTED DEVELOPMENT COORDINATOR FOR THE MUNICIPALITY OF SOUTH WEBER CITY HEREBY CERTIFIES THAT A COPY OF THE FOREGOING NOTICE WAS MAILED, EMAILED, OR POSTED TO: 1. CITY OFFICE BUILDING 2. FAMILY ACTIVITY CENTER 3. CITY WEBSITE www.southwebercity.com 4. UTAH PUBLIC NOTICE WEBSITE www.pmn.utah.gov 5. THE GOVERNING BODY MEMBERS 6. OTHERS ON THE AGENDA

DATE: November 24, 2021 **DEVELOPMENT COORDINATOR: Kimberli Guill**

SOUTH WEBER CITY
PLANNING COMMISSION MEETING

DATE OF MEETING: **10 November 2021** **TIME COMMENCED:** **6:00 p.m.**

LOCATION: **1600 E. South Weber Drive, South Weber, Utah**

PRESENT: **COMMISSIONERS:** **Gary Boatright**
Jeremy Davis
Wes Johnson
Julie Losee
Taylor Walton (excused)

COMMUNITY SERVICE DIRECTOR: **Trevor Cahoon**

CITY ENGINEER: **Brandon Jones**

DEVELOPMENT COORDINATOR: **Kimberli Guill**

Transcriber: Minutes transcribed by Michelle Clark

ATTENDEES: Blair Halverson, Paul Sturm, Rod Westbroek, Jon Parry, Connie Martin, and Cinnamon Davis.

Commissioner Boatright welcomed those in attendance and excused Commissioner Walton from tonight's meeting.

PLEDGE OF ALLEGIANCE: Commissioner Losee

2. Public Comment: Anyone requesting to comment live via Zoom must pre-register at the following https://forms.gle/PMJFhYFJsD3KCi899 before 5 pm on the meeting date. Comments will also be accepted at publiccomment@southwebercity.com

a. Individuals may speak once for 3 minutes or less.
b. State your name and address.
c. Direct comments to the entire Commission
d. Note Planning Commission will not respond during the public comment period.

Paul Sturm, 2127 Deer Run Drive, voiced his concerns with agenda item #5. He asked what the definition is of "substantial". He has a problem with "water sense labels". In his opinion, he is not in favor of requiring lawn not to exceed 35% of total landscaped area. He is concerned about the cost on requiring certain sprinkler systems. He questioned who pays for the internet service required to operate an automatic controller. He feels Weber Basin is trying to dictate what the Planning Commission and City Council must approve with landscape and irrigation plans. He is concerned some of the proposed code and ordinance changes will potentially have a negative impact on South Weber City residents.

ACTION ITEMS:

3. Approval of Consent Agenda

- **Planning Commission Minutes of 20 October 2021**

Commissioner Losee moved to approve the consent agenda with an amendment to the correct date on the minutes. Commissioner Johnson seconded the motion. A roll call vote was taken. Commissioners Boatright, Davis, Johnson, and Losee voted aye. The motion carried.

4. Presentation: Water-Wise Landscape & Incentive Program by Weber Basin Water

John Parry, Assistant General Manager at Weber Basin Water Conservancy, approached the Planning Commission. He pointed out he is in attendance to help facilitate and work with the city concerning water-wise landscape. He explained the climate in the area is variable, which means the amount of water received fluctuates each year. There is a need for more efficiency in water use. As communities adopt water-wise landscape there are incentives for residents.

Commissioner Davis suggested assigning a certain amount of water to each home, and then individuals will water accordingly. John pointed out the amount of water varies every year. Commissioner Johnson commended Weber Basin Water Conservancy for their efforts. He would like to see more xeriscaping and feels there should be more of it on all new developments in the city. He suggested more native vegetation and disposing of Kentucky bluegrass.

Commissioner Losee discussed the difficulty with mulch with the wind factor in South Weber City. John defined mulch as any material that creates a barrier between the ground and air. He discussed putting requirements on new growth but creating incentives for existing homes. He announced the incentive to flip the strip or remove sod from the park strip is $1.25 per sq. ft. More information for this is found on Weber Basin Water Conservancy's website.

Commissioner Boatright favored conserving as much water as possible. He suggested city staff draft an ordinance with the Code Committee. City Engineer Brandon Jones discouraged installing concrete in park strips because there are utilities located in them.

Trevor asked how proactive does the code need to be on new construction? Commissioner Losee wants to make sure a property owners rights are honored and doesn't feel the city should be telling them how to landscape their yards. Commissioner Davis favored xeriscaping. Commissioner Johnson suggested keeping it within the park strip. Commissioner Boatright would rather have water to drink, bathe, and launder clothes and feels the city needs to be serious about conserving water. Trevor asked if this should be required for residential, commercial, and industrial properties.

5. Discussion: Landscape Ordinance Options

Due to current impacts of the prolonged drought across the state, it has become necessary to reduce water usage to preserve this resource for future generations. A particular concern for water usage is the impact that landscape maintenance has on the supply. Excessive watering for non-native and drought intolerant vegetation brings a need for change.

Weber Basin as well as other water districts throughout the state are implementing incentive programs to help users convert current vegetation to a more water-wise solution, and are encouraging municipalities to update ordinances to promote, encourage, or require water-wise landscaping on new construction. Weber Basin has provided a draft ordinance for cities to consider. Cities must adopt a water-wise landscape ordinance in order to qualify for incentive programs.

Commissioner Losee moved to open the public hearing for South Weber City Code: (Multiple Sections) Private Rights-of-Way. Commissioner Johnson seconded the motion. A roll call vote was taken. Commissioners Boatright, Davis, Johnson, and Losee voted aye. The motion carried.

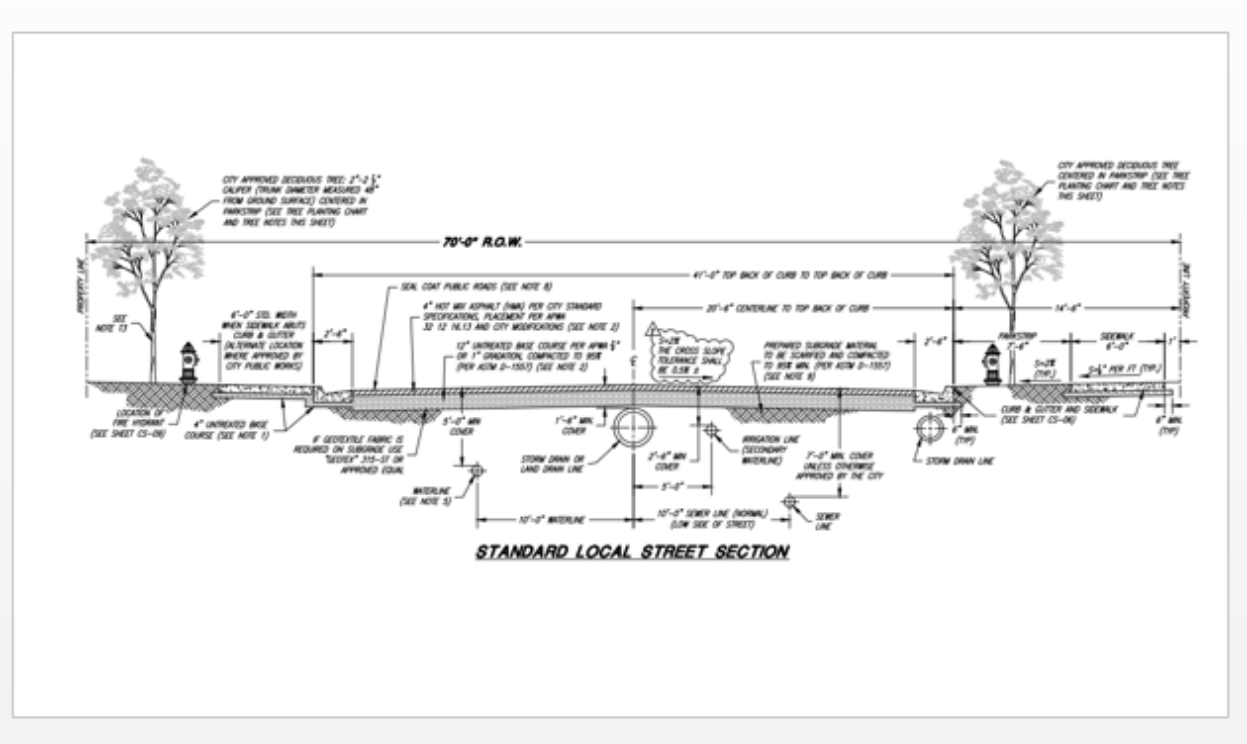
********** PUBLIC HEARING **********

6. Public Hearing & Action on South Weber City Code: (Multiple Sections) Private Rights-of-Way

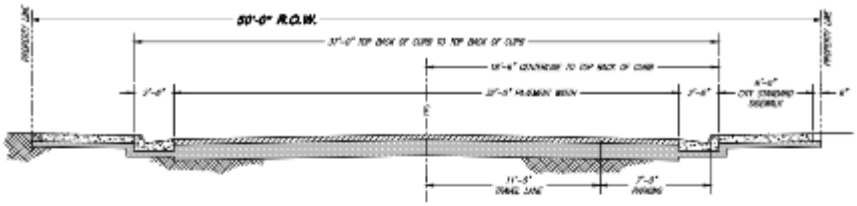
Community Service Director Trevor Cahoon reported for years the city has allowed the utilization of private rights-of way (ROW). Whether it was to access a farm or to build a new subdivision. He expressed we have all seen and experienced the bad examples of private roads. The city wants to prevent bad applications of the code, but utilizing private ROW allows for better use of some project areas and can facilitate better design. Tonight's action was not developer initiated or led, it was an issue in the code that was identified by staff needing clarification and will help any landowner wishing to utilize the development potential of their land. It does not facilitate more density, rather it provides flexibility of development.

Trevor explained there is ongoing maintenance with new roads which require plow routes, surfacing schedules, and general maintenance year-round. Private roads will have an overseeing organization responsible for maintenance. This includes multi-family, commercial and industrial applications.

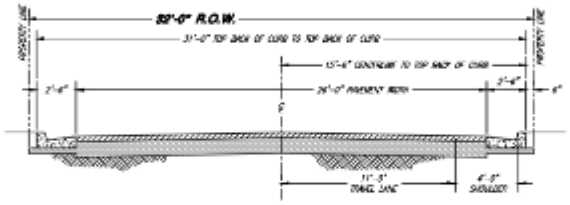
He noted zoning restricts development, more than private roads restricts development. The city's general plan will show that implementation of Options A, B, or D will not be substantially impacted within the city. He stated private roads can be very small.



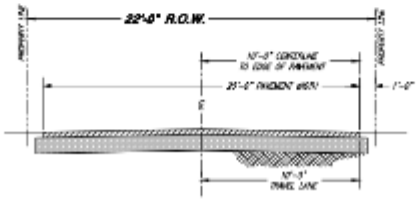
STANDARD LOCAL STREET SECTION



50' RIGHT-OF-WAY
PRIVATE ROADWAY STREET SECTION **A**



32' RIGHT-OF-WAY
PRIVATE ROADWAY STREET SECTION **B**



22' RIGHT-OF-WAY
PRIVATE ROADWAY STREET SECTION **C**

Trevor asked if there is a need to add a definition for public street. He also discussed omission of 10-11-6(C) as it is redundant language and moving 10-11-6 (C) to Title 11 to consolidate the code and remove redundancies.

Option A

- This is the original proposal with private ROW being allowed everywhere but R-M, R-LM, and R-L. One major revision was requiring commercial and industrial zones to follow the R-P standards but disallow on street parking in these areas.
- The number of units allowed was removed, and the code references the South Weber city Public Works Standard Drawings which will have the cross sections. The size and finish requirements are stripped from the PUD and reference the underlying zone allowances.

Option B

- This is like option A, but in this version R-7 does not allow private ROW.

Option C

- This option will only allow private ROW within PUDs and gives the PUD options for any of the cross sections provided in the City Standard Drawings. The size and finish requirements are stripped from the PUD and reference the underlying zone allowances.

Option D

- This option is similar to Option A and combines the PUD portion of Option C. The main difference is that this option requires a 32' street for an R-7 but disallows parking.

Option E

- This has removed the option of residential private ROW.

Commissioner Boatright asked if there was any public comment.

Paul Sturm, 2127 Deer Run Drive, expressed snow removal becomes a problem when roadways have a six-foot sidewalk without a park strip. He suggested paragraph C, subparagraph 2 should reference the South Weber City General Plan as the source of the South Weber City Transportation Map, as well as all the subsequent references in this and other options. He opined the word "will" should be changed to "shall". He preferred option E but feels it might be challenged for being too restrictive. Option A seems to provide the best overall benefit and protection for citizens. He suggested amending 10-5-2 item #2 from "On-street parking shall not be permitted" to "No overnight on-street parking shall be permitted."

Commissioner Boatright moved to close the public hearing for South Weber City Code: (Multiple Sections) Private Rights-of-Way. Commissioner Johnson seconded the motion. A roll call vote was taken. Commissioners Boatright, Davis, Johnson, and Losee voted aye. The motion carried.

********** PUBLIC HEARING CLOSED **********

Commissioner Losee favored Option B. Commissioner Johnson agreed. Commissioner Johnson asked if the road study has been completed. Brandon relayed the study had been completed; however, he hasn't received the information yet. Trevor expressed all options will be presented

to the City Council upon recommendation from the Planning Commission. He acknowledged the city staff recommended Option A. Commissioner Boatright opined this will not have a huge impact on existing residents. He favored Option A. Trevor stated Option A will allow for more flexibility of land use design. Brandon preferred Option A because of the maintenance factor. Trevor discussed the efforts already taking place to maintain current city roads. Commissioner Davis favored Option A.

Commissioner Davis moved to recommend approval to the City Council South Weber City Code (Multiple Sections) Private Rights-of-Way Option A & Option B with amendments to consider Brandon's comments (SEE REDLINE IN PACKET). Commissioner Johnson seconded the motion. A roll call vote was taken. Commissioners Davis, Johnson, and Losee voted aye. Commissioner Boatright voted nay. The motion carried 3 to 1.

Community Services Director Trevor Cahoon explained during the discussion on the Internal Accessory Dwelling Unit (IADU) and recommendation to the City Council at the August Planning Commission meeting, the Planning Commission moved to recommend the IADU ordinance with the recommendation to look at the parking ordinance within Title 10. Parking for the IADU ordinance has been detailed in the new ordinance. This review is centered on how the city can address the parking needs for residential units and have a more consistent approach to what will be required when creating parking. This discussion will only focus on parking within Title 10 and will not be focused on parking enforcement in Title 6.

The current city code does not reference what type of surfacing is required for off-street parking in residential zones. Nor does it specify what materials should be used for any accessory parking. The updates to this chapter include defining what parking surfacing should be used in the construction of new residential units including internal dwelling units, allowances for accessory parking surfaces, and updates the number of parking spaces table found in the chapter.

Commissioner Johnson moved to open the public hearing for South Weber City Code: 10-8-2 Off Street Parking. Commissioner Losee seconded the motion. A roll call vote was taken. Commissioners Boatright, Davis, Johnson, and Losee voted aye. The motion carried.

********** PUBLIC HEARING **********

7. Public Hearing & Action on South Weber City Code: 10-8-2 Off Street Parking

Commissioner Boatright asked if there was any public comment.

Paul Sturm, 2127 Deer Run Drive, commented the word "hereafter" in 10-8-2 Off Street Parking Page 70 Paragraph F needs to be emphasized to alleviate citizen concerns of potential retroactive enforcement.

Commissioner Boatright moved to close the public hearing for South Weber City Code: 10-8-2 Off Street Parking. Commissioner Davis seconded the motion. A roll call vote was taken. Commissioners Boatright, Davis, Johnson, and Losee voted aye. The motion carried.

********** PUBLIC HEARING CLOSED **********

Commissioner Davis moved to recommend approval to the City Council of South Weber City Code: 10-8-2 Off Street Parking. Commissioner Losee seconded the motion. A roll call vote was taken. Commissioners Boatright, Davis, Johnson, and Losee voted aye. The motion carried.

8. Planning Commissioner Training: Subdivision Approval Process:
Community Services Director Trevor Cahoon explained under Utah House Bill 409 passed by the Utah State Legislature effective May 5, 2021, members of local planning commissions are required to complete 4 hours of training each year. New planning commission members cannot act in official capacity until the 4 hours of training are complete.

Trevor reviewed South Weber City development approval process.

Development Process:
Concept/Sketch Plan – initial conversation with developer review sketch plan and recommend next steps which city staff approves.
Preliminary Plan – review of sketch requirements, and review of necessary documents. After staff review, Planning Commission approves.
Final Plan – after completing requirements from preliminary, and review all documents are finalized, Planning Commission recommends City Council approves.
Construction – records final plat, preconstruction meeting is held, and staff approves.

Sketch Plan:

Site Plan:

- All existing easements (utilities, access, etc.)
- Vicinity Map
- Date, North point, Written & Graphic Scales
- Name, Address, Phone Number for Engineer and/or surveyor who prepared plans – Location and dimensions of proposed sites to be dedicate or reserved for open space or recreational use
- Location and dimensions of proposed sites to be reserved in private ownership for community use
- Location and ownership information of all canals, ditches, and/or waterways within the subdivision
- Boundaries of Sensitive Lands as shown in General Plan
- Names of surrounding property owners
- Data Table that includes:
  - Number of lots/units
  - Buildable area of each lot
  - Percentage of buildable land
  - Percentage of landscaping or open space
  - Density of dwelling units per acre
- Proposed transportation system (including trails) and street layout (width and proposed right of way cross sections)

- Fire Flows in the Area (Contact Fire Department 801-476-8907)
- Grading and Storm Drainage Plan
- Existing Topography
- Existing Utilities
- Existing Natural Features,

Context Plan:

- Existing Topography
- Existing Utilities
- Existing Natural Features, Drainage Channels, Special Views, Existing vegetation to be preserved
- Existing Buildings
- Existing Ingress and Egress Points
  - Location, names, and existing widths of adjacent streets

Developments Other Than Standard Residential:

- Building footprint (if known)
- Number of proposed parking spaces (common & private)
- Landscaping Plan
- Lighting Plan
- Signage Plan

Preliminary Process:

- Complete all conditions/requirements set by the Sketch Plan Committee
- 1 Set of Mailing Labels – listing the names/mailing addresses for property owners within 300' for the outer boundaries of the property
- A list of delineating parcel numbers for each of the surrounding property owners
- Current Title Report and proof of Title Insurance
- Draft of easement/agreements with adjacent property owners (if applicable)
- Draft of Covenants, Conditions, and Restrictions (if applicable)
- Complete Utility Notification Form
- A letter of approval from applicable Secondary Water provider stating date of plans reviewed and date approved
- A written statement from the Army Corps of Engineers regarding wetland mitigation (if applicable)
- Preliminary Storm Drain Calculations (See Storm Drain Ordinance)
- Geotechnical report if recommended at Sketch Plan
- Traffic Impact Study if recommended at Sketch Plan

What needs to be on the drawings?

- The approved name of the subdivision and the words "Preliminary Plat – Not be Recorded" listed on each page
- Written indication of design criteria to be used in design of improvements

- Dimensions shown in feet and decimals
- Bearings shown in degrees, minutes, and seconds
- Contours at two-foot intervals for predominant ground slopes between level and ten percent
- Contours at five-foot intervals for predominant ground slopes greater than ten percent
- Location and sizes of proposed sanitary sewers and other sewage disposal facilities
- Location and sizes of culinary water facilities
- Location and size of storm drainage facilities and detention basins
- Wetland Delineation if recommended at Sketch Plan
- Boundaries of areas subject to flooding or storm water overflow in accordance with
- FEMA's flood plain mapping
- Width and direction of flow of all watercourses
- Include existing and proposed irrigation and natural runoff channels/courses
- Location, proposed names, widths and typical cross section of streets, curbs, gutter, sidewalks, and other improvements of proposed street rights-of-way and access easements
- Dimensions and locations of all existing or proposed dedications, easements, and deed restrictions
- Location of any improvements they may be required to be constructed beyond the boundaries of the subdivision (as appropriate)
- Type and size of fencing shown along canals, waterways, and agricultural land

Final Subdivision:

- Complete all conditions/requirements set by the Planning Commission at Preliminary Approval
- Finalized Draft of Covenants, Conditions, and Restrictions (if applicable)
- Finalized Storm Drain Calculations
- Any applicable agreements finalized, signed, and proof of recording with county provided (agreements with South Weber City must be finalized and remain unsigned)
- Electronic finalized set of certified, stamped construction drawings and specifications as prepared by a licensed civil engineer

REPORTS:

Commissioner Davis: emphasized the Planning Commission's role is not legislative, but administrative. Commissioner Johnson pointed out the Planning Commission makes sure the general plan is followed.

ADJOURNED: Commissioner Johnson moved to adjourn the Planning Commission meeting at 8:09 p.m. Commissioner Losee seconded the motion. Commissioners Boatright, Davis, Johnson, and Losee voted aye. The motion carried.

APPROVED: _____ **Date**
Chairperson: Gary Boatright

_____
Transcriber: Michelle Clark

Attest: Development Coordinator, Kimberli Guill

Comments to South Weber City Planning Commission
for 10Nov21 Meeting
by Paul A. Sturm

I Agenda Item #5 -Discussion on Landscape Ordinance Options

SWC's General Plan states a major goal is to maintain a "Country Feel" in the City. This should be always taken into consideration when any changes to Code or Ordinance are made.

1. Packet Page 16 of73 - Background
   The last sentence states that the Ordinance being shown for consideration was approved by Layton. South Weber City is no Layton and never wants to be such a congested and out of control City with its massive high density projects. (for example look at the development permitted at the corner of Fairfield and Gordon. Garages have to be offset to permit residents to exit their garages without hitting one another, and there is no additional parking.)

2. Packet Page 16 of73 - Requirements - Applicability
   What is meant by "Required on all new or **'Substantial'** renovation projects". What is the definition of "Substantial".

3. Packet Page 16 of73 - Requirements - Indoor Recommendations
   I have a problem regarding requiring "Watersense" labels. How is that going to be regulated and enforced? Do we have "Big Brother" watching us?

4. Packet Page 16 of73 - Requirements - Residential Outdoor - Sub-bullet 6 -**." Lawn shall not exceed 35% of total landscaped area."**
   This requirement is insane with respect to the character and code of SWC. With the current twenty-five foot (25') setback requirement, the only lawn permitted would be the front yard! All back yards would not be permitted to have a lawn. What type of family experience would that requirement create?
   Also please see Packet Page 36 of 73 near the bottom of the page Code 10-7F-6 - Landscaping**. All open spaces and setbacks shall be adequately landscaped to provide a park-like appearance (Ord. 96-1, 9-10-1996, eff. 9-12-1996**.
   These two SWC code/ordinances are in direct conflict with the statement from Layton City!

5. Packet Page 16 of 73 - Requirements - Residential Outdoor - Sub-bullets #1 and #2
   This creates a burdensome cost on the installation of a sprinkler system. Requiring multiple pressure regulators, separate valves for different slopes, and not permitting differing sprinkler heads on the same irrigation valve is ridiculous! As proposed the cost of an irrigation/sprinkler system would cost approximate 1.5 to 2 times as much. Such a design/operational requirement would require several large automated controllers. I would estimate an additional $5-10K cost for all of the equipment and labor for installation of the myriad of pipes necessary, plus the environmental impact of all of the additional plastics being used!

6. Packet Pages 21 and 23 (Section 8) of 73 (Starting from Section 5 - Definitions - Located on Page 18 of 73)
   Definition of "Smart Automatic Irrigation Controller: As described on Pages 21 and 23 of 73, who pays for the Internet Service required to operate this Automatic Controller? What additional wiring and internet equipment would be required to connect the Automatic Controller to the internet? What safeguards does SWC have to keep Weber Basin from the "Camel-in-the-tent" scenario and imposing a mandate on all SWC residents?

7. Packet Page 25 of 73 Section 9 - Landscapes in New Single-Family Residential Developments.
   A) Once again the "Shall Not Exceed" 35% requirement is mentioned in Paragraph A. The same concerns exist with this reference.
   B) Mentions "Landscaping Design Standards" and large spaces requiring overhead sprinkling. These terms are not defined.
   C) It seems that Weber Basin is trying to dictate what the Planning Commission and ultimately the City Council must approve with landscape and irrigation plans. These are not mentioned until later in this information.

Please Note: The definitions of Landscaping and Irrigation Plans is not described until the next page while referencing Commercial, Industrial, and Institutional Developments where it references Landscape Plans, Irrigation Plans , and a Planting Plan and appropriate Documentation Packages. Also mentions a "Landscape Architect" This further increases the cost to residents in an already costly market where "Affordable Housing" is becoming less affordable!

8. Packet Page 30 to 37 of 73 - Current References in Code (SWC)
   Adoption of some or all of these proposed code and Ordinance changes will potentially have a huge and potential negative impact on SWC residents.
   10-14-13 6b -- The word "details" would be replaced "plans".
   10-15-1 - This "Purpose" needs to be maintained.
   10-15-2 A. and B.- Needs to be maintained.
   10-15-3 - A. - The highest density residential is R-7.
   10-15-3 - B. - Consider the costs of preparing the Weber Basin proposed regulations
   10-15-4 - Needs to be maintained.
   10-15-5 - Needs to be maintained. For A. 2 - A minimum trunk size of 5 Feet in height makes no sense.
   10-15-6 - Park Strips & Landscaping - Changes may need to be considered. But, Additional costs will happen with removing and replacing sod with something else &moving existing sprinklers.
   10-15-7 - What does the text "*water waste*" mean? It seems this was added.
   10-13-4 - Needs to be maintained.
   10-7F-6 - All open spaces and "SETBACKS" shall be adequately landscaped to provide a park-like appearance (Ord. 96-1, 9-10-1996)
   10-50-6 - Needs to be maintained.

1

PUBLIC HEARINGS

II Agenda Item #6 -Public Hearing and Action on South Weber City Code (Multiple Sections Private Rights of Way (Pages 38 to 50 of 73 for Planning Memorandum - and Pages 51 to 68 of 73 for Public Hearing.

General Comment on allowing roadways to have a six foot sidewalk without a "Park Strip" area of some width.
Snow removal becomes a problem/concern when plows, without an increased distance completely cover the sidewalk with snow which becomes a safety hazard for pedestrians.

Comments on the Various Options (A, B, C, D, E) for Private Right of Way

1. Packet Page 45 of 73 - Section 1 - 11-4-4 Streets Easements and Numbers
   A.) Paragraph C. Subparagraph 2. - Should reference the SWC General Plan as the source of the SWC Transportation Map contained in the "Engineer's Notes" for Option A.

Note: This same change should be made for all subsequent references in this and other options.

B.) I agree Brandon's comments. They make a lot of sense to clarify what the requirements for a Private Road must include.

C.) There are many instances throughout these packet documents where the word "will" is used and it should be changed to "shall". There is a distinct legal meaning between these two words.

D.) As far as which Private Right-of-Way Option I would prefer Option E, but I feel it might be challenged for being too restrictive.
I like Option A. as the preferred option because It seems to provide the best overall benefit to, and protection for citizens. This should also include the following two additions.
i) Incorporate Brandon Jones comments.
ii) Amend the 2. statement in 10-5C-12 "Private Rights of Way (Note: R-7) for "2. On-street parking shall not be permitted" and substitute "No overnight on-street parking shall not be permitted. I believe that this requirement would be too burdensome for a majority of residents if they are having a party or friends visiting.

****

III Agenda Item #7 -Public Public Hearing and Action on South Weber City Code:
10-8-2 Off Street Parking - Pages 69 to 72

Comment on text of 10-8-2 Off Street Parking Page 70 of 73 Paragraph F.
The word **"hereafter"** needs to be emphasized as it was discussed several times during prior Planning Commission meeting discussions. This is very important to alleviate citizen concerns of potential retroactive enforcement.

Preliminary Tasks

Complete all additions/alterations/requirements set at the Sketch Plan

- [x] 1 Set of Mailing Labels listing the names/mailing addresses for property owners within 300' of the outer boundaries of the property.
- [x] A list of delineating parcel numbers for each of the surrounding property owners.
- [x] Current Title Report and proof of Title Insurance
- [x] Draft of easements/agreements with adjacent property owners (if applicable)
- [x] Draft of Covenants,Conditions & Restrictions (if applicable)
- [x] Completed Utility Notification Form
- [x] A letter of approval from applicable secondary water provider stating dates of plans reviewed and date of approval.
- [ ] A written statement from the Army Corps of Engineers regarding wetland mitigation (if applicable)
- [x] Preliminary Storm Drain Calculations
- [x] Geotechnical Report
- [x] Traffic Impact Study (if recommended at Sketch Plan)

Comments

Private ROW - At the time of submission the project does not meet current code. Private ROW are being considered by the City Council Dec. 7. This is the only portion of the project that doesn't meet code.

Traffic Impact Study - Study was completed 23 November and subsequently updated 1 December to meet submission comments from City Engineer.

Buffer Yard - Developer has asked for buffer yard requirements to be waived in favor of a 3' berm with a 3' vinyl fence to be installed. See notes.

Fence Between R-7 and lower density - Per code the developer is required to put a screening fence between thier project and lower density zones. Existing conditions to be considered, developer requesting waiver of requirement.

PLANNING MEMORANDUM

SOUTH WEBER city
1600 E. South Weber Drive
South Weber, UT 84405
www.southwebercity.com
801-479-3177
FAX 801-479-0066

To: Planning Commission
From: Trevor Cahoon, Community Services Director

Re: South Weber Gateway Development – Preliminary Application

Project Information	
Project Name	South Weber Gateway
Site Location	Approx. 2300 E South Weber Dr
Tax ID Number	13-034-0068
Applicant	Brad Brown
Owner	Jane M Poll - Trustee
Proposed Actions	Preliminary Approval of Subdivision
Current Zoning	R-7 & C-H
General Plan Land Use Classification	Commercial Highway with Development Agreement
Gross Site	11.64 Acres

ACTION

Administrative Action: Consider approval of South Weber Gateway Development.

STAFF REVIEW SUMMARY

After a tertiary review of the preliminary application for South Weber Gateway Development, staff would recommend approval subject to the conditions listed below:

- Private Right-of-way: Developer has submitted a project that includes a private road to the residential portion of the property. This does not currently meet city code; however, the City Council is reviewing a Private Right-of-way ordinance at the December 7 City Council meeting. The road proposed does meet the requirements of the drafted ordinance under consideration. Approval would be based on the outcome of that decision. Developer was made aware of this condition and made the decision to proceed with the application without a decision.
- Buffer Yard: Recommendation to the City Council to waive the requirement for a 6-foot masonry wall in the buffer yard, in favor of a raised 3-foot berm with a 3-foot vinyl fence on the crest of the hill.
- Screening Fence: A screening fence is not included between the residential zones to the rear of the property. Fencing is currently provided for most of the homes in the area. Preliminary approval can be given with the condition that the intent of this requirement is met. City Council will need to determine if this requirement is satisfied due to natural buffering on the south end of the property and the existence of current fencing on properties.

PLANNING COMMISSION MOTION SUGGESTED LANGUAGE

After careful consideration of the information presented, the South Weber Planning Commission moves to:

1. Approve the Preliminary Application for South Weber Gateway Development.
2. Approve the Preliminary Application for South Weber Gateway Development with the following conditions or recommendations:
    a. Recommend approval of the buffer yard alternative proposed by the Developer to the City Council.

    OR

    Recommend denial of the buffer yard alternative proposed by the Developer to the City Council.

    b. The required screening between R-7 and lower density zones has been satisfied in accordance to City Code and present conditions on the property.
    c. (*Any other conditions that need to be met)*
    d. All other recommendations notated by the City Engineer and City Planner have been incorporated into the final application.
3. Deny the Preliminary Application for South Weber Gateway Development for the following reasons:
    a. (List reasons based upon City Code.)
4. Continue the Preliminary Application for South Weber Gateway for consideration at a future date.

BACKGROUND

The South Weber Gateway has been working on a potential development for the proposed site for several years. After development plan negotiations the City Council requested the developer to move forward with a rezone application. In July 2021 the property rezone request was approved by the City Council to have the front portion of the property rezoned to commercial highway (C-H) and the back portion of the property as Residential Multi-Family (R-7). The application has met all requirements of a preliminary application and has been passed forward the Planning Commission for consideration.

PLANNING CODE REVIEW

PL-1: Zoning

- **Complete:** Zoning is consistent with request.

PL-2: Project Size

- **Complete:** The Project totals 11.64 Acres split into two different zones.
    - 2.6 Acres is commercial
    - 9.04 Acres is R-7 this meets the acreage allowed to be zoned R-7.

PL-3: Lot Area/Density

- R-7 - **Complete**
  - There are no minimum lot area requirements for a townhome use.
  - Current density calculations are 6.58 units per acre. This meets code.
- C-H - **Complete**
  - There are no minimum lot area requirements.
  - There are no density requirements

PL-4: Lot Width

- R-7 - **Complete**
  - Minimum width of each lot needs to be 100'. Subdivision will be platted as townhomes so this would comply.
- C-H - **Complete**
  - No minimum with required.

PL-5: Setbacks

- R-7 - **Complete**
  - Setback needs to be 30' from front and rear lines. The units appear to comply.
- C-H - **Complete**
    - Front setback for the C-H zone is 50'. Orientation of the Commercial has switched to the back and complies with setback requirements.

PL-6: Access

- Complete: Access has been reviewed with UDOT and they have expressed approval for the project's access provided there are dedicated right-turn lanes provided. Staff requested traffic study and this has been completed.

PL-7: Roads

- **Does not currently meet code.** Current interior roads do not meet City Code as it relates to private rights-of-way. Current City Code does not allow private ROW to service more than 2 residences. The width of the road is also too narrow per current code. Applicant's request is consistent with the current recommendation that will be heard by the City Council. The approval for the preliminary subdivision would not be able to be obtained until the private ROW is adopted into code by the City Council.

PL-8: Landscaping

- R-7 – **Complete with conditions**
  - At least fifteen percent (15%) of the total site shall be thoroughly landscaped, including an irrigation system to maintain such landscaping. For use of exceptional design and materials, as determined by the Planning Commission, the landscaping may be reduced to ten percent (10%) of the total site. Landscape plan included in submission and equates to 59% of the property.

- A six-foot (6') tall solid screening fence shall be required between the Residential Multi-Family (R-7) Zone and all lower density residential zones. A screening is not included between the residential zones to the rear of the property. Fencing is currently provided for most of the homes in the area. City Council will need to determine if this requirement can be waved due to natural buffering on the south end of the property and the existence of current fencing on properties.

- C-H – **Complete with Conditions**
  - At least fifteen percent (15%) of the total site shall be thoroughly landscaped, including an irrigation system to maintain such landscaping. For use of exceptional design and materials, as determined by the Planning Commission, the landscaping may be reduced to ten percent (10%) of the total site.
  - Buffer Yard: Masonry wall shall be at or near property line. There shall be 1 tree with mature height of at least 25' for every 20' of length of buffer yard or fraction thereof. Ground plane shall be landscaped with shrubs, ground covers, flowers or decorative mulch.
    - Developer is not including a 6-foot masonry wall as a buffer tool, instead they are requesting the use of a raised 3-foot berm with the inclusion of a 3-foot vinyl fence to provide this buffer, with the necessary trees and landscaping. Staff has reviewed this and found it acceptable. This requirement will need to be approved by the city council upon recommendation of the planning commission.

PL-9: Open Space

- R-7 - **Complete**
  - Multi-family dwellings shall provide usable functional open space for outdoor leisure in the
    - Eight hundred (800) square feet per unit for one- and two- family dwellings;
    - Six hundred (600) square feet per unit for three- and four- family dwellings; and
    - An additional four hundred (400) square feet per dwelling unit for each additional unit over four (4).
      - Total square footage needed would be 38,000 for the 62 units.
  - Total open space for the project is 137,977 sq ft.
- C-H - **Complete**
  - No open space required.

PL-10: Outdoor Storage Space

- R-7 - **Complete**
  - Three-family, four-family and multi- family dwellings shall provide enclosed outside storage space of at least thirty (30) square feet for each dwelling unit.
  - A note is included in the drawing showing this space will be provided in the garages of the units.
- C-H - **Complete**
  - None required.

JONES & ASSOCIATES CONSULTING ENGINEERS

M E M O R A N D U M

Kim Guill – South Weber Development Coordinator

RE: SOUTH WEBER GATEWAY DEVELOPMENT
Engineering Review (Preliminary)

Date: December 1, 2021

Our office has completed a review of the Preliminary submittal dated November 23, 2021 (later updated on December 1, 2021), for the South Weber Gateway Development.

STAFF ASSESSMENT

- Zoning: The property is zoned C-H and R-7.

- City Code & Public Works Standards: The preliminary plans meet the requirements of the City Code and City Standards, except for:
    - Private street: The proposed private street for the townhomes is not currently allowed in the R-7 zone unless it is a PUD. This development is not requesting a PUD overlay. However, the proposed street cross section does match Section B in the private streets ordinance previously recommended for approval by the Planning Commission and currently being considered by the City Council.

- Geotechnical Report & Sensitive Lands: In order to meet the requirements of CC 10-14 (Sensitive Lands Development Regulations), a Phase I Environmental Assessment (dated August 27, 2021) and Geotechnical Study (dated September 17, 2021) were performed. The preliminary plans are in compliance with these studies. The final plans will need to incorporate any applicable recommendations.

- Traffic Impact Study: A TIS (dated November 4, 2021) was provided to the city for review. Comments were provided and the study was updated (dated November 23, 2021). A final version was submitted to the city on December 1, 2021. Manual trip counts were taken on November 17, 18, and 19 (Wednesday – Friday) to establish existing conditions. The intersections of 2100 E. and 2700 E. were studied for both existing and future conditions. The two new proposed accesses for the development were studied for future conditions. Both AM and PM peak hours were evaluated. The study determined that

"during the peak hours, all study intersections remained at the same LOS with the addition of the South Weber Gateway development. The two site access intersections will both operate at a lowest approach LOS of C." The design recommendations include "utilizing the existing two-way left-turn lane for left turning west bound traffic entering the development. Restriping for a right turn lane is recommended for east bound traffic entering the development at the East and West Access intersections." The preliminary plans show these improvements.

- Phasing: The preliminary plan includes a phasing plan that shows three phases. Phase 1 includes 31 townhomes and 3 commercial buildings (4,244 sf). Phase 2 includes 31 townhomes and 1 commercial building (2,322 sf). Phase 3 includes 2 commercial buildings (10,523 sf). All utilities necessary for each phase will be installed with that phase.

- Buffer Yard: Rather than install a full 6' tall masonry fence between the C-H and R-7 zones as required in CC 10-15, the developer is proposing a berm with a smaller fence on top, as they feel it provides a better look and feel for the overall development. CC 10-15-7 allows any provisions contained in this chapter to be waived (with just cause). If the Planning Commission agrees with this proposed change to the buffer yard, then they need to make that recommendation to the City Council.

- Architectural Site Plan Approval: Both the C-H and R-7 zones require architectural site plan approval in accordance with the requirements of CC 10-12. The Planning Commission "shall determine if the proposed architectural and development plans submitted are consistent with this Chapter and with the purpose and objectives of this Title." This will need to be reviewed as part of the final approval.

Development Signs:

Please note that a building permit is required for all temporary subdivision signs. Signs cannot obstruct clear and free vision and must comply with all City Codes. Failure to comply will result in sign removal.
Public Notice Authorization: I do hereby give permission to South Weber City to place a public notice sign on the property contained herein for the purpose of citizen notification of this proposed development.

Applicant Certification

I/We swear the statements and answers contained herein, in the attached plans, and other exhibits, thoroughly, to the best of my/our ability, present the argument in behalf of the application requested herewith, and that the statements and information above referred to are in all respects true and correct to the best of my/our knowledge and belief. I also certify that I am the owner of the subject property and that the authorized agent noted in this application has my consent to represent me with respect to this application and to appear on my/our behalf before any city commission, board or council considering this application. Should any of the information or representations submitted be incorrect or untrue, I understand that The City of South Weber may rescind any approval or take any other legal or appropriate action. I also acknowledge that I have reviewed the applicable sections of the South Weber City Land Development Code (SWMC 11) and that items and checklists contained in this application are basic and minimum requirements only and that other requirements may be imposed that are unique to individual projects or uses. Additionally, I agree to pay all fees associated with this project, as set by the current adopted Consolidated Fee Schedule as well as **any fees associated with any City Consultant (i.e. engineer, attorney)**. The applicant shall also be responsible for all collection fees incurred including a collection fee of up to 40% (pursuant to the provisions of the Utah Code Ann. §12-1-11). I also agree to allow the Staff, Planning Commission, or City Council or appointed agent(s) of the City to enter the subject property to make any necessary inspections thereof.

PLANTING NOTES

1. This planting plan is diagrammatic and plant locations are approximate.
2. Field survey, stake, and string the layout and locations of site construction features for approval before actual construction. The layout shall conform to the exact location and grades of the intended work to be done.
3. Coordinate all aspects of the planting plans with the irrigation system and call the attention of the owners representative to any conflict in placement of plants in relation to sprinkler heads, lines and valves at the time the landscape installation phase takes place.
4. Finish grade of soil in lawn areas shall be 2" below pads, walks, paving, headers and curbs to accommodate sod. Grades in areas when seeded shall be 1" lower than adjacent edge.
5. Native topsoil shall be stockpiled and stored on site whenever possible for use in landscape areas.
6. All sod areas shall receive a minimum 4" depth of native topsoil and shrub beds shall receive a minimum of 8" of native topsoil.
7. Imported topsoil, when required, shall come from a reputable source, have a loam consistency and be free of weeds and debris.
8. Face each shrub to give the most pleasing look as seen from a line perpendicular to the wall or walk to/from which it is viewed.
9. Edging or Curbing shall be installed as shown on the plan to separate grass from shrub beds.
10. Shrub beds shall drain properly to prevent standing water from occurring. Call improperly draining planters or planting beds to the attention of the owners representative before planting. Provide positive drainage away from all structures and walls. Slope landscape areas 2% minimum.
11. Place mulch in all shrub beds and perennial areas. See schedule for depth and type. Do not crowd out small perennial plants with excessive mulch.
12. Provide a 3' minimum diameter circle "tree ring" around trees that are placed within lawn areas. Place a 3" min. depth of mulch. Use shredded bark mulch or match mulch being used for shrub beds.
13. The contractor shall maintain all work until work is complete and accepted by the Owner. The contractor shall maintain and guarantee all work for a period of THIRTY DAYS from the date of final acceptance by the Owner. Maintenance shall include mowing, weeding, fertilizing and irrigating.

Project Info.
Engineer: J. NATE REEVE, P.E.
Drafter: N. Peterson
Begin Date: FEBRUARY 19, 2019
Name: SOUTH WEBER GATEWAY SKETCH PLAN
Number: 7152-05

Sheet 3 of 3 Sheets

ATTIC VENTILATION NOTES:

The net free ventilation area shall not be less than 1/300th provided that at least 50% of the area is provided by ventilators located in the upper portion of the space to be ventilated, the other to be provided by vented soffit system.

GENERAL NOTES:

Compliance with codes and ordinances governing the work shall be made and enforced by the general contractor. General contractor shall verify all existing conditions and dimensions prior to construction.
Note that all written dimensions take precedence over scale.
Manufacturers specifications for installation of materials shall be followed.
Workmanship throughout shall be of the best quality of the trade involved and the general contractor shall coordinate the work of the various trades to expedite the job in a smooth and continuous process.

WINDOWS NOTES:

Bedroom windows to have a finished clear opening height max. of 44" from floor.
Windows to have 20" min. clear width and 24" min. clear height.
Bedroom windows to be a min. of 5.7 sq. ft.
Windows to be sized at 1/10th for the sq. for glass size and 1/20th of the sq. ft. for ventilation requirements. Windows within 18" of the floor to be of tempered glass.

EXTERIOR WALL FINISHES MUST BE LISTED, LABELED, AND INSTALLED AS PER MANUFACTURER'S INSTALLATION INSTRUCTION GUIDE. ALL INSTALLERS MUST BE APPROVED BY THE MANUFACTURER.

EXCAVATION NOTES:
All footings shall bear on natural undisturbed soil. Footings shall be excavated to a minimum depth so as to provide frost protection. (30" min.)

The grade adjacent to all foundation wall shall fall a minimum of 6 inches within the first 10 feet (5%)." R401.3 Landings, ramps, patios, porches or decks, which are required to be level or can have a MAXIMUM slope of 1/4" per foot. All other impervious surfaces within 10 feet of the foundation walls must slope a MINIMUM of 1/4" per foot away from walls.

VALIDITY OF PERMIT:
The issuance or granting of a permit or approval of plans, specifications and computations shall not be construed to be a permit for, or an approval of, any violations of any of the provisions of this code or of any other ordinance of the jurisdiction. Permits presuming to give authority to violate or cancel the provisions of this code or other ordinances of the jurisdictions shall not be valid.

The issuance of a permit based upon plans, specifications and other data shall not prevent the building official from thereafter requiring the correction of errors on said plans, specifications and other data, or from preventing building operations being carried on thereunder when in violation of this code or of any other ordinances of this jurisdiction. The building official is also authorized to prevent occupancy or use of a structure where in violation of this code or any other ordinances of this jurisdiction.

SHEET: 1

PLAN NUMBER
SW TOWNHOME

The builder/general contractor (construction professional) must carefully and thoroughly verify dimensions, validity, and overall integrity of the plans. In the event of a discrepancy, prior to construction, Creations West shall be contacted for clarification. At the time of construction, Creations West is relieved of liability and the builder/general contractor assumes full responsibility.

FLOOR PLAN GENERAL NOTES:
1. Plumbing wall 2x6 @ 16" o.c.
2. Attic access 22" x 30" with closer & a switched light in attic space. Location, if shown, is approximated.
3. Exhaust fan, 60 CFM run exhaust duct to the outside. & Provide 30" min. width for the water closet and 24" clear in front
4. Temp. wall and door
5. Vent dryer to outside with 4" metal ducting sealed and secured every 12', termination cap.
6. 12"X12" min. opening installed to provide access to circulation pump.
7. Sufficient access and working space (30" x 36") shall be provided around all electrical equipment.
8. 20 minute fire rated door
9. Backwater valve

GENERAL NOTES:

Compliance with codes and ordinances governing the work shall be made and enforced by the general contractor. General contractor shall verify all existing conditions and dimensions prior to construction. Note that all written dimensions take precedence over scale. Manufacturer's specifications for installation of materials shall be followed. Workmanship throughout shall be of the best quality of the trade involved and the general contractor shall coordinate the work of the various trades to expedite the job in a smooth and continuous process.

GENERAL BATHROOM NOTES:

Shower compartments shall have at least 900 sq. in. of floor area and be of sufficient size to inscribe a circle with a dia. not less than 30 in. Hinged shower doors shall open outward and have a minimum width of 22". The wall area above built-in tubs having installed shower heads and in-shower compartments shall be constructed as per Section R702.4. Such walls shall form a watertight joint with each other and with either the tub, receptor or shower floor. Bathrooms, water closet compartments, and other similar rooms shall be provided with aggregate glazing area in windows of not less than 3 sq. ft., one half of which must be openable. If no windows, a mechanical ventilation system shall be req.. The min. ventilation rates shall be 50 cfm. for continuous ventilation.
Showers & tubs shall have temperature-limiting device complying with IRC P2708.3

Toilet, bath and shower areas to be finished with a nonabsorbent surface in accordance with IRC R307

ALL exterior doors shall have a floor or landing on each side of the door. The floor or landing at a door shall not be more than 1.5 inches lower than the top of the threshold. If the door is not a req. exit door the landing shall not exceeded 8" from top of threshold. All landings shall be not less than 36" wide, measured in the direction of travel.

FIRE PROTECTION:

Provide 1/2" type "x" gyp. brd. on all the walls and ceilings of garage if no habitable space above. Provide 5/8" type "x" gyp. brd. on all the walls and ceilings of garage, if habitable space above garage. Nail @ 6" o.c.. All beams and structural members shall be protected with 5/8" gyp. brd.

Door between garage and house shall be 20 minute rated, solid core wood or "B" labeled door not less than 1 3/4" w/ self closer and self-latching. IRC R302.5

Protect enclosed usable space under stairs with 5/8" gyp. brd. Provide fire resistant construction on the underside of the stairs in accordance with IRC R302.6

Fire blocking at stud cavities that are greater than 8'-0".

Need to fire block all flue's, chases and dropped ceilings.

EXHAUST SYSTEM NOTES:

Dryer exhaust systems shall convey the moisture to the outdoors and shall terminate on the outside of the building. Screens shall not be installed at the duct terminal. Ducts shall have a back draft damper. The max. length of clothes dryer exhaust duct shall not exceed 25 feet from the dryer location to the wall or roof termination. The max. length of the ducts shall be reduced 2.5 feet for each 45 degree bend and 5 feet for each 90 degree bend. Metal ducting shall be sealed and secured every 12 feet.

FIREPLACES:

Where a factory-built chimney assembly incorporates offsets, no part of the chimney shall be at an angle of more than 30 degrees from vertical at any point in the assembly and the chimney assembly shall not include more than four elbows.

Chimneys shall extend at least 3 feet above the highest point where they pass through a roof of a building and at least 2 feet higher then any portion of a building within a horizontal distance of 10 feet.

Listing for any fireplace show on plans shall be provided at mechanical inspection. In the event of a wood burning fireplace, submit listing showing EPA compliance. (IRC R1004.1)

Hose connection back flow preventer shall be installed on the discharge side a hose threaded outlet.

Windows considered to be 0.35 U-Factor typical. U-Factors shall be be determined by testing in accordance with NFRC 100 and labeled as such by the manufacturer per section 1021.3 of the 2015 IECC.

Bottom of operable windows on upper floor to be no closer than 24" from floor in accordance with IRC R312.2.1

APPLIANCES IN ATTICS:
Attics containing appliances requiring access shall have an opening and a clear and unobstructed passageway large enough to allow removal of the largest appliance, but not less than 30 inches high and 22 inches wide and not more then 20 feet long when measured along the centerline of the passageway from the opening to the appliance. The passageway shall have continuous solid flooring in accordance with chapter 5 not less then 24 inches wide. A level service space at least 30 inches deep and 30 inches wide shall be present along all sides of the appliance where access is required the clear access opening dimensions shall be a minimum of 20 inches by 30 inches, where such dimensions are large enough to allow removal of the largest appliance. I.R.C. M1305.1.3

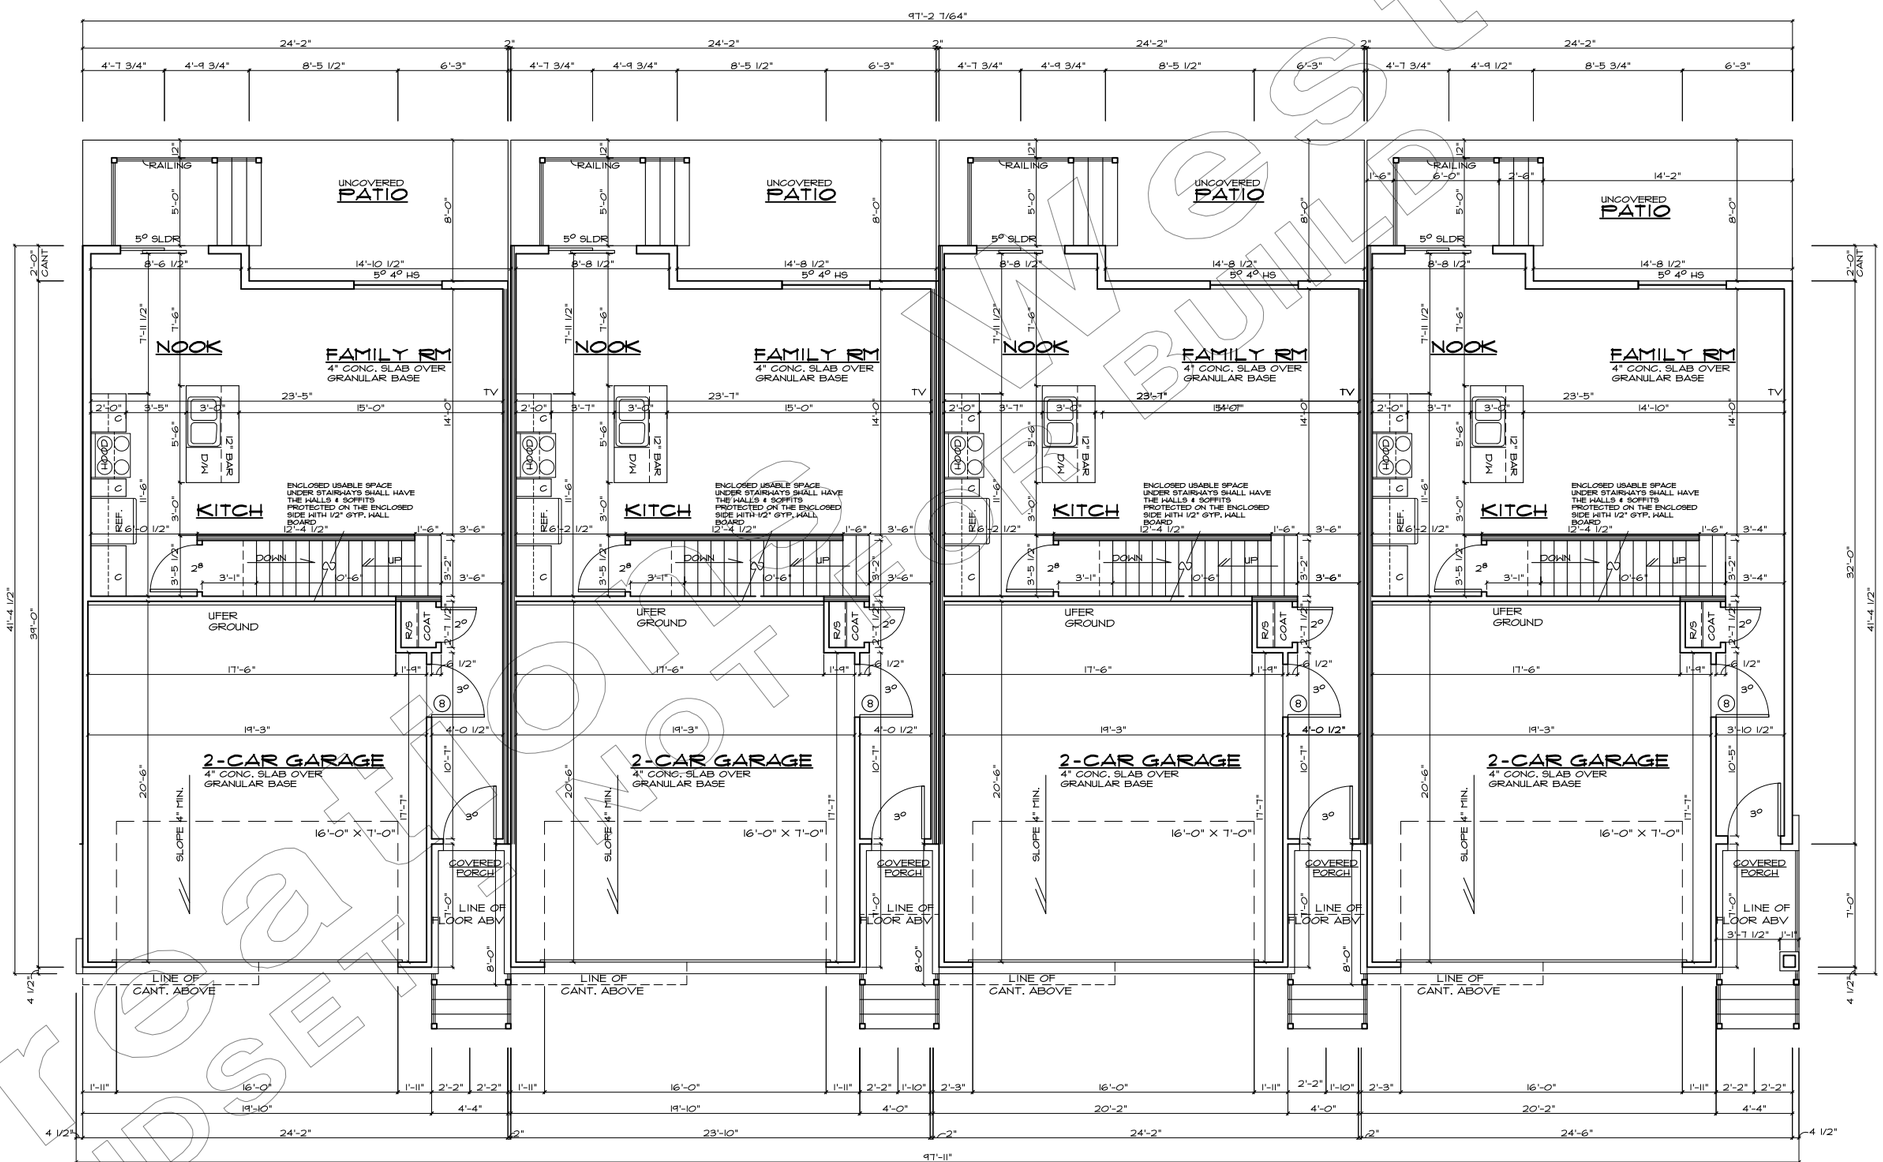
DRYER DUCT:
Dryer duct shall terminate outdoors and shall not exceed a total combined horizontal and vertical length of 35', Maximum length of duct shall be reduced 2-1/2' for each 45° bend or 5' for each 90° bend. Duct shall be a min. nominal size of 4". I.R.C. M1502.4.4

CONDENSATE DISPOSAL:
Condensate from all cooling coils or evaporators shall be conveyed from the drain pan outlet to an approved place of disposal. Condensate shall not discharge into a street, alley or other areas so as to cause a nuisance. I.R.C. M1411.3

A secondary drain or auxiliary drain pan shall be required for each cooling or evaporator coil where damage to any building components will occur as a result of overflow from the equipment drain pan or stoppage in the condensate drain piping. Drain piping shall be a minimum of 3/4" nominal size. I.R.C. M1411.3.1

ENERGY NOTES:

IECC R402.2.4- The attic access door and crawlspace door from the conditioned space to unconditioned space shall be weather stripped and insulated to a level equivalent to the insulation on the surrounding surfaces.



NOTE:
9'-1 7/8" CEIL. HEIGHT TYP.

The builder/general contractor (construction professional) must carefully and thoroughly verify dimensions, validity, and overall integrity of the plans. In the event of a discrepancy, prior to construction, Creations West shall be contacted for clarification. At the time of construction, Creations West is relieved of liability and the builder/general contractor assumes full responsibility.

FLOOR PLAN GENERAL NOTES:
1. Plumbing wall 2x6 @ 16" o.c.
2. Attic access 22" x 30" with closer & a switched light in attic space. Location, if shown, is approximated.
3. Exhaust fan, 60 CFM run exhaust duct to the outside, & Provide 30" min. width for the water closet and 24" clear in front
4. Temp. wall and door
5. Vent dryer to outside with 4" metal ducting sealed and secured every 12', termination cap.
6. 12"X12" min. opening installed to provide access to circulation pump.
7. Sufficient access and working space (30" x 36") shall be provided around all electrical equipment.
8. 20 minute fire rated door
9. Backwater valve

GENERAL NOTES:

Compliance with codes and ordinances governing the work shall be made and enforced by the general contractor. General contractor shall verify all existing conditions and dimensions prior to construction. Note that all written dimensions take precedence over scale. Manufacturer's specifications for installation of materials shall be followed. Workmanship throughout shall be of the best quality of the trade involved and the general contractor shall coordinate the work of the various trades to expedite the job in a smooth and continuous process.

GENERAL BATHROOM NOTES:

Shower compartments shall have at least 900 sq. in. of floor area and be of sufficient size to inscribe a circle with a dia. not less than 30 in. Hinged shower doors shall open outward and have a minimum width of 22". The wall area above built-in tubs having installed shower heads and in-shower compartments shall be constructed as per Section R1024. Such walls shall form a watertight joint with each other and with either the tub, receptor or shower floor. Bathrooms, water closet compartments, and other similar rooms shall be provided with aggregate glazing area in windows of not less than 3 sq. ft., one half of which must be openable. (If no windows, a mechanical ventilation system shall be req.. The min. ventilation rates shall be 50 cfm, for continuous ventilation.
Showers & tubs shall have temperature-limiting device complying with IRC P2708.3

Toilet, bath and shower areas to be finished with a nonabsorbent surface in accordance with IRC R307

ALL exterior doors shall have a floor or landing on each side of the door. The floor or landing at a door shall not be more than 1.5 inches lower than the top of the threshold, if the door is not a req. exit door the landing shall not exceeded 8" from top of threshold. All landings shall be not less than 36" wide, measured in the direction of travel.

FIRE PROTECTION:

Provide 1/2" type "x" gyp. brd. on all the walls and ceilings of garage if no habitable space above. Provide 5/8" type "x" gyp. brd. on all the walls and ceilings of garage, if habitable space above garage. Nail @ 6" o.c.. All beams and structural members shall be protected with 5/8" gyp. brd.

Door between garage and house shall be 20 minute rated, solid core wood or "B" labeled door not less than 1 3/4" w/ self closer and self-latching. IRC R302.5

Protect enclosed usable space under stairs with 5/8" gyp. brd. Provide fire resistant construction on the underside of the stairs in accordance with IRC R302.6

Fire blocking at stud cavities that are greater than 8'-0".

Need to fire block all flue's, chases and dropped ceilings.

EXHAUST SYSTEM NOTES:

Dryer exhaust systems shall convey the moisture to the outdoors and shall terminate on the outside of the building. Screens shall not be installed at the duct terminal. Ducts shall have a back draft damper. The max. length of clothes dryer exhaust duct shall not exceed 25 feet from the dryer location to the wall or roof termination. The max. length of the ducts shall be reduced 2.5 feet for each 45 degree bend and 5 feet for each 90 degree bend. Metal ducting shall be sealed and secured every 12 feet.

FIREPLACES:

Where a factory-built chimney assembly incorporates offsets, no part of the chimney shall be at an angle of more than 30 degrees from vertical at any point in the assembly and the chimney assembly shall not include more than four elbows.

Chimneys shall extend at least 3 feet above the highest point where they pass through a roof of a building and at least 2 feet higher than any portion of a building within a horizontal distance of 10 feet.

Listing for any fireplace shou on plans shall be provided at mechanical inspection. In the event of a wood burning fireplace, submit listing showing EPA compliance. (IRC R1004.)

Hose connection back flow preventer shall be installed on the discharge side a hose threaded outlet.

Windows considered to be 0.35 U-Factor typical. U-Factors shall be be determined by testing in accordance with NFRC 100 and labeled as such by the manufacturer per section 1202.3 of the 2015 IECC.

Bottom of operable windows on upper floor to be no closer than 24" from floor in accordance with IRC R312.2.1

APPLIANCES IN ATTICS:
Attics containing appliances requiring access shall have an opening and a clear and unobstructed passageway large enough to allow removal of the largest appliance, but not less than 30 inches high and 22 inches wide and not more then 20 feet long when measured along the centerline of the passageway from the opening to the appliance. The passageway shall have continuous solid flooring in accordance with chapter 5 not less then 24 inches wide. A level service space at least 30 inches deep and 30 inches wide shall be present along all sides of the appliance where access is required the clear access opening dimensions shall be a minimum of 20 inches by 30 inches, where such dimensions are large enough to allow removal of the largest appliance. I.R.C. M1305.1.3

DRYER DUCT:
Dryer duct shall terminate outdoors and shall not exceed a total combined horizontal and vertical length of 35'. Maximum length of duct shall be reduced 2-1/2' for each 45° bend or 5' for each 90° bend. Duct shall be a min. nominal size of 4". I.R.C. M1502.4.4

CONDENSATE DISPOSAL:
Condensate from all cooling coils or evaporators shall be conveyed from the drain pan outlet to an approved place of disposal. Condensate shall not discharge into a street, alley or other areas so as to cause a nuisance. I.R.C. M1411.3

A secondary drain or auxiliary drain pan shall be required for each cooling or evaporator coil where damage to any building components will occur as a result of overflow from the equipment drain pan or stoppage in the condensate drain piping. Drain piping shall be a minimum of 3/4" nominal size. I.R.C. M1411.3.1

ENERGY NOTES:

IECC R402.2.4- The attic access door and crawlspace door from the conditioned space to unconditioned space shall be weather stripped and insulated to a level equivalent to the insulation on the surrounding surfaces.

FLOOR PLAN GENERAL NOTES:

1. Plumbing wall 2x6 @ 16" o.c.
2. Attic access 22" x 30" with closer & a switched light in attic space. Location, if shown, is approximated.
3. Exhaust fan, 60 CFM run exhaust duct to the outside. & Provide 30" min. width for the water closet and 24" clear in front
4. Temp. wall and door
5. Vent dryer to outside with 4" metal ducting sealed and secured every 12', termination cap.
6. 12"X12" min. opening installed to provide access to circulation pump.
7. Sufficient access and working space (30" x 36") shall be provided around all electrical equipment.
8. 20 minute fire rated door
9. Backwater valve

APPLIANCES ANCHORAGE NOTES:

Water heaters shall be anchored or strapped to resist horiz. movement. Strapping shall be at points within the upper one-third and lower one-third of the appliance's vert. dimensions. At the lower point, the strapping shall maintain a min. distance of 4 inches above the controls.

MECHANICAL GENERAL NOTES:

Mechanical contractor to provide combustion air to furnace area in accordance with local natural gas specifications. Combustion air to be brought into house from outside. 2-ducts provided, 1)placed at 12" above floor, and 1) placed at 12" below ceiling. Combustion air shall be supplied by two (2) VERTICAL openings, each with 1 sq. in. per 4,000 BTU/h of the total inputting rating of all appliances within the space.

OR

Combustion air shall be supplied by two (2) HORIZONTAL openings, each with 1 sq. in. per 3,000 BTU/h of the total input rating of all appliances within the space. One opening must be in the top 12" of room (IRC G2407.6.2)

Water heater seismic bracing. In Seismic Design Categories D, D-1, D-2 and townhouses in Seismic Design Category C, water heaters shall be anchored or strapped in the upper one-third and in the lower one-third of the appliance to resist a horizontal force equal to one-third of the operating weight of the water heater, acting in any horizontal direction, or in accordance with the appliance manufacture's recommendations. P2801.7 & IRC P2801.7

CONDENSATE DISPOSAL: Condensate from all cooling coils or evaporators shall be conveyed from the drain pan outlet to an approved place of disposal. Condensate shall not discharge into a street, alley or other area so as to cause a nuisance. I.R.C M1411.3

The mechanical room shall be enclosed, sealed and insulated in accordance with IECC N1102.4.4

WINDOW WELL NOTES

Window wells required for emergency escape and rescue shall have horizontal dimensions that allow the door or window of the emergency escape and rescue opening to be fully opened. The horizontal dimensions of the window well shall provide a min. net clear of 9 sq. ft. w/ a min. horizontal projection and width of 36 inches.
Window wells with a vertical depth greater than 44 inches below grade shall be equipped with a permanently affixed ladder or steps usable with the window in the fully open position.

GENERAL CONCRETE NOTES:

Basement walls, foundations and other concrete not exposed to the weather = 2,500 psi. Basement slabs and interior slabs on grade, except garage floor slabs = 2,500 psi. Basement walls, foundation walls, exterior walls exposed to the weather = 3,000 psi. Porches, carport slabs, and steps exposed to the weather, and garage floor slabs =3,500 psi.

Emergency floor drains at water heaters, laundries, garages, etc. req. a trap seal primer or deep seal trap. (Utah State Amendment to IPC Sec. 1002.4.1).

PERIMETER DRAINS / DAMP PROOFING:

Provide perimeter drains as required for foundation walls per IRC R405.1.
Provide damp proofing at the below-grade foundation walls per IRC R406.1.

FOUNDATION ELEVATION:

On graded sites, the top of any exterior foundation shall extend above the elevation of the street gutter at point of discharge or the inlet of an approved drainage device a minimum of 12 inches (305mm) plus 2%. Alternate elevations are permitted subject to the approval of the building official, provided it can be demonstrated that required drainage to the point of discharge and away from the structure is provided at all locations on the site. (R403.1.7.3)

GEO-TECH ENGINEER:

Geo-Tech Engineer must inspect excavation prior to any fill or concrete being placed. Geo-tech shall provide a letter to a contractor prior to footing inspection.

MINIMUM HEIGHT:

Basement hallways, bathrooms, toilet rooms, laundry rooms, or any non-inhabitable area at basements shall have a ceiling height of not less than 6'-8".

CONCRETE OR MASONRY FOUNDATIONS:

Drains shall be provided around all concrete or masonry foundations that retain earth and enclose habitable or usable spaces located below grade. Drainage tiles, gravel or crushed stone drains, perforated pipe or other approved systems or materials shall be installed at or below the area to be protected and shall discharge by gravity or mechanical means into an approved drainage system.

All 125V 15-20 AMP receptacles installed inside or outside of dwelling shall be listed as tamper resistant.

CONCRETE FTG'S UNDER ALL FOUNDATION WALLS, BEARING WALLS AND POSTS

NOTE: ALL FOOTINGS 20" F-20

NOTE: THIS ENGINEERING ASSUMES THAT THE CLEARANCE + SETBACK REQUIREMENTS LISTED IN IRC SECTION R403.1.7 ARE MET. IF THESE PROVISIONS ARE NOT MET, CONTACT THE ENGINEER FOR FURTHER DESIGN.

NOTE: THIS ENGINEERING ASSUMES THAT THE SITE IS STABLE HAVING NO GLOBAL STABILITY CONCERNS OR HAZARDS. IF THIS IS NOT TRUE, CONTACT SOILS ENGINEER AND PROVIDE SOILS/SLOPE STABILITY REPORT TO YORK ENGINEERING FOR REVIEW AND FURTHER DESIGN.

   B. UNBALANCED BACKFILL DOES NOT EXCEED 4'-0".
5. TITEN HD BOLTS OR EPOXY THREADED RODS MAY BE SUBSTITUTED FOR J-BOLTS OF SAME SIZE AND SPACING. USE 6" TITENS FOR SINGLE SILL PL., USE 8" FOR DBL SILL PL.
6. ATTACH SILL PLATE TO FLOOR JOISTS/BLOCKING W/ A34 CLIP PER DETAILS.
7. PERIODIC SPECIAL INSPECTIONS REQUIRED ON 11'-1" TO 12'-0" FOUNDATION WALLS.

FOOTING SCHEDULE:

TYPE	WIDTH	LENGTH	THICK	REINFORCEMENT
F-16	16"	CONT.	10"	(2) # 4 BARS CONT.
F-18	18"	CONT.	10"	(2) # 4 BARS CONT.
F-20	20"	CONT.	10"	(2) # 4 BARS CONT.
F-24	24"	CONT.	10"	(3) # 4 BARS CONT.
F-30	30"	CONT.	10"	(3) # 4 BARS CONT.
F-36	36"	CONT.	10"	(4) # 4 BARS CONT.
S-24	24"	24"	10"	(3) # 4 BARS EACH WAY
S-30	30"	30"	10"	(3) # 4 BARS EACH WAY
S-36	36"	36"	10"	(4) # 4 BARS EACH WAY
S-42	42"	42"	12"	(5) # 4 BARS EACH WAY
S-48	48"	48"	12"	(6) # 4 BARS EACH WAY
S-60	60"	60"	12"	(7) # 4 BARS EACH WAY

NOTE: FOOTING REINFORCEMENT IN THIS SCHEDULE AND NOTED ON PLANS IS BOTTOM REINFORCING U.N.O. AND SHALL BE PLACED IN BOTTOM 1/2 OF FOOTING THICKNESS, WITH 3" CONCRETE CLEAR COVER, MIN.

FOOTING, FOUNDATION AND CONCRETE

1. FOOTING DESIGN IS BASED ON ALLOWABLE SOIL BEARING PRESSURE OF 1500 PSF U.N.O.. SEE PLAN. IF A PROJECT SOILS REPORT HAS BEEN COMPLETED, FOLLOW ALL REPORT RECOMMENDATIONS. FOOTINGS SHALL BEAR ON UNDISTURBED SOIL OR GRANULAR FILL COMPACTED TO 95% OF MAXIMUM DENSITY. NO FOOTINGS SHALL BE PLACED IN WATER OR ON FROZEN GROUND. ALL FOOTINGS TO BE PLACE AT MIN. BELOW LOCAL FROST DEPTH, AND BE CONTINUOUS AND MONOLITHIC POUR.

2. CHANGES IN ELEV. SHALL BE STEPPED WITH STEP HEIGHT NOT HIGHER THAN 1/2 THE STEP LENGTH AND NOT GREATER THAN 5'. NOTIFY ENGINEER IF GRADE DROPS OVER 8' IN 24' (GREATER THAN 1/3 SLOPE) SO THAT APPROPRIATE DESIGN CHANGES MAY BE MADE TO FOUNDATION AND FOOTINGS.

3. ALL FOOTINGS, FOUNDATIONS, AND INTERIOR SLABS SHALL BE NORMAL WT. CONCRETE WITH A COMPRESSIVE STRENGTH OF 2,500 PSI MIN. U.N.O. TO MEET STRENGTH REQUIREMENTS (SEE CALCS., NO SPECIAL INSPECTIONS REQUIRED U.N.O., SEE PLAN) HOWEVER, PER IRC 402.2 USE 3000 PSI CONCRETE FOR DURABILITY PURPOSES. THE WATER/CEMENT RATIO SHALL BE NO GREATER THAN .50 WITH A MINIMUM CEMENT CONTENT OF 504 LBS. PER CUBIC YARD.

4. ALL CONC. WORK SHALL BE PLACED, CURED, STRIPPED, AND PROTECTED AS REQUIRED BY ACI STANDARDS AND PRACTICES.

5. ALL REINFORCING SHALL BE DETAILED AND PLACED IN ACCORDANCE WITH ACI STANDARD 318. REINFORCEMENT SHALL BE FREE FROM MUD AND OIL AND OTHER NON-METALLIC COATINGS THAT HAMPER BONDING CAPACITY.

6. OWNER\CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS LISTED ON THE DRAWING. VERIFICATION OF ALL SITE CONDITIONS INCLUDING SITE STABILITY IS THE RESPONSIBILITY OF OTHERS

7. ALLOW 14 DAYS FOR CONCRETE TO CURE PRIOR TO BACKFILL.

8. STRUCTURAL CONCRETE EXPOSED TO FREEZE THAW CYCLES SHALL HAVE 5% AIR ENTRAINMENT, MIN.

9. RUN FOOTINGS CONTINUOUS UNDER ALL DOOR OPENINGS, SEE PLAN.

10. SILL PLATE J-BOLTS SHALL BE A307 WITH 7" MIN. EMBEDMENT IN CONCRETE U.N.O., SEE PLAN.

FOOTING, FOUNDATION AND CONCRETE

10. SILL PLATE J-BOLTS SHALL BE A307 WITH 7" MIN. EMBEDMENT IN CONCRETE U.N.O., SEE PLAN.

11. TITEN HD BOLTS OR EPOXY THREADED RODS MAY BE USED AS SUBSTITUTION FOR SILL PLATE J-BOLTS AT SAME SIZE AND SPACING AS J-BOLTS. USE 6" TITEN HD FOR SINGLE SILL PLATE AND 8" TITEN HD FOR DBL PLATE.

12. ALL FOUNDATION HOLDOWN STRAPS/ANCHORS SHALL BE ALIGNED WITH END OF SHEAR WALL ABOVE AND SHALL ATTACH TO FULL HEIGHT KING STUDS U.N.O., SEE PLAN. PROVIDE WOOD POST AT EACH HOLDOWN PER THE HOLDOWN SCHEDULE. DIMENSIONS TO HOLDOWN LOCATIONS MUST BE FIELD VERIFIED.

13. FOOTINGS TO BE CENTERED ON WALLS AND COLUMNS/POSTS U.N.O., SEE PLAN.

14. USE SIMPSON SET-XP EPOXY FOR CONCRETE ANCHORS U.N.O., SEE PLAN. CONTINUOUS SPECIAL INSPECTIONS REQUIRED ON ALL EPOXY OPERATIONS UNLESS WAIVED BY ENGINEER AND THE BUILDING OFFICIAL.

15. LAP REBAR 48 BAR DIAMETERS U.N.O., SEE PLAN. REINFORCING IN SLABS ON GRADE MAY BE LAPPED 24". SPLICES IN BOTTOM STEEL IN CONCRETE BEAMS AND CAST IN PLACE SUSPENDED SLABS SHALL BE STAGGERED 48 BAR DIAMETERS.

16. LINTELS IN CONCRETE WALLS MAY BE AS FOLLOWS U.N.O., SEE PLAN: FOR 3'-0" MAX SPAN, 8" DEEP WITH (2) #4 BOTT. BARS, FOR 6'-0" MAX SPAN, 12" DEEP WITH (2) #4 BOTT. BARS.

17. PROVIDE (2) EDGE BARS ABOVE CONCRETE WALL OPENINGS AND (1) BAR EACH SIDE AND BELOW OPENINGS U.N.O., SEE PLAN. MATCH SIZE OF EDGE BARS WITH TYPICAL WALL REINFORCING AND PLACE WITHIN 4" OF OPENING EDGE. EXTEND BARS 48 BAR DIAMETERS PAST EDGE OF OPENING OR EXTEND AS FAR AS POSSIBLE AND PROVIDE 90° STANDARD HOOK AT END.

18. PROVIDE HORIZONTAL BAR WITHIN 3" OF TOP AND BOTT. OF WALL AND PROVIDE VERTICAL BAR AT ALL WALL CORNERS AND ENDS.

NOTE:
7'-9" CEIL. HEIGHT TYP.
7'-10" FOUND WALL
DOUBLE PLATE (3")
2X6 EXTERIOR WALLS (5 1/2")
8" FOUND. WALLS U.O.S.
4" FOUND. FUR WALLS U.O.S.
WINDOWS SET @ 6'-8" TYP
DOOR HEIGHT 6'-8" TYP.

Subject: Geotechnical Response to Review Comments
Proposed South Weber Gateway
About 2445 East South Weber Drive
South Weber, Utah
CMT Project Number: 900166

Mr. Brown,

Recently, an engineering review was been completed for submitted documents for the proposed development by the City Engineer (Jones and Associates). Included in the submitted documents was the Geotechnical report[1] completed for the project by CMT. A follow up memorandum was presented with review comments which included two comments related to the geotechnical report and were listed under the heading "General"- item E3. These comments were as follows:

A. *It appears that one of the slope stability tests did not meet the minimum factor of safety (see pg. 18 and figure No. 15 in the appendix). This needs to be addressed.*

B. *Sensitive Lands Development Regulations (City Code 10-14). Although the geotechnical report addresses some of the items listed in the code, a report needs to be provided that specially demonstrates how the development is compliant with this section of the code.*

Response

Item A:

As part of the slope stability analysis, and to evaluate the slope stability under seismic (pseudostatic) conditions, peak horizontal accelerations (adjusted for site class) were queried for the site. For this the methods provide by Bray, J.D., & Travasarou, T., [2] were utilized having a maximum allowable deformation of 6.5 inches to calculate the horizontal ground acceleration of 0.185*g* as the pseudostatic coefficient for the stability analysis. When utilizing less deformation in our analyses, the safety factor was less than the minimum 1.0 with all failures roughly within the upper about 4 feet of clay/silt soil depicted. This method of analyzing

[1] "Geotechnical Engineering Study, Proposed South Weber Gateway, About 2445 East South Weber Drive. South Weber, Utah, CMT Project No. 900166 Dated September 17, 2021.
[2] Bray, J.D., & Travasarou, T., [2] Pseudo static coefficient for use in Simplified Seismic Slope Stability Evaluation, "Journal of Geotechnical and Geoenvironmental Engineering, ASCE, September 2009, P 1336-1340.

seismic deformation as it relates to seismic pseudostatic conditions is often utilized in design and has been readily accepted by many Utah municipalities.

The value shown with a seismic factor of safety less than 1.0 was for a calculated acceleration using the prior mentioned method with a shallow (4 feet or less below the surface) slope deformation of 4 inches. The purpose of showing this stability information in the table on page 18 and the graphical interpretation on Figure 16 of the report was to provide a minimal range of deformation to associated acceleration. It is our opinion that the maximum of 6.5 inches of deformation within the upper about 4 feet along the open slope face is reasonable with respect to property and life safety of the planned development as well as the associated acceleration is low enough to meet the minimum required seismic factor of safety.

Item B:

The site property is located with the confines of the South Weber Title 10 Zoning Regulations Chapter 14 Sensitive Lands overlay Map (10-14-3- Sensitive Lands overlay map). This map specifies areas of the city which are development sensitive for various defined reasons.

The Geotech report addresses many of these sensitive issues such as slope stability (see section **7.0 Slope Stability Analysis**), geologic hazards items including; faulting (see section **4.2 Faulting**), liquefaction (see section **4.3.3 Liquefaction**), local geologic mapping with discussion of landslide deposits or features, lateral spread deposits, debris flow, stream flooding, and rock fall hazard areas (see section **4.4 Other Geologic Hazards**). It is our opinion these items will not impact the development and need no further evaluation.

A Phase 1 Environmental Site Assessment was completed by CMT in general conformance with ASTM Standard E1527-13 for the site property, dated August 27 2021 (attached). The assessment indicated that "*none of the identified, regulate sites/facilities appear to represent an REC in relation to the Subject Property at the time of this assessment. Interview/records requested of government agency/department officials revealed no other known or suspected recognized environmental conditions (RECs) historical recognized conditions (HRCs), or controlled recognized environmental conditions (CRECs) in connection with the subject property.*" See report executive summary of attached report.

CMT did not identify any anomalies of the terrain or characteristics of the geological materials which may potentially impact the planned site use.

Groundwater was not observed within our exploration which extended to a depth of 31.5 feet and is not anticipated to adversely affect proposed construction or the site.

Dense brush is another sensitive land criterion. It is our understanding that the majority of the site is presently utilized as pasture land. The slope to the south with homes at the top of the slope is vegetated with some native brush, but will not be significantly disturbed as part of the development process. Similarly, the existing pasture land and minimal planned disturbance of the site slopes presents a low risk to wildlife habitat.

Closure

This addendum must be attached to the original geotechnical report. All other recommendations provided in the report remain applicable.

We appreciate the opportunity to work with you on this project. If we can be of further assistance or if you have any questions regarding this project, please do not hesitate to contact us at (801) 590-0394.

Sincerely,
CMT Engineering Laboratories

August 27, 2021

EXECUTIVE SUMMARY

CMT Engineering Laboratories has completed a Phase I Environmental Site Assessment for the Subject Property located in South Weber, Utah. This Phase I Environmental Site Assessment was performed in general conformance with the scope and limitations of ASTM Standard E 1527-13. The Subject Property consists of a single parcel with the following Davis County Parcel ID Number: 130340068. The parcel is approximately 10.73 acres. The Subject Property is currently vacant, undeveloped land; 7800 South is located on the southern portion of the subject property. Vegetation consists of ankle to shin-high weeds and grasses. Mature trees are located on the southern portion of the subject property. The northern portion is utilized for agricultural purposes.

Historical uses of the Subject Property include agricultural use. The Subject Property was occupied by a farmer named Adolf Fernelius prior to the 1940's. The subject property was purchased by Farrell Poll's (current trustee) father in the 1940's. Since then, the Subject Property has remained relatively unchanged.

Our review of current State and Federal environmental databases, engineering control registries, and institutional control registries, and a Database Report prepared by ERIS Information Inc., identified 22 regulated sites or facilities within the required search radii of the Subject Property (Sections 8.1 and 8.2). Based on the nature of the database listing, site/facility conditions, elevation, and/or distance from the Subject Property, none of the identified, regulated sites/facilities appear to represent an REC in relation to the Subject Property at the time of this assessment. Interviews/records requests of government agency/department officials revealed no other known or suspected recognized environmental conditions (RECs), historical recognized conditions (HRECs), or controlled recognized environmental conditions (CRECs) in connection with the Subject Property (Section 9.0).

Based on the observations, research, and interviews conducted while performing this assessment, we did not identify any RECs, HRECs, or CRECs in connection with the Subject Property or adjacent, surrounding properties.

DATA GAPS

No city or county officials or departments responded to a records request within the timeframe of this assessment. If a response is received after this Phase I ESA is submitted which changes the conclusion of this report, an addendum will be submitted.

It is CMT's conclusion that the above listed data gaps do not affect our ability to reach a conclusion regarding the condition of the subject property and the presence of RECs in relation to the property. No other significant data gaps that would alter the findings and conclusions of this report where encountered.

APPENDICES

1.0-INTRODUCTION

CMT Engineering Laboratories was retained by Colliers International to conduct a Phase I Environmental Site Assessment (ESA) for the property at about 2445 East South Weber Drive, South Weber, Utah. The site will be referred to herein as the Subject Property.

The purpose of the Phase I ESA is to evaluate the conditions on the Subject Property and adjoining properties related to current or historical site uses in order to identify the presence or likely presence of any Recognized Environmental Conditions (RECs) in connection with the property or adjoining properties.

Recognized environmental conditions are defined by the American Society for Testing and Materials' (ASTM) Standard E 1527-13 as "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions inductive of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions"

As defined in the ASTM Standard, a de minimis condition is "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

ASTM Standard E 1527-13 also includes the designation of Controlled REC (CREC). As defined in the ASTM Standard a CREC is "A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

Historical RECs (HRECs) are defined in the ASTM Standard as "A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to environmental controls. The final decision on whether

a past release is an HREC rests with the environmental professional (EP), and will be influenced by the current impact of the past release to the Site."

The Phase I ESA meets the requirements of the United States Environmental Protection Agency's (US EPA) Appropriate Inquiries (AAI) Rule (2005) and the Comprehensive Environmental Response Compensation and Liability Act (CERCLA) (1980) (Also known as Superfund). Meeting the requirements of the AAI Rule allows for qualification of landowner liability protection (LLP) under the CERCLA Brownfield Amendments (2002). The American Society for Testing and Materials (ASTM) has published the *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* as Standard Designation E 1527-13. This standard meets the AAI requirements which became effective on November 6, 2013.

The Subject Property is found at Latitude: 41.126161° N and Longitude: -111.916991° W. The location of the Subject Property is shown on **Figure 1,** below.

FIGURE 1, VICINITY MAP

2.0-OBJECTIVES

2.1 Scope of Work

The purpose of the Phase I Environmental Site Assessment (ESA) is to evaluate the conditions on the Subject Property and adjoining properties related to current or historical site uses in order to identify the presence or likely presence of any Recognized Environmental Conditions (RECs) in connection with the property or adjoining properties. At a minimum, the Phase I ESA typically includes a review of publicly available, reasonably ascertainable, and practically reviewable environmental records and historical data, a reconnaissance of the Subject Property and surrounding properties, interviews with property owners, site managers, and/or occupants, and interviews with pertinent government officials to assess the presence or the potential presence of recognized environmental conditions at the Subject Property.

This Phase I ESA is generally consistent with the current ASTM Standard (ASTM E 1527-13) and industrial accepted standards as defined within the following scope-of-work:

1. Conduct an on-site, non-intrusive/non-analytical reconnaissance of the Subject Property and a limited reconnaissance of adjoining, surrounding properties. The reconnaissance is performed by a qualified and experienced geologist or engineer from CMT Engineering Laboratories.

2. Review and interpret a limited number of historical aerial photographs, historical topographic maps, and, when available, city directories, and historical fire insurance maps that include the location of the Subject Property in order to evaluate historical site usage.

3. Research available geological and hydrological data for the location of the Subject Property and vicinity.

4. Conduct a comprehensive review of the most recent Federal and State environmental databases and control registries relative to the Subject Property and surrounding properties within the ASTM E 1527-13 recommended search radius from the Subject Property. CMT Engineering Laboratories contracts with ERIS Information Inc. to conduct searches of Federal and State environmental databases and control registries and to provide a Database Report of the search findings. CMT also performs searches of available State and Federal databases through various State of Utah Department of Environmental Quality (DEQ) and Federal Environmental Protection Agency

(EPA) internet sites. At a minimum, Federal National Priorities Lists (NPL); Subject Property, 1-mile radius of property, and the following databases and control registries are reviewed:

- Comprehensive Environmental Response Compensation and Liability Index System (CERCLIS) lists; Subject Property and 0.5-mile radius of property
- Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) Treatment, Storage, Disposal facilities (TSD) list; Subject Property and 1-mile radius of property
- Resource Conservation and Recovery Act (RCRA) non-Corrective Action Report (non-CORRACTS) Treatment, Storage, Disposal facilities (TSD) list; Subject Property and 0.5-mile radius of property
- Resource Conservation and Recovery Act (RCRA) Generators list; Subject Property and 0.25-mile radius of property
- Utah Landfill Inventory List; Subject Property and 0.5-mile radius of property
- Utah Underground Storage Tank (UST) and Above Ground Storage Tank (AST) Sites lists; Subject Property and 0.25-mile radius
- Utah Leaking Underground Storage Tank (LUST) and Leaking Above Ground Storage Tank (LAST) Sites lists; Subject Property and 0.5-mile radius of property
- Utah SPILLS (reported petroleum and hazardous materials releases) list; Subject Property

A number of other databases and control registries are reviewed for the Subject Property and surrounding properties within required search distances as part of the ERIS Information Inc. Database Report. A complete list of the databases and control registries reviewed is included in the ERIS Information Inc. Database Report in **Appendix C**.

5. Conduct an assessment of potential vapor migration/ encroachment at the Subject Property.

6. Conduct interviews of current and/or past property owners, managers, or occupants concerning the present and past site usage, conditions, and events at the Subject Property.

7. Conduct interviews of, or submit information requests to, pertinent government and regulatory officials, agencies, and departments concerning present and past site usage, conditions, and events at the Subject Property and surrounding areas.
8. Provide a summary of the findings of our assessment and any pertinent conclusions and opinions pertaining to our findings.

2.2 Limitations of Assessment

CMT Engineering Laboratories has performed this assessment with the usual care and thoroughness of a consulting professional based on the scope-of-work, limits of time, cost, and publicly available, reasonably ascertainable, and practically reviewable information. We have made no attempt to determine the marketability of the Subject Property or its suitability for any particular use, and such a determination should not be inferred based solely on this report. The information and findings presented in this report is not, and should not be, considered a warranty regarding the presence or non-presence of recognized environmental conditions in connection with the Subject Property.

The presence of RECs in connection with the subject property may warrant additional investigation or studies to better evaluate and classify Subject Property conditions and determine potential environmental liabilities on property owners, occupants, or operators.

The historical information sources researched for this Phase I Environmental Site Assessment revealed the uses of the Subject Property from the present back to 1937 (historical aerial photographs). This meets the 1940-minimum research limit per the ASTM Standard E 1527-05 § 8.3.2.

The Phase I ESA does not address the following Non-ASTM E 1527-13 scope items:

- Asbestos-containing building materials
- Lead based paint
- Naturally occurring radon
- Lead in drinking water
- Wetlands
- Regulatory compliance
- Cultural and historical resources
- Ecological resources
- Endangered species
- Indoor air quality
- Biological agents
- Mold
- PCB Light Ballasts
- Environmental Lien Search

- Industrial hygiene
- Health and safety
- Chain of Title Report

The evaluation of any of the above listed considerations is beyond the scope of this assessment and would require additional assessment by an appropriate, qualified professional.

This assessment has been non-intrusive and non-analytical in nature which is typical of a Phase I Environmental Site Assessment. Therefore, CMT Engineering Laboratories makes no claims relative to surficial or subsurface conditions in relation to the Subject Property or in relation to conditions which would require analytical testing to evaluate. It is understood that a Phase I ESA, such as the one reported herein, does not and cannot eliminate all of the environmental risks and liabilities associated with the Subject Property. This report consists of our professional opinions made in accordance with the procedures and principles as outlined in ASTM E1527-13. This warranty is in lieu of all other warranties either expressed or implied.

2.3 Reliance

A Phase I ESA performed in accordance with ASTM E1527-13 and completed less than 180 days prior to the date of acquisition or date of intended transaction is presumed to be valid. After 180 days, or if additional information becomes known, or if significant, pertinent changes occur to the conditions of the Subject Property, then all or portions of the environmental site assessment may need to be updated prior to the date of acquisition or date of intended transaction. After one year of the date of this report, the assessment should be considered void and should not be relied upon. After one year of the date of this report, a new Environmental Site Assessment of the Subject Property would be required.

This report is prepared for the sole use and benefit of Colliers International and their duly-authorized representatives, affiliates, and assigns, and may not be relied upon by any other person or entity without the written authorization (reliance letter) of CMT Engineering Laboratories.

2.4 Commonly Used Acronyms

The Following list contains some of the commonly used acronyms used in this report and supporting documentation. The list is not considered to be all inclusive.

AST	Above Ground Storage Tank

CERCLA	Comprehensive Environmental Response, Compensation and Liability Act
CERCLIS	CERCLA Information System
CREC	Controlled Recognized Environmental Condition
CWA	Clean Water Act
DERR	Division of Environmental Remediation and Response (UDEQ)
ERNA	Emergency Response Notification System
EWA	Enforceable Written Assurances
FINDS	Facility Index System/Facility Registry System
FIFRA	Federal Insecticide, Fungicide, & Rodenticide Act
FTTS	FIFRA/TSCA Tracking System
HIST FTTS	Historical FTTS
HREC	Historical Recognized Environmental Condition
ICIS	Integrated Compliance Information System
NPDES	National Pollutant Discharge Elimination System
LUST	Leaking Underground Storage Tank
NFA	No Further Action
RCRA	Resource Conservation and Recovery Act
RCRA-CESQG	RCRA Conditionally Exempt Small Quantity Generator
RCRA-NONGEN	RCRA Non-Generator
RCRA-SQG	RCRA Small Quantity Generator
RCRA-LQG	RCRA Large Quantity Generator
RCRA TSDF	RCRA Treatment, Storage and Disposal Facilities
REC	Recognized Environmental Condition
TRIS	Toxic Chemical Release Inventory System
TSCA	Toxic Substance Control Act
UDEQ	Utah Department of Environmental Quality
U.S. EPA	United States Environmental Protection Agency
UST	Underground Storage Tank

3.0-PREVIOUS REPORTS

CMT Engineering was not provided copies of any previous environmental assessment reports for the Subject Property and we are not aware of any such reports.

4.0-SITE DESCRIPTION

4.1 Location

The Subject Property is located at about 2445 East South Weber Drive, South Weber, Utah. The location of the Subject Property is shown on **Figure 1**. The Subject Property consists of a single parcel with the following Davis County Parcel ID Number: 130340068. The parcel is approximately 10.73 acres. The approximate boundaries of the entire Subject Property are shown on **Figure 2** on the following page.

FIGURE 2, SITE MAP

4.3 Current Property Use

The Subject Property is currently vacant, undeveloped land; 7800 South Street crosses the southeastern portion of the subject property. Vegetation consists of ankle to shin-high weeds and grasses. Mature trees are located on the southern portion of the subject property. The northern portion is utilized for agricultural purposes. Several photographs of the Subject Property and adjacent areas are included in **Appendix A**.

4.4 Structural Description

No structures were observed on the subject property.

4.5 Neighboring Properties

The current uses of the surrounding, adjacent properties is as follows:

North: South Weber Drive followed by Staker Parson Companies gravel pit area.

East: A single family residential structure, High Mark Charter School, and associated out-buildings, athletic fields, and parking areas.

South: A single-family residential subdivision.

West: A single-family residential subdivision.

5.0-SITE RECONNAISSANCE

5.1 Methodology

A reconnaissance of the Subject Property and adjacent, surrounding properties was conducted on August 25, 2021. The weather conditions at the time of the reconnaissance were mostly clear with a temperature of approximately 95 to 100 degrees (F). The purpose of the reconnaissance was to visually observe the Subject Property and adjacent properties for evidence of potential or actual recognized environmental conditions (RECs). The reconnaissance was non-intrusive and non-analytical in nature. A summary of the observed conditions on the Subject Property and adjacent, surrounding properties was documented in an inspection checklist which is included in **Appendix A**.

5.2 Observations

5.2.1 Proposed Construction and Materials

It is anticipated that future construction on the Subject Property will be of typical wood or steel-frame construction with concrete foundations and asphalt-paved parking areas and/or roads along with landscaped areas/yards.

5.2.2 Utilities

It is anticipated that the future development on the property will be serviced by typical municipal and private utilities.

5.2.3 Hazardous Substances and Petroleum Products

No hazardous substances or petroleum products were observed on the Subject Property.

5.2.4 Staining

No evidence of surface staining was observed during the site reconnaissance of the subject property.

5.2.5 Storage Tanks

No evidence of an underground storage tank (UST) or an above ground storage tank (AST) was observed during the site reconnaissance or within the Utah Department of Environmental Quality's (UDEQ) interactive UST data map. See Section 8.1, On-Site Environmental Conditions, for more details.

5.2.6 Asbestos Containing Materials (ACMs)

No structures that could contain ACMs were observed on the Subject Property.

5.2.7 Odors

No unusual odors that could be attributed to hazardous substances or petroleum products were encountered at the Subject Property.

5.2.8 Pools, drains, or Sumps

No pools, drains, or sumps were observed on or adjacent to the Subject Property.

5.2.9 Unidentified Substance Containers

No unidentified containers of any type were observed on or adjacent to the Subject Property.

5.2.10 Polychlorinated Biphenyls (PCBs)

No potential sources that could contain PCBs were observed on or adjacent to the Subject Property.

5.2.11 Pits, Ponds, or Lagoons

No pits, ponds, or lagoons were observed on or adjacent to the Subject Property.

5.2.12 Stressed Vegetation

No stressed vegetation was observed on or adjacent to the Subject Property.

5.2.13 Solid Waste

During the site reconnaissance, a minor amount of windblown refuse and debris was observed on the Subject Property. The areas around the debris appeared to be clean and free of staining and these conditions do not represent a REC.

5.2.14 Septic Systems

No evidence of a septic system was observed on the property.

6.0-PAST SITE LAND USE

The history of the Subject Property has been assessed by reviewing a limited number of historic aerial photographs, historical topographic maps, historic city directories, Sanborn Fire Insurance Maps, and a review of Davis County Parcel assessor's maps where available.

6.1 Property Information

The Subject Property is comprised of a single parcel. The parcel information below was identified on the Davis County parcel assessor's website:

PARCEL NO	ADDRESS	ACRES	OWNER
130340068	NULL	10.73	POLL, JANE M - TRUSTEE

6.2 Fire Insurance Maps

A Fire Insurance Map Report prepared by ERIS Information Inc. indicates that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied Subject Property information. Sanborn fire insurance maps were typically produced from the late 1800s to the 1950s and, in some areas, more recently. When no mapping is available for a location, it typically indicates that the location had sparse to no development at the time the mapping was completed. The Subject Property is an unmapped property. A copy of the Fire Insurance Maps report prepared by ERIS Information Inc. is included in **Appendix B**.

6.3 Aerial Photographs

An aerial photo decade report was provided by ERIS Information Inc. The following historical aerial photograph years that include the location of the Subject Property were reviewed: 1937, 1953, 1963, 1975, 1981, 1993, 1997, 2006, 2009, 2011, 2014, 2016, and 2018. Our observations and interpretations of the photographs are summarized below:

1937: The aerial indicates that the subject property and adjoining properties were vacant, undeveloped land. It appears that the subject property was utilized for agricultural purposes. Bambrough Canal is located along the southern portion of the subject property.

1953: The aerial indicates a gravel pit was now located beyond to the northeast.

1963: The aerial indicates relatively no change from the previous imagery.

1975: The aerial indicates that the gravel pit extended closer to the northern boundary of the subject property.

1981: The aerial indicates relatively no change from the previous imagery.

1993: The aerial indicates that residential development had begun to the south.

1997: The aerial indicates relatively no change from the previous imagery.

2006: The aerial indicates that additional residential subdivisions to the south and southwest, along with South Weber Drive to the North, had been constructed.

2009: The aerial indicates that additional residential structures to the southwest had been constructed.

2011: The aerial indicates relatively no change from the previous imagery.

2014: The aerial indicates that a school to the east had been constructed.

2016: The aerial indicates that additional residential structures to the southwest had been constructed.

2018: The aerial indicates that additional residential structures to the southwest had been constructed. Since 2018, the site and surrounding properties have remained relatively unchanged.

The ERIS Information Inc. Historical Aerials report reviewed for this assessment is included in **Appendix B**.

6.4 Topographic Maps

CMT Engineering Laboratories reviewed and interpreted readily available historical topographic maps that include the location of the Subject Property and surrounding areas. The maps reviewed include the U.S. Geological Survey, "Kaysville, Utah" and "Ogden, Utah" 7.5 Minute Topographic Maps dated 1955, 1969, 1975, 1986, 1992, 1998, and 2017. A summary of the observations of the reviewed maps is provided below.

1955: The map indicates that the subject property and adjoining properties were vacant, undeveloped land Bambrough Canal is located along the southern portion of the subject property. A gravel pit is located beyond to the northeast.

1969: The map indicates relatively no change from the previous map.

1975: The map indicates that the gravel pit has extended closer to the northern boundary of the subject property.

1983: The map indicates relatively no change from the previous map.

1992: The map indicates residential development was located to the south.

1998: The map indicates that additional residential development was located to the south.

2017: The map indicates that South Weber Drive to the north was constructed.

The ERIS Information Inc. Historical Topographic Maps reviewed for this assessment are included in **Appendix B**.

6.5 City Directories

A search was made by ERIS Information Inc. of published City Directories for the site and surrounding vicinity. No listings for the subject property address were identified within the City Directories. Several commercial and residential listings were identified along South Weber Drive and View Drive. A copy of the City Directories Report prepared by ERIS Information Inc. is included in **Appendix D**.

7.0-GEOLOGIC AND HYDROLOGIC EVALUATION

7.1 Subsurface

A physical setting report prepared by ERIS Information Inc. is included in **Appendix D**. The report contains a geologic map that shows the geology at the subject site and surrounding areas to be Quaternary alluvium and colluvium (Unit Qa) dated as Quaternary. Soils mapped at the site are classified as "Ackmen loam, 1 to 3 percent slopes" (Soil Unit AbB), "Kidman fine sandy loam, 0 to 1 percent slopes" (Soil Unit KbA), "Kilburn stony sandy loam, 0 to 3 percent slopes" (Soil Unit KcA), and "Pleasant View loam, 1 to 3 percent slopes" Soil Unit (PvB). The FEMA-designated potential flood hazard zone for the site and surrounding areas is mapped as "X-12, Areas of minimal flood hazard." A ditch or stream crossing the southern portion of the property from east to west is mapped as a freshwater emergent wetland.

7.2 Hydrology

An investigation of groundwater levels and flow direction at the Subject Property is beyond the scope of this assessment. Regional groundwater flow is inferred to be generally toward the west at the location of the property based on topography. However, regional and local groundwater flow directions and elevations are likely significantly influenced by precipitation, irrigation, surface drainage, variations in topography, and variations in subsurface geology. There is a potential for seasonal fluctuations in groundwater flow directions and groundwater levels at the location of the Subject Property.

7.3 Water Wells and Water Service

A physical setting report prepared by ERIS Information Inc. is included in **Appendix D**. The report indicates that no well sources are located adjacent to or within the boundary of the subject property.

7.4 Oil and Gas Wells

A physical setting report prepared by ERIS Information Inc. is included in **Appendix D**. The report indicates that no oil and gas well sources are located adjacent to or within the boundary of the subject property.

8.0-FEDERAL AND STATE DATABASE REVIEW

Current Federal and State environmental databases, engineering control registries, and institutional control registries, including: NPL, CERCLIS, RCRA, LUST, UST, and Utah Landfill Inventory, were reviewed in order to assess potential environmental liabilities associated with the Subject Property and/or properties within a specified search radius. For a comprehensive summary of findings refer to ERIS Information Inc. Database Report in **Appendix C**. Detailed explanations of the databases and control registries searched are also included in the Database Report. In addition to the ERIS Information Inc. Database Report, CMT Engineering conducted a search of available Utah DEQ databases through their internet web site.

The following sections list the mapped, regulated sites/facilities that were found during the search of available ("reasonably ascertainable") environmental and control registry records either on the Subject Property or within the required ASTM E1527-13 search radius from the Subject Property.

8.1 On-Site Environmental Conditions

No regulated sites or facilities were identified within the boundary of the Subject Property.

8.2 Off-Site Environmental Conditions

The table below lists the regulated sites or facilities that were identified within the required search radii of the Subject Property.

ACRONYM	FACILITY	STREET	DISTANCE (miles)	DIRECTION	REC
FINDS/FRS	GENEVA ROCK PRODUCTS SOUTH WEBER PIT	2635 E SOUTH WEBER DRIVE	0.006447991	WNW	NO

No unplottable sites were identified within the Database Report.

The Facility Registry System (FRSUT) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The FRSUT provides Internet access to a single integrated source of comprehensive (air, water, and waste) environmental information about those

facilities, sites, or places. Geneva Rock Products to the north was identified. No violations were listed at this facility and it is not anticipated to pose an environmental risk to the subject property.

Several Mineral Resources Data System (MRDS) listings were identified to the north, northwest, and east/northeast. None of the MRDS had violations listed at their facilities and they are not anticipated to pose an environmental risk to the subject property.

Several of the more pertinent sites listed in the above table are discussed in greater detail below.

8.2.1 RCRA Sites / Drycleaners Sites

The RCRA Generators database is searched within a one-quarter mile radius of the site. The RCRA database lists facilities that have notified the EPA of hazardous waste activity. There are 3 categories of hazardous waste generators:

1. Generators of no more than 100 kilograms per month (kg/mo), known as conditionally exempt small-quantity generators (CESQG).
2. Generators of 100 to 1,000 kg/mo, known as small-quantity generators (SQG).
3. Generators of 1,000 kg or more in a month, known as large-quantity generators (LQG).

Site Name: Waste Management of Ogden
Site Address: 2433 South 2050 West
Distance from Subject Property: Approx. 4.25 Miles southwest
Relative Elevation: Lower
Gradient: Cross-gradient
REC: No
Environmental Database: RCRA VSQG - No violations have been reported at this facility. Within the Eris report this facility is listed to be located upgradient to the subject property by about 530 feet to the southeast. Upon further investigation, the site is located about 4.25 miles to the southwest of the subject property and is not anticipated to pose an environmental risk. The incident report is included in **Appendix E.**

Site Name: Jack B. Parson Companies
Site Address: 2585 East South Weber Drive
Distance from Subject Property: Approx. 1,266 feet East/northeast
Relative Elevation: Lower
Gradient: Down-gradient

REC: No
Environmental Database: RCRA Non-VSQG - No violations have been reported at this facility. This facility is down-gradient and is not anticipated to pose an environmental risk to the subject site at this time based on its lack of violations.

8.2.2 Underground Storage Tank Sites / Spills

Site Name: Hollis Concrete Finishing Co.
Site Address: 2403 South 2050 West
Distance from Subject Property: Approx. 4.25 Miles southwest
Relative Elevation: Lower
Gradient: Cross-gradient
REC: No
Environmental Database: Spills –On August 1, 1995 the following was reported: "Diesel*, oil and acid spills: On going for several years (1980's to date) The company's trucks regularly dump diesel from their above ground tank on the ground and spill crank case oil on the ground. The company uses acid to clean their concrete trucks & washes it out on the ground. This is occurring near ponds, storm drains and residential property. The company is reported to have concrete pads where this work is supposed to be done*." Within the Eris report this spills site is listed to be located upgradient to the subject property by about 520 feet to the southeast. Upon further investigation, the spills site is located about 4.25 miles to the southwest of the subject property and is not anticipated to pose an environmental risk. The incident report is included in **Appendix E.**

Site Name: Waste Management
Site Address: 2433 South 2050 West
Distance from Subject Property: Approx. 4.25 Miles southwest
Relative Elevation: Lower
Gradient: Cross-gradient
REC: No
Environmental Database: Spills, Tier II, Alt Fuels –On June 1, 2013 the following was reported: "*Caller reported that a truck driver was refueling at the facility when they drove off with the fuel nozzle still inserted in the tank. Automatic shut-off failed to initiate and 60 gallons of diesel fuel was released. Most of the spill was contained to the concrete pad with absorbents. Some adjacent soils were impacted and will be excavated and disposed of appropriately. Several catch basins located at the refueling station did not appear to be impacted."* Within the Eris report this spills site is listed to be located upgradient to the subject property by about 530 feet to the southeast. Upon further

investigation, the spills site is located about 4.25 miles to the southwest of the subject property and is not anticipated to pose an environmental risk. The incident report is included in **Appendix E.**

Site Name: Maverick #527
Site Address: 2577 East South Weber Drive
Distance from Subject Property: Approx. 1,086 feet East/northeast
Relative Elevation: Lower
Gradient: Down-gradient
REC: No
Environmental Database: UST – The site contains 6 USTs which are all currently in use. No releases have been reported at this facility and it is not anticipated to pose an environmental risk to the Subject Property based on its lack of documented violations and its distance.

8.2.3 National Priority List Sites

No NPL regulated sites or facilities that were identified within the required search radii of the Subject Property.

8.2.4 Vapor Migration

No sites/facilities that could pose a significant risk of subsurface vapor migration and related building vapor encroachment at the Subject Property were found in our search of the referenced databases and control registries.

9.0-INTERVIEWS

9.1 Owners

Mr. Farrell Poll, the current Trustee of the Subject Property, completed a Site Assessment Questionnaire August 18, 2021. Mr. Poll has been associated with the property for 63+ years. Mr. Poll indicated that his father purchased this farm from Adolf Fernelius in the 1940's. Mr. Poll was not aware of any other past site uses, conditions, or incidents that would constitute an REC including spills, releases, or use of hazardous materials or petroleum, other USTs or ASTs, significant pesticide or herbicide use, or on-site septic systems. A copy of the completed questionnaire is included in **Appendix E**.

9.2 Government Agencies and Officials

CMT submitted a records request under the Government Records Access and Management Act (GRAMA) to the City of South Weber and Davis County for any available records pertaining to potential recognized environmental conditions or potential environmentally detrimental events on or in the immediate vicinity of the subject property. At the time of submittal of this report, no city or county officials or agencies have responded to the records request. If any responses are received following the submittal of this report which change the findings and conclusions of the ESA for the subject property, an addendum will be submitted.

9.3 Others Familiar with the Subject Property

No other individuals or entities familiar with the Subject Property were interviewed at the time of this assessment.

10.0-DATA GAPS

No city or county officials or departments responded to a records request within the timeframe of this assessment. If a response is received after this Phase I ESA is submitted which changes the conclusion of this report, an addendum will be submitted.

It is CMT's conclusion that the above listed data gaps do not affect our ability to reach a conclusion regarding the condition of the subject property and the presence of RECs in relation to the property. No other significant data gaps that would alter the findings and conclusions of this report where encountered.

11.0-FINDINGS

Based on the observations, research, and interviews conducted while performing this Phase I Environmental Site Assessment for the Subject Property, no RECs, HRECs, or CRECs as defined by ASTM Standard E 1527-13 were identified in connection with the Subject Property or adjacent, surrounding properties. No current Land Use Covenants (LUCs) and associated Activity and Use Limitations (AULs) associated with the Subject Property or surrounding properties were identified at the time of this assessment. No known sources of potential vapor migration or intrusion at the Subject Property were identified in this assessment.

12.0-CONCLUSIONS

CMT Engineering has performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Standard E 1527-13 for the Subject Property. This assessment did not identify any RECs, HRECs, or CRECs in connection with the Subject Property or adjacent, surrounding properties.

13.0-STATEMENT OF QUALIFICATIONS

The reviews of state and federal environmental regulatory agency records (institution and engineering control registries), and available historical records, completed for this study were conducted by a qualified member of our engineering staff. The interviews/records requests of property owners/managers, government officials, and other pertinent individuals were conducted by a qualified member of our engineering staff. The qualifications of the environmental professional(s) who conducted this assessment are presented in **Appendix F**.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of this part (40 CFR Part 312, All Appropriate Inquiries Rule). We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR part 312.

14.0-GENERAL INFORMATION AND CONDITIONS

The Phase I Environmental Assessment provided by CMT Engineering for the Subject Property was performed in accordance with presently accepted practices of the engineering consulting profession in this area. The degree of care exercised in preparing this report is consistent with other local consulting firms. Our findings and conclusions are not presented as scientific certainties, but rather as professional opinions based on the limited data obtained during this study. Changes in the conditions of the Subject Property and surrounding properties can occur with the passage of time, whether due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards and regulations may occur, whether the result of legislation, from the broadening of knowledge, or from other reasons. Accordingly, the findings of this report may be invalidated wholly or partially by changes beyond our control. The information obtained from the record research and the interviews pertaining to the Subject Property is considered to be reliable. However,

CMT Engineering does not warrant or guarantee that the information provided by referenced sources is accurate and/or complete.

15.0-CLOSURE

We appreciate the opportunity to be of service to you on this project. If you have any questions, please call.

Diesel, oil and acid spills: On going for several years (1980's to date) The company's trucks regularly dump diesel from their above ground tank on the ground and spill crank case oil on the ground. The company uses acid to clean their concrete trucks & washes it out on the ground. This is occurring near ponds, storm drains and residential property. The company is reported to have concrete pads where this work is supposed to be done.

Responsible Party:	Waste Management		
Title Event Name:	diesel Release		
Incident Summary:			

Caller reported that a truck driver was refueling at the facility when they drove off with the fuel nozzle still inserted in the tank. Automatic shut-off failed to initiate and 60 gallons of diesel fuel was released. Most of the spill was contained to the concrete pad with absorbants. Some adjacent soils were impacted and will be excavated and disposed of appropriately. Several catch basins located at the refueling station did not appear to be impacted.

Unplottable Summary

Total: 0 Unplottable sites

DB	Company Name/Site Name	Address	City	Zip	ERIS ID

No unplottable records were found that may be relevant for the search criteria.

Unplottable Report

No unplottable records were found that may be relevant for the search criteria.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Jun 25, 2021

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Jun 25, 2021

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Jun 25, 2021

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Mar 23, 2021

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Mar 23, 2021

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jun 14, 2021

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Jun 14, 2021

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jun 14, 2021

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jun 14, 2021

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jun 14, 2021

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jun 14, 2021

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 23, 2021

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Feb 23, 2021

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Nov 9, 2020

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 6, 2021

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 2, 2020

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Jul 10, 2020

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Apr 28, 2020

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: May 25, 2021

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Jun 28, 2021

State

Utah National Priorities List: NPL UT

The National Priorities List (NPL) is maintained by the Utah Department of Environmental Quality's Division of Environmental Response and Remediation (DERR). Before a cleanup of a hazardous waste site can take place under Superfund, it must be included on the National Priority List. The NPL is a published list of hazardous waste sites that are eligible for extensive, long-term cleanup action under the Superfund program. When no responsible party can be found, listing on the NPL allows EPA and the State to access the Superfund Trust fund to pay for site cleanup. The DERR assumes no responsibility or liability for the accuracy of the location of these properties.

Government Publication Date: Jun 28, 2021

Potential Contaminated Sites: CONTAM POTENTIAL

This database of Comprehensive Environmental Response, Compensation, and Liability System sites is maintained by the Utah Department of Environmental Quality's Division of Environmental Response and Remediation (DERR). The CERCLA Branch of the DERR performs site investigations of potentially contaminated sites within the State of Utah to determine whether or not they pose a threat to human health and the environment and should be included on the Federal Superfund National Priorities List. Sites are extracted from the Utah Environmental Interactive Map. The DERR assumes no responsibility or liability for the accuracy of the location of these properties.

Government Publication Date: Jun 28, 2021

Solid Waste Facilities and Landfills: SWF/LF

The Division of Solid and Hazardous Waste of the Department of Environmental Quality (DEQ) maintains a list of permitted solid waste and landfill facilities.

Government Publication Date: May 11, 2021

Historical Solid Waste and Landfill Facilities: HSWF

The Division of Solid and Hazardous Waste of the Department of Enviromental Quality (DEQ) maintains a list of historically closed landfills. Public Land Survey System (PLSS) locations provided by the source are subject to accuracy limitations inherent to the PLSS system.

Government Publication Date: Sep 22, 2014

Sites With Leaking Underground Storage Tanks (LUST): LUST

List of Leaking Underground Storage Tank (LUST) Sites made available by the Underground Storage Tank Branch of the Department of Environmental Quality (DEQ), Division of Environmental Response and Remediation (DERR). Includes
sites from the LUST Sites List as well as LUST sites from the DEQ Environmental Interactive Map.

Government Publication Date: May 17, 2021

Sites With Leaking Aboveground Storage Tanks (LAST): LAST

The Division of Environmental Response and Remediation (DERR) has entered into an agreement with the Division of Water Quality (DWQ) to assume oversight of petroleum releases from above ground storage tanks (ASTs).

Government Publication Date: May 11, 2021

Delisted Leaking Storage Tank: DELISTED LST

This database contains a list of closed leaking storage tank sites that were removed from the Utah State Underground Storage Tank program of the Department of Environmental Quality (DEQ).

Government Publication Date: May 17, 2021

Sites With Underground Storage Tanks (UST): UST

A list of Underground Storage Tank (UST) sites made available by the Underground Storage Tank Branch of the Department of Environmental Quality (DEQ), Division of Environmental Response and Remediation (DERR). Includes sites
from the UST Sites list as well as UST sites from the DEQ Environmental Interactive Map.

Government Publication Date: May 17, 2021

Sites With Aboveground Storage Tanks (AST): AST

A list of aboveground storage tank sites made available by the Division of Environmental Response and Remediation (DERR) of the Department of Environmental Quality (DEQ).

Government Publication Date: May 11, 2021

Tanks Lapse List: UST LAPSE

A list of tank facilities that do not have an active Certificate of Compliance due to lapsing, revocation, or installation in process. The listed USTs at these facilities are ineligible to receive deliveries of fuel. Made available by the Underground Storage Tanks Compliance Branch of the Utah Department of Environmental Quality.

Government Publication Date: Aug 6, 2021

Delisted Storage Tanks: DTNK

This database contains a list of closed storage tank sites that were removed from the Utah State Underground Storage Tank program of the Department of Environmental Quality (DEQ).

Government Publication Date: Aug 6, 2021

List of Targeted and Non-targeted Brownfields: BROWNFIELDS

List of Brownfields Projects, either targeted or not targeted for cleanup, made available by the Department of Environmental Quality (DEQ) Division of Environmental Response and Remediation (DERR). The DERR conducts Brownfields activities under authorities of the Voluntary Release Cleanup Act, Hazardous Substances Mitigation Act and the Small Business Liability Relief Brownfields Revitalization Act. These statutes provide mechanisms by which the DERR oversees the assessment and cleanup of Brownfields.

Government Publication Date: Aug 4, 2021

Voluntary Cleanup Site List: VCP

The Utah Voluntary Cleanup Program (VCP) of the Department of Environmental Quality (DEQ) was created to promote the voluntary cleanup of contaminated sites. The VCP is intended to encourage redevelopment of Brownfields and other impacted sites by providing a streamlined cleanup program.

Government Publication Date: Nov 11, 2020

Response Action Sites: RESPONSE

The Voluntary Cleanup Program/Brownfields Section of the Department of Environmental Quality (DEQ) maintains a list of sites at which Response Actions are planned or have been completed.

Government Publication Date: Mar 17, 2021

Sites with Institutional Controls: INST

Sites included in the Voluntary Cleanup Program (VCP), Superfund and Underground Storage Tank Facilities list that have environmental convenants and institutional controls in place.

Government Publication Date: Jun 8, 2021

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 8, which includes Utah.

Government Publication Date: Apr 14, 2020

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 8, which includes Utah.

Government Publication Date: Apr 14, 2020

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

PFOA/PFOS Contaminated Sites: PFAS NPL

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Mar 1, 2021

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Oct 5, 2020

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Jun 25, 2021

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Jun 14, 2021

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: May 5, 2021

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: May 5, 2021

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: May 26, 2021

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 3, 2020

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Dec 18, 2020

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2006

Uranium Mill Tailings Radiation Control Act Sites: URANIUM

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

Government Publication Date: Mar 4, 2017

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Jul 12, 2021

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Apr 13, 2021

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 19, 2020

State

Spill Reports 1988 current through February 7, 2013: SPILLS

Regulated industry, permitted facilities, waste transporters and others are required by state laws to report chemical spills and other environmental incidents within certain time frames, depending on the type of incident. These incidents are reported to The Division of Environmental Response & Remediation (DERR) of the Department of Environmental Quality (DEQ).

Government Publication Date: Apr 20, 2021

Methamphetamine Contaminated Properties: CDL

Utah Administrative Rule 19-6-901 Illegal Drug Operations Site Reporting and Decontamination Act requires local health departments to maintain a list of properties believed to be contaminated by the illegal manufacture of drugs. These properties were reported to the Salt Lake Valley Health Department by a complaint or report from a law enforcement agency and the Department has determined that reasonable evidence exists that the property is contaminated. Once a property is decontaminated, it is removed from this list.

Government Publication Date: May 7, 2021

Dry Cleaning Facilities: DRYCLEANERS

The Division of Air Quality of the Department of Environmental Quality (DEQ) maintains a list of regulated dry cleaners that use perchlorethylene (PCE).

Government Publication Date: Mar 12, 2021

Delisted Drycleaners: DELISTED DRYCLEANERS

A list of sites which once appeared on - and have since been removed from - the list of regulated dry cleaners that use perchlorethylene (PCE) made available by the Division of Air Quality of the Department of Environmental Quality (DEQ).

Government Publication Date: Mar 12, 2021

Tier 2 Chemical Inventory Program: TIER 2

A list of Tier 2 facilities managed by the Division of Environmental Response and Remediation (DERR) of the the Utah Department of Environmental Quality (DEQ).

Government Publication Date: May 3, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

RE: CITY DIRECTORY RESEARCH
South Weber Gateway
South Weber Gateway South Weber, UT

Thank you for contac ng ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse lis ng City Directory search to determine prior occupants of the subject site and adjacent proper es. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Lis ng Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either u lized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as mul ple digi zed directories. These do not claim to be a complete collec on of all reverse lis ng city directories produced.

ERIS has made every effort to provide accurate and complete informa on but shall not be held liable for missing, incomplete or inaccurate informa on. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are addi onal addresses or streets that require searching please contact us at 866-517-5204.

PSR
PHYSICAL SETTING REPORT

Property Information

Order Number:		21081700855p
Date Completed:		August 17, 2021
Project Number:		900166
Project Property:		South Weber Gateway South Weber Gateway South Weber UT 84405
Coordinates:		
	Latitude:	41.12608088
	Longitude:	-111.91734333
	UTM Northing:	4553158.84955 Meters
	UTM Easting:	422996.773432 Meters
	UTM Zone:	UTM Zone 12T
	Elevation:	4,557.05 ft
	Slope Direction:	N

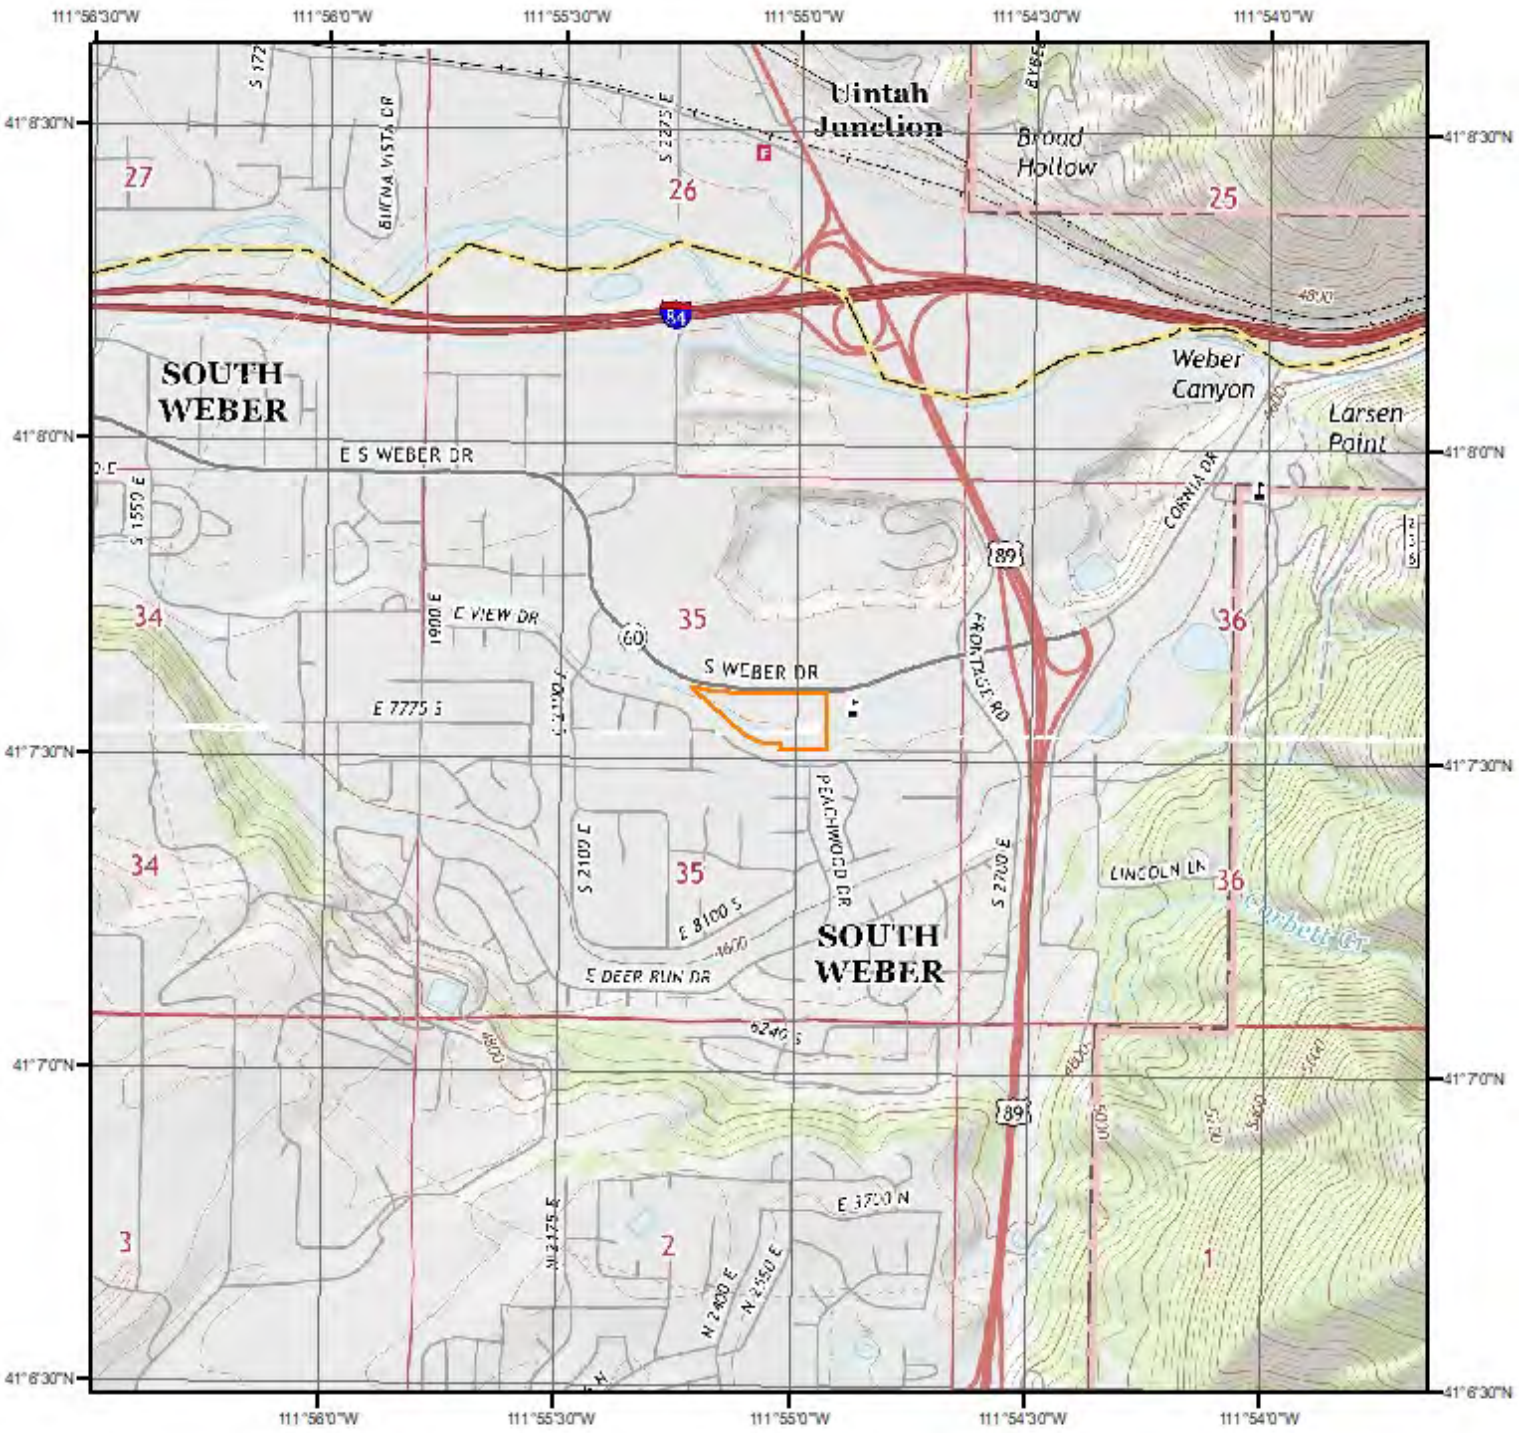
The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Topographic Information



Current USGS Topo (2017)

Quadrangle(s): Kaysville, UT; Ogden, UT

Source: USGS 7.5 Minute Topographic Map

Topographic Information

The previous topographic map(s) are created by seamlessly merging and cutting current USGS topographic data. Below are shaded relief map(s), derived from USGS elevation data to show surrounding topography in further detail.

Topographic information at project property:

Elevation: 4,557.05 ft
Slope Direction: N

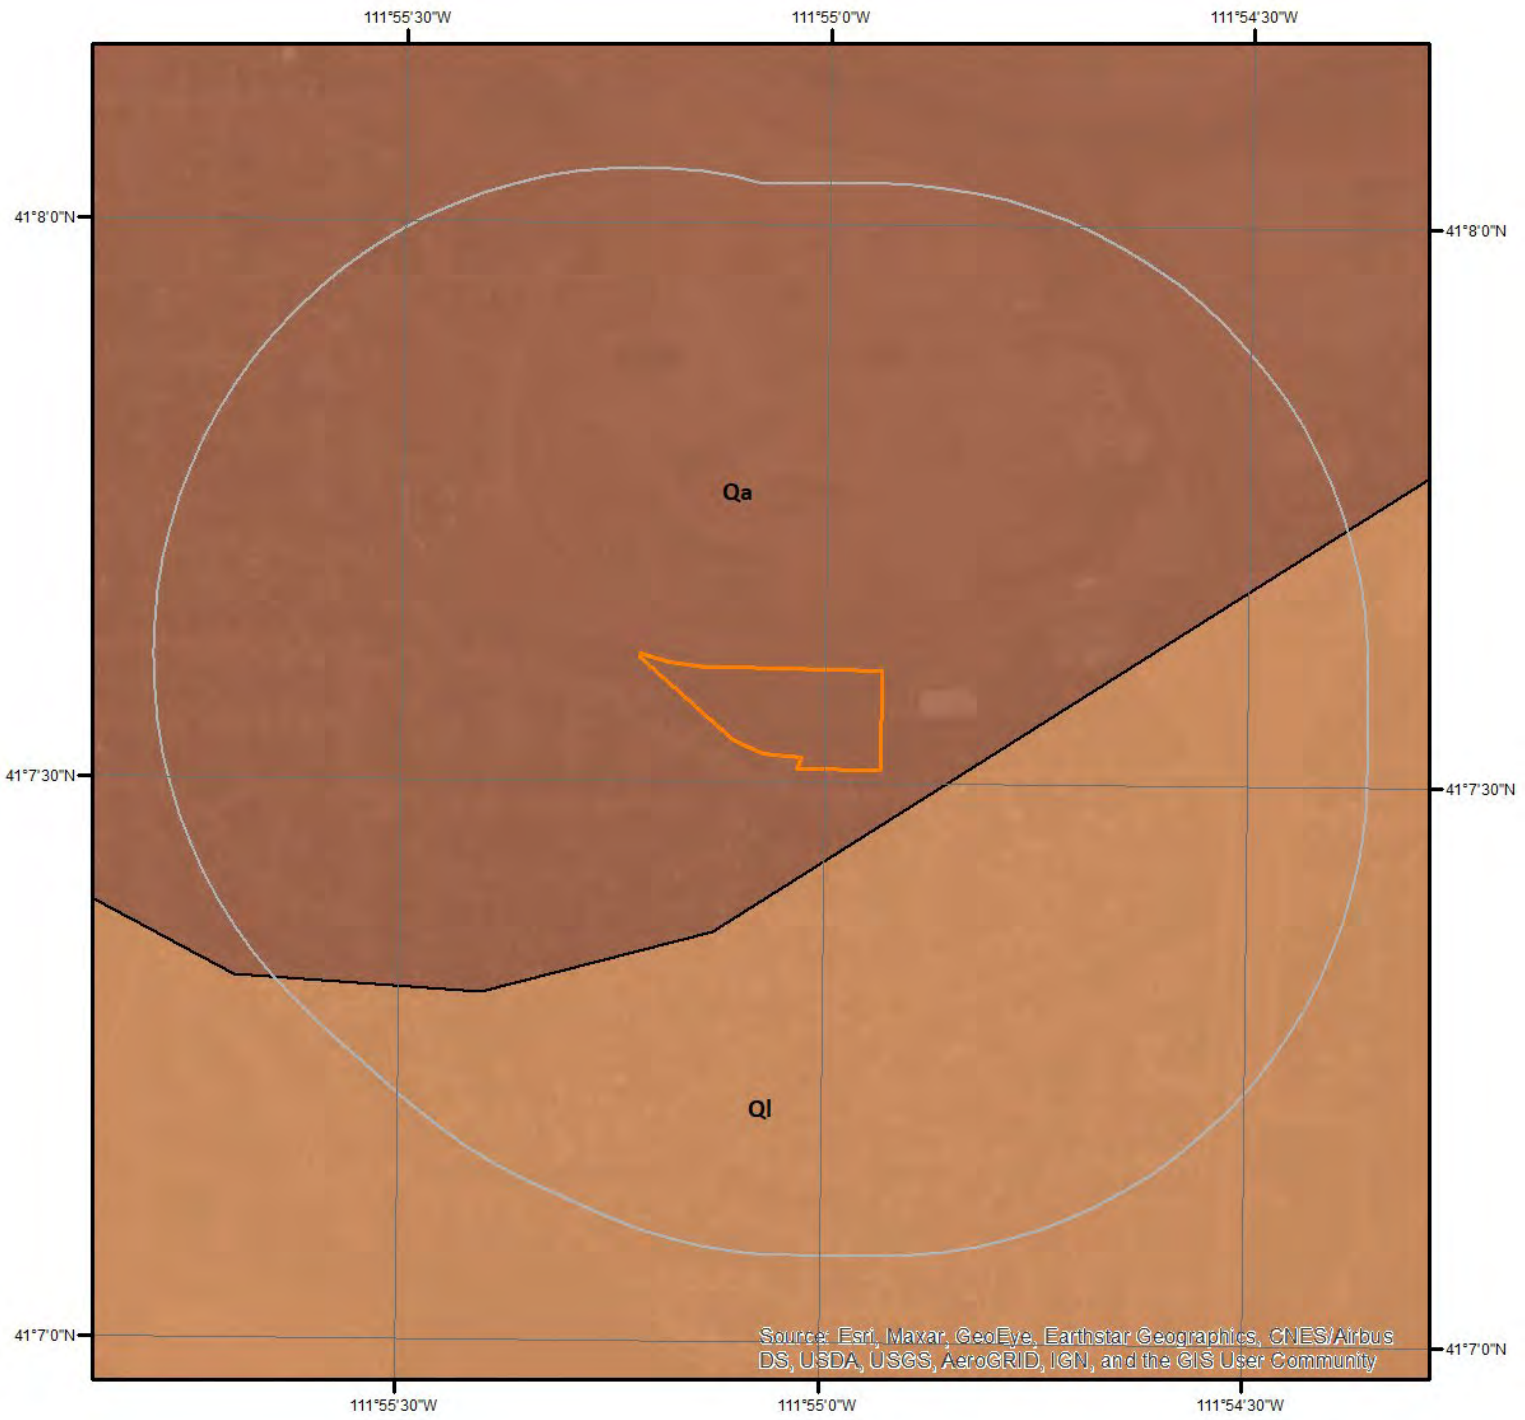
Geologic Information



Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

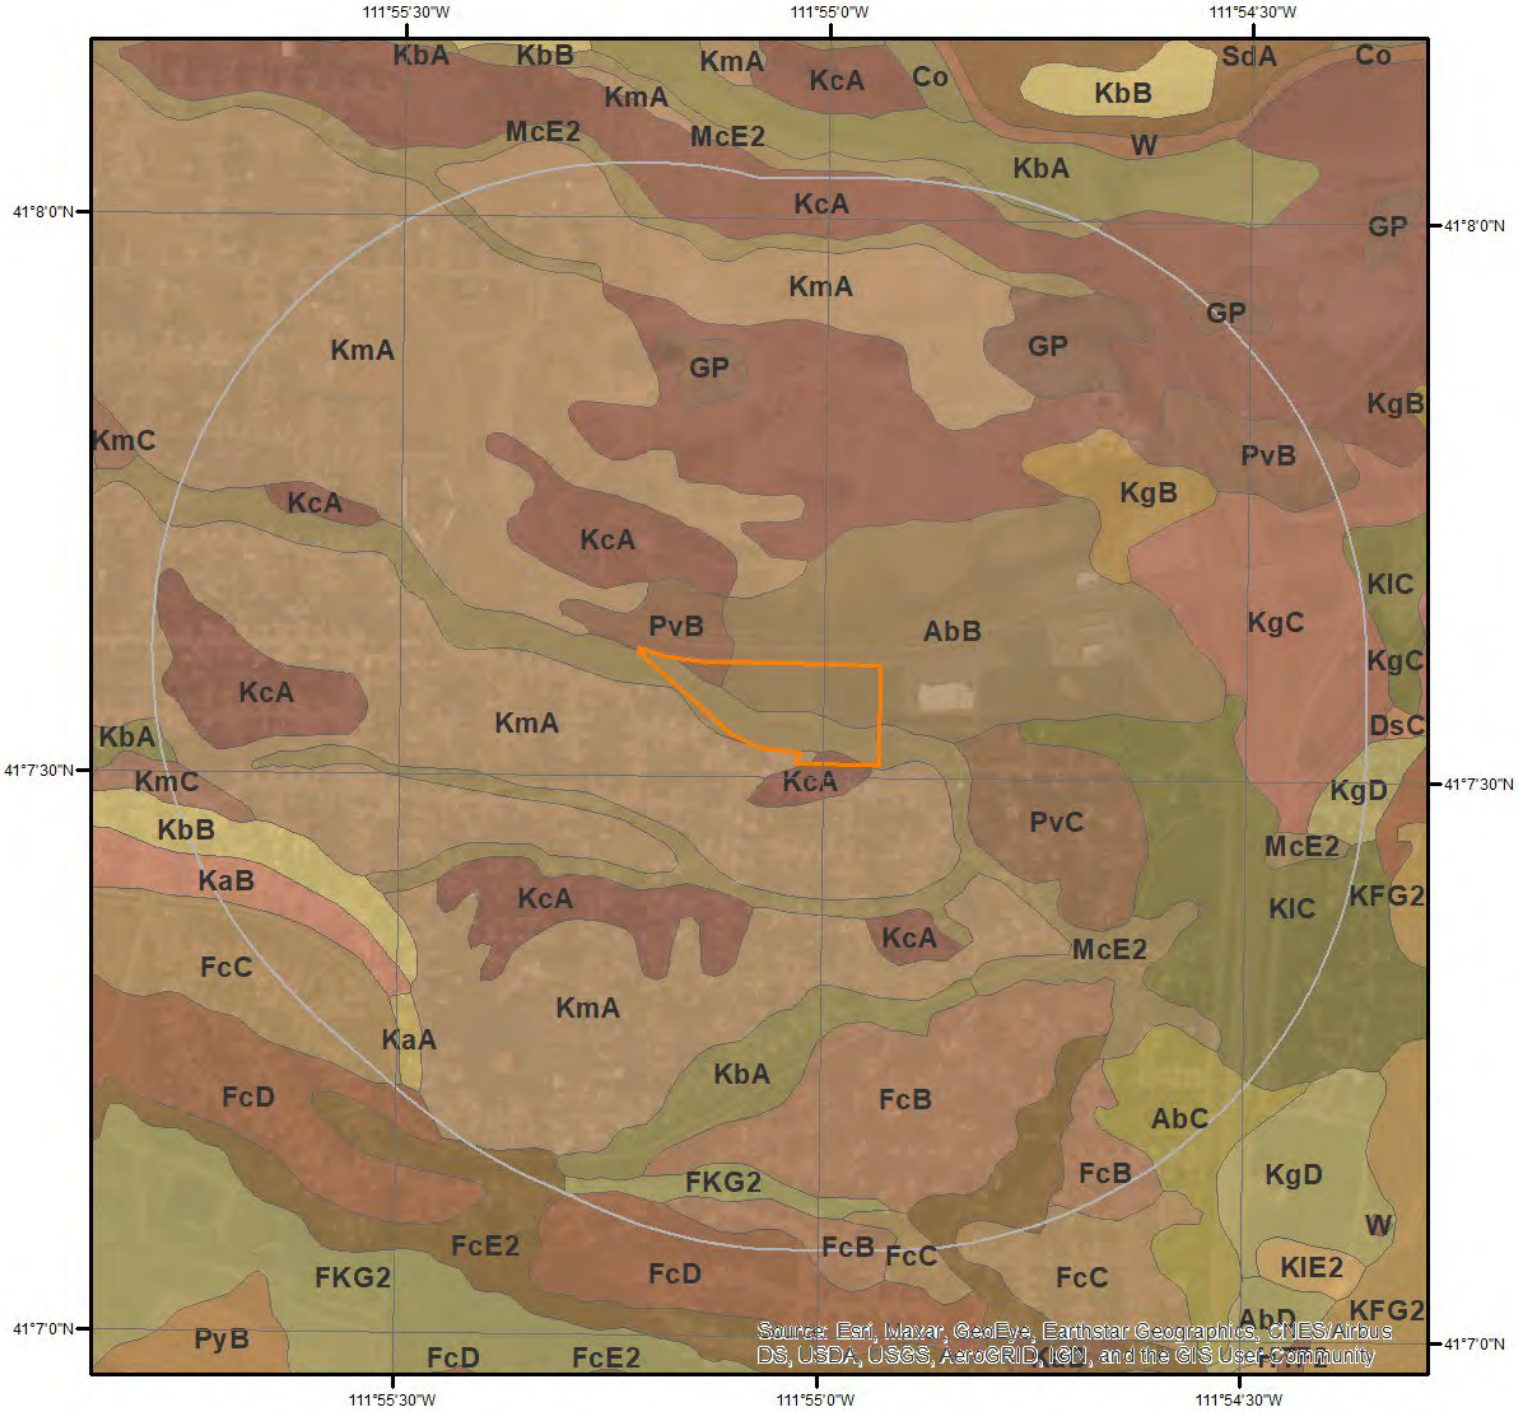
Geologic Unit Qa

Unit Name:	Quaternary alluvium and colluvium
Unit Age:	Quaternary
Primary Rock Type:	alluvium
Secondary Rock Type:	colluvium
Unit Description:	No description available.

Geologic Unit Ql

Unit Name:	Quaternary Lake Bonneville deposits
Unit Age:	Quaternary
Primary Rock Type:	clay or mud
Secondary Rock Type:	sand
Unit Description:	No description available.

Soil Information



SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

ERIS

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit AbB (4.07%)

Map Unit Name:	Ackmen loam, 1 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Ackmen(100%)

horizon Ap(0cm to 15cm)	Loam
horizon AC(15cm to 81cm)	Loam
horizon C(81cm to 152cm)	Loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: AbB - Ackmen loam, 1 to 3 percent slopes

Component: Ackmen (100%)
The Ackmen component makes up 100 percent of the map unit. Slopes are 1 to 3 percent. This component is on alluvial fans. The parent material consists of slope alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. This component is in the R028AY310UT Upland Loam (bonneville Big Sagebrush) North ecological site. Nonirrigated land capability classification is 3s. Irrigated land capability classification is 2e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Map Unit AbC (1.32%)

Map Unit Name:	Ackmen loam, 3 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Ackmen(100%)

horizon Ap(0cm to 15cm)	Loam
horizon AC(15cm to 81cm)	Loam
horizon C(81cm to 152cm)	Loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: AbC - Ackmen loam, 3 to 6 percent slopes

Component: Ackmen (100%)
The Ackmen component makes up 100 percent of the map unit. Slopes are 3 to 6 percent. This component is on alluvial fans. The parent material consists of slope alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth)

is high. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. This component is in the R028AY310UT Upland Loam (bonneville Big Sagebrush) North ecological site. Nonirrigated land capability classification is 3s. Irrigated land capability classification is 3e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Map Unit FcB (3.47%)

Map Unit Name:	Francis loamy fine sand, 0 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Francis(100%)

horizon Ap(0cm to 18cm)	Loamy fine sand
horizon A12(18cm to 33cm)	Loamy fine sand
horizon C1(33cm to 58cm)	Loamy fine sand
horizon C2(58cm to 185cm)	Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: FcB - Francis loamy fine sand, 0 to 3 percent slopes

Component: Francis (100%)
The Francis component makes up 100 percent of the map unit. Slopes are 0 to 3 percent. This component is on lake terraces. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY330UT Upland Sand (black Greasewood, Indian Ricegrass) ecological site. Nonirrigated land capability classification is 6s. Irrigated land capability classification is 3s. This soil does not meet hydric criteria.

Map Unit FcC (3.26%)

Map Unit Name:	Francis loamy fine sand, 3 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Francis(100%)

horizon Ap(0cm to 18cm)	Loamy fine sand
horizon A12(18cm to 33cm)	Loamy fine sand
horizon C1(33cm to 58cm)	Loamy fine sand
horizon C2(58cm to 185cm)	Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: FcC - Francis loamy fine sand, 3 to 6 percent slopes

Component: Francis (100%)
The Francis component makes up 100 percent of the map unit. Slopes are 3 to 6 percent. This component is on lake terraces. The

parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY330UT Upland Sand (black Greasewood, Indian Ricegrass) ecological site. Nonirrigated land capability classification is 6s. Irrigated land capability classification is 3s. This soil does not meet hydric criteria.

Map Unit FcD (4.59%)

Map Unit Name:	Francis loamy fine sand, 6 to 10 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Francis(100%)

horizon Apo(0cm to 18cm)	Loamy fine sand
horizon A12(18cm to 33cm)	Loamy fine sand
horizon C1(33cm to 58cm)	Loamy fine sand
horizon C2(58cm to 185cm)	Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: FcD - Francis loamy fine sand, 6 to 10 percent slopes

Component: Francis (100%)
The Francis component makes up 100 percent of the map unit. Slopes are 6 to 10 percent. This component is on lake terraces. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY330UT Upland Sand (black Greasewood, Indian Ricegrass) ecological site. Nonirrigated land capability classification is 6s. Irrigated land capability classification is 4s. This soil does not meet hydric criteria.

Map Unit FcE2 (4.11%)

Map Unit Name:	Francis loamy fine sand, 10 to 20 percent slopes, eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Francis(100%)

horizon Ap(0cm to 18cm)	Loamy fine sand
horizon A12(18cm to 33cm)	Loamy fine sand
horizon C1(33cm to 58cm)	Loamy fine sand
horizon C2(58cm to 185cm)	Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: FcE2 - Francis loamy fine sand, 10 to 20 percent slopes, eroded

Soil Information

Component: Francis (100%)
The Francis component makes up 100 percent of the map unit. Slopes are 10 to 20 percent. This component is on lake terraces. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY330UT Upland Sand (black Greasewood, Indian Ricegrass) ecological site. Nonirrigated land capability classification is 6s. Irrigated land capability classification is 6s. This soil does not meet hydric criteria.

Map Unit FKG2 (0.34%)

Map Unit Name:	Francis-Kidman complex, 20 to 50 percent slopes, eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Francis(70%)	
horizon Ap(0cm to 18cm)	Loamy fine sand
horizon A12(18cm to 33cm)	Loamy fine sand
horizon C1(33cm to 58cm)	Loamy fine sand
horizon C2(58cm to 185cm)	Fine sand
Kidman(30%)	
horizon H1(0cm to 28cm)	Fine sandy loam
horizon H2(28cm to 43cm)	Fine sandy loam
horizon H3(43cm to 69cm)	Fine sandy loam
horizon H4(69cm to 94cm)	Fine sandy loam
horizon H5(94cm to 124cm)	Very fine sandy loam
horizon H6(124cm to 152cm)	Very fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: FKG2 - Francis-Kidman complex, 20 to 50 percent slopes, eroded

Component: Francis (70%)
The Francis component makes up 70 percent of the map unit. Slopes are 20 to 50 percent. This component is on escarpments on lake terraces. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY330UT Upland Sand (black Greasewood, Indian Ricegrass) ecological site. Nonirrigated land capability classification is 7s. This soil does not meet hydric criteria.

Component: Kidman (30%)
The Kidman component makes up 30 percent of the map unit. Slopes are 20 to 30 percent. This component is on escarpments on lake terraces. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY310UT Upland Loam (bonneville Big Sagebrush) North ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent. There are no saline horizons within 30 inches of the soil surface.

Map Unit GP (0.99%)

Map Unit Name:	Gravel pits

Soil Information

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Map Unit: GP - Gravel pits

Component: Gravel pits (100%)
Generated brief soil descriptions are created for major soil components. The Gravel pits is a miscellaneous area.

Map Unit KaA (0.1%)

Map Unit Name:	Kidman fine sandy loam, 0 to 1 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Kidman(100%)

horizon H1(0cm to 28cm)	Fine sandy loam
horizon H2(28cm to 43cm)	Fine sandy loam
horizon H3(43cm to 69cm)	Fine sandy loam
horizon H4(69cm to 94cm)	Fine sandy loam
horizon H5(94cm to 124cm)	Very fine sandy loam
horizon H6(124cm to 152cm)	Very fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KaA - Kidman fine sandy loam, 0 to 1 percent slopes

Component: Kidman (100%)
The Kidman component makes up 100 percent of the map unit. Slopes are 0 to 1 percent. This component is on lake plains. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY310UT Upland Loam (bonneville Big Sagebrush) North ecological site. Nonirrigated land capability classification is 3c. Irrigated land capability classification is 1 This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent. There are no saline horizons within 30 inches of the soil surface.

Map Unit KaB (1.41%)

Map Unit Name:	Kidman fine sandy loam, 1 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Kidman(100%)

horizon H1(0cm to 28cm)	Fine sandy loam
horizon H2(28cm to 43cm)	Fine sandy loam
horizon H3(43cm to 69cm)	Fine sandy loam

Soil Information

horizon H4(69cm to 94cm)	Fine sandy loam
horizon H5(94cm to 124cm)	Very fine sandy loam
horizon H6(124cm to 152cm)	Very fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KaB - Kidman fine sandy loam, 1 to 3 percent slopes

Component: Kidman (100%)
The Kidman component makes up 100 percent of the map unit. Slopes are 1 to 3 percent. This component is on lake terraces. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY310UT Upland Loam (bonneville Big Sagebrush) North ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 20 percent. There are no saline horizons within 30 inches of the soil surface.

Map Unit KbA (4.74%)

Map Unit Name:	Kilburn sandy loam, 0 to 1 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Kilburn(100%)

horizon A11(0cm to 38cm)	Sandy loam
horizon A12(38cm to 89cm)	Extremely gravelly sandy loam
horizon B2(89cm to 152cm)	Extremely gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KbA - Kilburn sandy loam, 0 to 1 percent slopes

Component: Kilburn (100%)
The Kilburn component makes up 100 percent of the map unit. Slopes are 0 to 1 percent. This component is on deltas, stream terraces. The parent material consists of colluvium and/or slope alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria.

Map Unit KbB (0.85%)

Map Unit Name:	Kilburn sandy loam, 1 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Soil Information

Kilburn(100%)

horizon A11(0cm to 38cm)	Sandy loam
horizon A12(38cm to 89cm)	Extremely gravelly sandy loam
horizon B2(89cm to 152cm)	Extremely gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KbB - Kilburn sandy loam, 1 to 3 percent slopes

Component: Kilburn (100%)
The Kilburn component makes up 100 percent of the map unit. Slopes are 1 to 3 percent. This component is on stream terraces, deltas. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria.

Map Unit KcA (15.68%)

Map Unit Name:	Kilburn stony sandy loam, 0 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Kilburn(100%)

horizon A11(0cm to 38cm)	Stony sandy loam
horizon A11(38cm to 89cm)	Stony sandy loam
horizon B2(89cm to 152cm)	Very gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KcA - Kilburn stony sandy loam, 0 to 3 percent slopes

Component: Kilburn (100%)
The Kilburn component makes up 100 percent of the map unit. Slopes are 0 to 3 percent. This component is on stream terraces. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria.

Map Unit KgB (0.65%)

Map Unit Name:	Kilburn gravelly sandy loam, 1 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Soil Information

Kilburn(100%)

horizon A11(0cm to 13cm)	Gravelly sandy loam
horizon A12(13cm to 28cm)	Gravelly sandy loam
horizon B2(28cm to 61cm)	Very cobbly sandy loam
horizon C(61cm to 152cm)	Very gravelly loamy coarse sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KgB - Kilburn gravelly sandy loam, 1 to 3 percent slopes

Component: Kilburn (100%)
The Kilburn component makes up 100 percent of the map unit. Slopes are 1 to 3 percent. This component is on alluvial fans. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 7s. Irrigated land capability classification is 3s. This soil does not meet hydric criteria.

Map Unit KgC (2.78%)

Map Unit Name:	Kilburn gravelly sandy loam, 3 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Kilburn(100%)

horizon A11(0cm to 13cm)	Gravelly sandy loam
horizon A12(13cm to 28cm)	Gravelly sandy loam
horizon B2(28cm to 61cm)	Very cobbly sandy loam
horizon C(61cm to 152cm)	Very gravelly loamy coarse sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KgC - Kilburn gravelly sandy loam, 3 to 6 percent slopes

Component: Kilburn (100%)
The Kilburn component makes up 100 percent of the map unit. Slopes are 3 to 6 percent. This component is on alluvial fans. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 6s. Irrigated land capability classification is 3s. This soil does not meet hydric criteria.

Map Unit KgD (0.34%)

Map Unit Name:	Kilburn gravelly sandy loam, 6 to 10 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is

	transmitted freely through the soil.

Major components are printed below

Kilburn(100%)

horizon A11(0cm to 13cm)	Gravelly sandy loam
horizon A12(13cm to 28cm)	Gravelly sandy loam
horizon B2(28cm to 61cm)	Very cobbly sandy loam
horizon C(61cm to 152cm)	Very gravelly loamy coarse sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KgD - Kilburn gravelly sandy loam, 6 to 10 percent slopes

Component: Kilburn (100%)
The Kilburn component makes up 100 percent of the map unit. Slopes are 6 to 10 percent. This component is on fans. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 6s. Irrigated land capability classification is 4s. This soil does not meet hydric criteria.

Map Unit KlC (5.23%)

Map Unit Name:	Kilburn cobbly sandy loam, 3 to 10 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Somewhat excessively drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Kilburn(100%)

horizon A1(0cm to 13cm)	Very cobbly sandy loam
horizon A2(13cm to 28cm)	Very cobbly sandy loam
horizon B(28cm to 61cm)	Very cobbly sandy loam
horizon C(61cm to 152cm)	Very cobbly loamy coarse sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KlC - Kilburn cobbly sandy loam, 3 to 10 percent slopes

Component: Kilburn (100%)
The Kilburn component makes up 100 percent of the map unit. Slopes are 3 to 10 percent. This component is on alluvial fans. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 6s. Irrigated land capability classification is 4s. This soil does not meet hydric criteria.

Map Unit KmA (34.7%)

Map Unit Name:	Kilburn gravelly sandy loam, deep over clean sands, 0 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null

Soil Information

Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Kilburn(100%)

horizon A11(0cm to 38cm)	Gravelly sandy loam
horizon A12(38cm to 89cm)	Extremely gravelly sandy loam
horizon B2(89cm to 152cm)	Extremely gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KmA - Kilburn gravelly sandy loam, deep over clean sands, 0 to 3 percent slopes

Component: Kilburn (100%)
The Kilburn component makes up 100 percent of the map unit. Slopes are 0 to 3 percent. This component is on deltas, stream terraces. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria.

Map Unit KmC (0.24%)

Map Unit Name:	Kilburn gravelly sandy loam, deep over clean sands, 3 to 10 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Kilburn(100%)

horizon A11(0cm to 38cm)	Gravelly sandy loam
horizon A12(38cm to 89cm)	Extremely gravelly sandy loam
horizon B2(89cm to 152cm)	Extremely gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: KmC - Kilburn gravelly sandy loam, deep over clean sands, 3 to 10 percent slopes

Component: Kilburn (100%)
The Kilburn component makes up 100 percent of the map unit. Slopes are 3 to 10 percent. This component is on deltas, stream terraces. The parent material consists of lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria.

Map Unit McE2 (8.68%)

Map Unit Name:	Marriott cobbly sandy loam, 10 to 30 percent slopes, eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null

Soil Information

Drainage Class - Dominant:	Somewhat excessively drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Marriott(100%)

horizon A11(0cm to 5cm)	Cobbly sandy loam
horizon A12(5cm to 20cm)	Cobbly sandy loam
horizon B21(20cm to 28cm)	Cobbly fine sandy loam
horizon B22(28cm to 56cm)	Cobbly fine sandy loam
horizon Cca(56cm to 155cm)	Cobbly fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: McE2 - Marriott cobbly sandy loam, 10 to 30 percent slopes, eroded

Component: Marriott (100%)
The Marriott component makes up 100 percent of the map unit. Slopes are 10 to 30 percent. This component is on deltas, terraces. The parent material consists of alluvium and/or lacustrine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY306UT Upland Gravelly Loam (bonneville Big Sagebrush) ecological site. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 10 percent.

Map Unit PvB (1.2%)

Map Unit Name:	Pleasant View loam, 1 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Pleasant View(100%)

horizon Ap(0cm to 10cm)	Loam
horizon A12(10cm to 64cm)	Gravelly loam
horizon A13(64cm to 86cm)	Gravelly loam
horizon C1ca(86cm to 114cm)	Gravelly sandy loam
horizon C1ca(114cm to 142cm)	Gravelly sandy loam
horizon C3(142cm to 170cm)	Gravelly sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: PvB - Pleasant View loam, 1 to 3 percent slopes

Component: Pleasant View (100%)
The Pleasant View component makes up 100 percent of the map unit. Slopes are 1 to 3 percent. This component is on alluvial fans. The parent material consists of slope alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R028AY310UT Upland Loam (bonneville Big Sagebrush) North ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 1 This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 15 percent.

Soil Information

Map Unit PvC (1.25%)

Map Unit Name:	Pleasant View loam, 3 to 6 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *DAVIS* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *DAVIS* County

No Measures/Homes:	38
Geometric Mean:	1
Arithmetic Mean:	1.5
Median:	1.2
Standard Deviation:	1.2
Maximum:	4.3
% >4 pCi/L:	3
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the State of Utah's indoor radon survey. Data represent long-term alpha-track detector readings collected during 1987-88. Compiled from data in Sprinkel and Solomon (1990)

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells — **OGW**

Oil and Gas Well Data made available by the Utah Automated Geographic Reference Center.

Appendix

Public Water System Facilities **PWS**

A list of Public Water System Facilities made available by the Utah Department of Environment Quality (DEQ) Division of Drinking Water. This dataset includes wells, springs, and surface-water intakes used by public water systems.

Water Rights Database **WATER WELLS**

A list of points of diversion (wells) from the Water Rights database. Uses included are domestic, irrigation, mining, municipal, power, and stockwatering. This data is provided by the Department of Natural Resources' Division of Water Rights.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

APPENDIX E

SUPPORTING DOCUMENTATION

SITE ASSESSMENT QUESTIONNAIRE

Property Name: Jane Poll Trust **Job No.:** _____

Property Address: Approx 2310 E. South Weber Dr., South Weber, Utah

Form Completed By: Farrell Poll **Date:** 08/18/2021

Your relationship to the property (Owner, Owner Representative, Property Manager, Tenant, etc.): Trustee

Section 1 Current and Historical Uses of Property

1. How long have you been associated with, or had knowledge of, the property?
   63+ years

2. Name(s) of current and any previous occupant(s) or provide a tenant list.
   I believe my father bought this farm from Adolf Fernelius in the 1940's.

3. Please describe the current use(s) of the property or indicate uses on the tenant list.
   Farming / Pasturing

4. Please describe the past (histories) uses of the property, with approximate dates.
   Farming, gardening, pasturing of cows and horses since the 1940's.

5. Has a previous Phase I ESA or other Environmental Investigation been done on the property? If possible, please provide a copy of these previous studies.
   No

CMT ENGINEERING LABORATORIES

Site Assessment Questionnaire

Section 2 Potential Environmental Conditions

If you are aware of any of the conditions identified, please answer yes so that we can clarify all past and present environmental conditions.

Conditions	Yes	No	Unknown
1. **Industrial Uses of Subject or Adjoining Properties** Industrial uses including, but not limited to: gas/service stations, auto repair or painting, printing, dry cleaners, photo processing or chrome plating, smelting, petroleum refining, and/or other chemical manufacturing	☐	☑	☐
2. **Agricultural / Silva Culture / Aquaculture Uses** Crop production, concentrated animal feeding (poultry, cattle, fish, etc.)	☑	☐	☐
3. **Waste Storage or Disposal** Junkyard, recycling facility, battery storage, landfill, dump, wastewater lagoon	☐	☑	☐
4. **Equipment Use, Storage, or Abandonment** Production lines, hydraulic equipment, vehicles, heavy equipment Farming Equipment, Tractors)	☑	☐	☐
5. **Hazardous Materials** (greater than 5-gallon containers or 25-lb bags) Pesticides, paints, solvents, acids, bases, antifreeze, other regulated materials	☐	☑	☐
6. **Petroleum Hydrocarbons** (greater than 5-gallon containers) Gasoline, diesel, lubricating oil, waste oil, fuel soil, heating oil or bunker oil, kerosene, benzene, toluene, ethylbenzene, xylene, aviation or jet fuel	☐	☑	☐
7. **Spills or Releases of Petroleum Hydrocarbons or Hazardous Materials** Stained soil, dead vegetation, or any other evidence of a petroleum or chemical spill	☐	☑	☐
8. **PCBs** Transformers, hydraulic equipment	☐	☑	☐
9. **Surface Water Issues** Pits, ponds, or lagoons associated with wastewater storage	☐	☑	☐

CMT ENGINEERING LABORATORIES

Site Assessment Questionnaire

		Yes	No	Unknown
10.	**Groundwater Issues** Monitoring or drinking water wells, injection wells, or drains that go directly into the ground	☐	☑	☐
11.	**Wastewater Issues** Floor drains and trenches, sumps, oil water separators on the site	☐	☑	☐
12.	**Underground Storage Tanks (USTs) / Above-ground Storage Tanks (ASTs)** UST / ASTs present or removed – If yes, please specify material stored: gasoline, diesel, fuel oil, used oil, and indicate capacity.	☐	☑	☐
13	**Asbestos Issues** Asbestos Survey, Inspection, Operation and Management Plans, Abatement Reports	☐	☑	☐
14.	**Septic Tanks and Leach Fields** Currently used or abandoned	☐	☑	☐
15.	**Utility Corridors** Oil or Gas Pipelines, Right-of-ways, Easements City Water, Secondary water Sewer, phone	☑	☐	☐
16.	**Regulatory Compliance** Stormwater Plans, Spill Prevention Plans, Air Permits, Wastewater Discharge Permits, UST Permits, 404 Wetlands Permit. If yes, specify which Plan or Permit.	☐	☑	☐
17.	**Natural Resource Issues** Wetlands and Riparian Areas, Critical Habitat, Threatened and Endangered Species, Historic or Cultural Resources	☐	☑	☐
18.	**Legal or Regulatory Actions** Are you aware of any governmental enforcement actions, environmental liens with regard to the property, pending lawsuits, or administrative proceedings concerning a release or threatened release of any hazardous substances or petroleum products involving the property against the owner or any tenant of the property?	☐	☑	☐

CMT ENGINEERING LABORATORIES

Site Assessment Questionnaire

Section 3 User Provided Information

User Provided Information	Yes	No	Unknown
1. **Environmental Liens** Environmental liens that are filed or recorded against the property. Did a search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	☐	☑	☐
2. **AULs** Activity and use limitations that are in place on the property or have been filed or recorded against the property. Did a search of record land title records identify any AULs, such as engineering controls, land use restrictions, or intuitional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	☐	☑	☐
3. **Specialized Knowledge** Specialized knowledge or experience of the person seeking to qualify for the LLP. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	☐	☑	☐
4. **Fair Market Value of Property** Relationship of the purchase price to the fair market value of the property if it were not contaminated. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present on the property?	☐	☑	☐

CMT ENGINEERING LABORATORIES

Site Assessment Questionnaire

	Yes	No	Unknown
5. Commonly Known Information Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For Example			
a. Do you know the past uses of the property?	☑	☐	☐
b. Do you know the specific chemicals that are present or once were present at the property?	☑	☐	☐
c. Do you know the spills or other chemical releases that have taken place at the property? None	☐	☐	☑
d. Do you know of any environmental cleanups that have taken place at the property?	☐	☑	☐
6. Presence of Contamination The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any obvious indications that point to the presence or likely presence of releases at the property?	☐	☑	☐

I have completed the above questionnaire to the best of my knowledge.

PROFESSIONAL EXPERIENCE

Mr. Larsen is a senior engineering geologist in the CMT Vineyard, Utah office. Mr. Larsen is responsible for procuring new geologic and environmental site assessment work and ensuring that the work is completed in a responsive, responsible, and professional manner. Mr. Larsen also assists the engineers in our geotechnical division with the geologic aspects of geotechnical projects.

Mr. Larsen's experience includes all aspects of geologic site classification and geologic hazards evaluation for all sizes of projects from single-family residential to multi-story commercial structures. In his 22 years of experience, Mr. Larsen has served as a project engineering geologist for a variety of private residential, commercial, industrial, and government projects. These include surface fault rupture hazard studies, landslide/slope stability studies, rock fall hazard studies, and debris flow/alluvial fan flooding hazard studies. This work includes preparing the geologic study programs, overseeing and conducting the field work, geologic analysis, report preparation, and consultation with project geotechnical engineers, site owners/managers, and construction managers. Mr. Larsen has also had extensive experience conducting due diligence environmental assessments (Phase I ESA) for numerous properties.

CAPABILITIES

Geologic Hazards Assessment, Environmental Site Assessment, Geologic Site Characterization, Geotechnical Engineering Field Sampling

RELATED PROJECT EXPERIENCE

Mr. Larsen has performed numerous Phase I Environmental Site Assessments throughout the State of Utah.

www.reeve.co

Prepared: November 4, 2021
Revised: December 1, 2021
Reeve Job No.: 7152-05

Executive Summary

This study addresses the traffic impact associated with the proposed development located in South Weber, Utah. The residential section (R7) of the development consists of 62 Town Homes. The commercial section (CH) of the site contains 6 general retail buildings of various sizes. 5 of these buildings possess a drive-through with approximately 1,000 SF. The proposed site will utilize two accesses onto South Weber Drive (SR-60). The study intersections closest to the proposed development, and where the greatest impact is expected, was provided by the city for review.

Study Intersections:
The studied intersections are:

- South 2100 East and South Weber Drive
- West Access and South Weber Drive
- East Access and South Weber Drive
- South 2700 East and South Weber Drive

Study Objectives:
The objectives of this study are:

- Document how the study intersections and accesses currently operate.
- Forecast the amount of traffic expected to be generated by the proposed development.
- Determine how the study intersections and accesses will operate in the future with and without the proposed development.
- Analyze queueing for the study intersections.
- Recommend appropriate mitigation measures if poor operations are identified.

Results:
The principal results of the study are:

- The commercial (CH) section of the development is expected to generate 291 new trips during the AM peak hours and 308 new trips during the PM peak hours.
- The residential (R7) section of the development is expected to generate 35 new trips during the AM peak hours and 42 new trips during the PM peak hours.
- All studied intersections will remain at the existing intersection LOS after the completion of the South Weber Gateway development.

Recommendations:
Reeve and Associates recommends utilizing the existing two-way left-turn lane for left turning west bound traffic entering the development. Restriping for a right turn lane is recommended for east bound traffic entering the development at the East and West Access intersections. The existing right-of-way possesses ample space and existing asphalt width for this improvement.

Traffic Impact Study
South Weber Gateway – South Weber, UT

1.0 Introduction

1.1 Proposed Development

At the request of South Weber City, Reeve & Associates has performed a traffic impact analysis involving the South Weber Gateway, a proposed development containing CH and R7 zoning located in South Weber, Utah. Figure 1 contains a vicinity map showing the location of the proposed development. Site coordinates are: 41.126276°, -111.917349°.

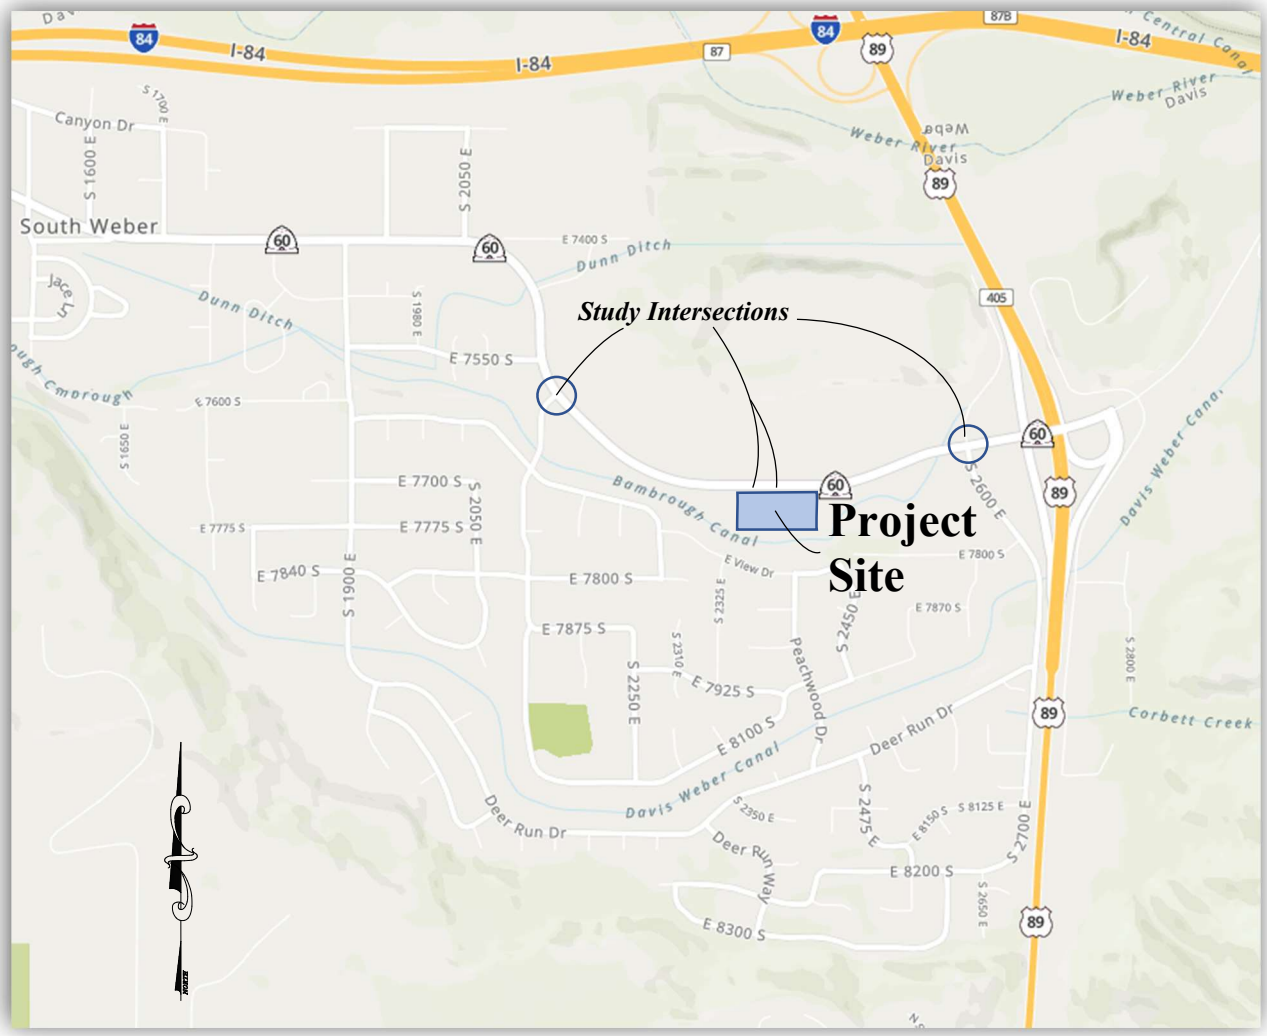
Following are key attributes of the proposed development:

a) Residential (R7) Zoning
    a. Multifamily Housing (Low-Rise) (ITE 220) 62 units.
b) Commercial (CH) Zoning
    a. Shopping Center (ITE 820) 12,089 SF.
    b. Fast-Food Restaurant with Drive-Through Window (ITE 934) 5,000 SF.
c) The site will have 2 accesses on to South Weber Drive. The layout of the site is designed in a way to centralize commercial traffic to the east site access.

1.2 Purpose of Study

The traffic study area was determined by analyzing the roadways to be influenced by the development, as well as the proposed access roads. Manual traffic counts were obtained by Reeve and Associates, and the highest volumes along South Weber Drive and the 2100 and 2700 E intersections were found during the AM peak hour. Trip generation for the proposed development was calculated, and the anticipated highest volumes were found during the PM peak hour. Manual traffic counts were obtained on November 17, 18 and 19, 2021.

Figure 1
Vicinity Map – South Weber Gateway



2.0 Analysis Method

2.1 Level of Service Analysis

For this traffic impact study, the LOS was determined by calculating the average delay time per vehicle in seconds using Synchro 10. Each LOS is associated with a designated range of delay times in seconds per vehicle.

Table 1 demonstrates the LOS for a signalized intersection based on the delay in seconds per vehicle.

Table 1 - Signalized Intersections Level of Service

LOS	*Intersection Delay per Vehicle (sec/veh)*
A	**≤ 10**
B	**> 10 - 20**
C	**> 20 - 35**
D	**> 35 - 55**
E	**> 55 - 80**
F	**> 80**

Source: Highway Capacity Manual (HCM 6th), Transportation Research Board National Research Council Washington D.C. 2000.

Table 2 demonstrates the LOS for an unsignalized intersection based on the delay in seconds per vehicle.

Table 2 - Unsignalized Intersections Level of Service

LOS	*Intersection Delay per Vehicle (sec/veh)*
A	**≤ 10**
B	**> 10 - 15**
C	**> 15 - 25**
D	**> 25 - 35**
E	**> 35 - 50**
F	**> 50**

Source: Highway Capacity Manual (HCM 6th), Transportation Research Board National Research Council Washington D.C. 2000.

According to the Highway Capacity Manual, most facilities are designed for a service flow rate at LOS D or better to ensure acceptable operating conditions to users.

3.0 Existing Conditions

3.1 Existing Corridor Characteristics

Table 3 – Corridor Characteristics

Name	*Classification*	*Speed Limit*	*Lanes*
South Weber Drive	Major Collector	45	Two Lanes with TWLTL
Access Roads	Private	25	Two Lanes
South 2100 East	Local	25	Two Lanes
South 2700 East	Local	35	Two Lanes

3.2 Existing Traffic Volumes

Manual traffic counts were obtained for the study intersections for both AM and PM peak hours. PM and AM counts were obtained on November, 17, 18 and 19, 2021. The peak hour for traffic on South Weber Drive is observed to be the AM Peak hour. The peak traffic generation for the proposed development is the PM peak hour utilizing the ITE traffic generation numbers. The existing traffic volumes assisted in determining the existing LOS and studying future impact, see Figure 2 and Figure 3.

3.3 Crash Data History

The crash history for the study area is provided by udps.numetric.net with only year filters applied.

Table 4 – 3-yr Crash History

	South 2100 East and South Weber Drive		South Weber Drive, Between Study Intersections		South 2700 East and South Weber Drive	
Year	**ID**	**Severity**	**ID**	**Severity**	**ID**	**Severity**

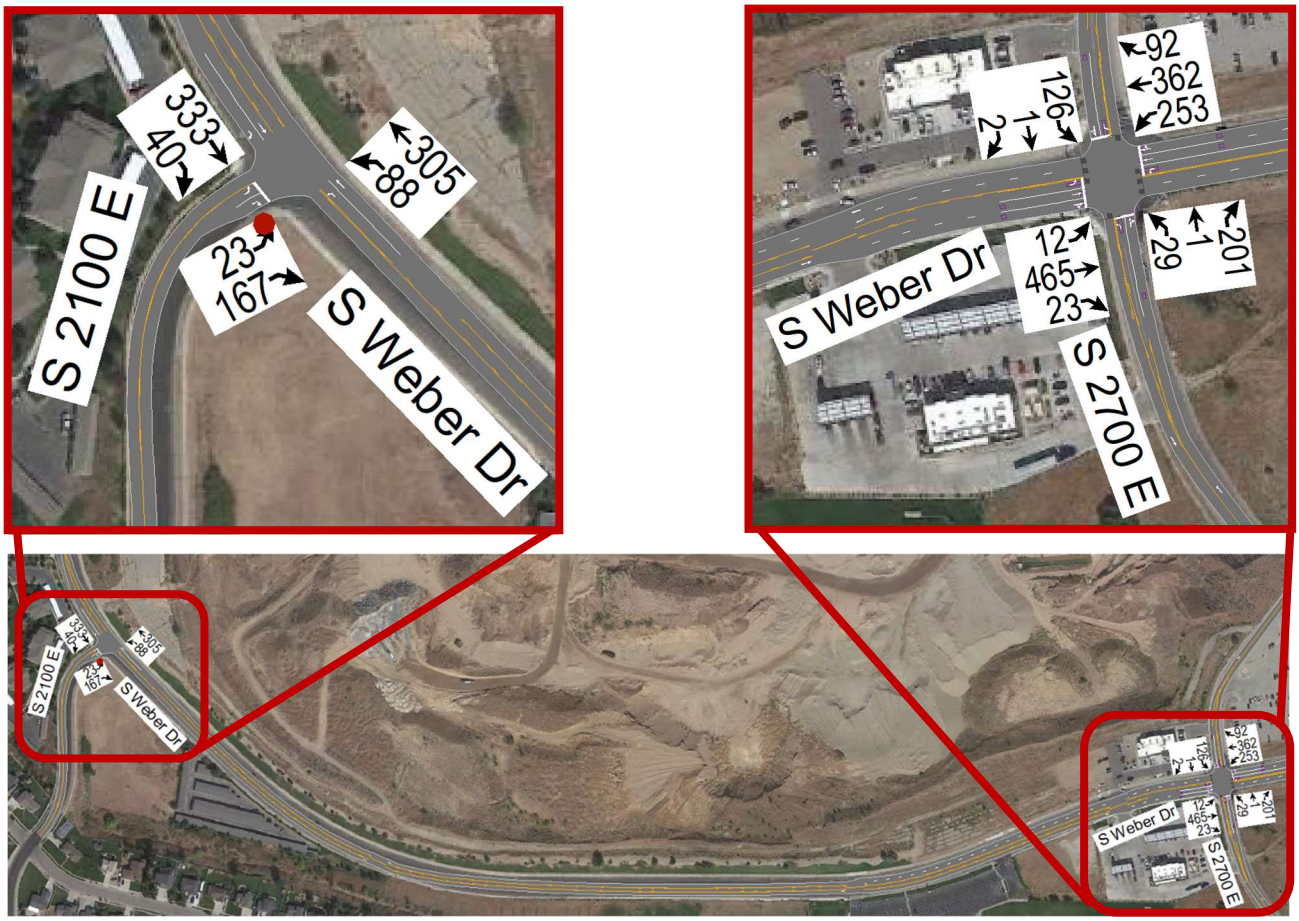
Figure 2
Existing Peak AM Traffic Volumes

Figure 3
Existing Peak PM Traffic Volumes



4.0 Projected Traffic

4.1 Trip Generation

The number of new trips generated for the proposed development were determined using trip generation figures obtained from ITE Trip Generation Manual 10th Edition (See Trip Generation in the Appendix).

The proposed development contains 62 Multifamily Housing (Low-Rise) (ITE 220) units, 12,069 SF of Shopping Centers (ITE 820), and 5,000 SF of Fast-Food Restaurants with Drive Windows (ITE 934).

Table 5 – Development Trip Generation

Peak Hour	*Number of Units*	*Trip Generation*	*% Entering*	*% Exiting*	*Trips Entering*	*Trips Exiting*
Multifamily Housing (Low-Rise)						
Total AM Peak	62	35	28%	72%	10	25
Total PM Peak	62	42	59%	41%	25	17
Shopping Center						
Total AM Peak	12,089 SF	36	54%	46%	20	17
Total PM Peak	12,089 SF	51	50%	50%	25	25
Fast-Food Restaurant with Drive-Through Window						
Total AM Peak	5,000 SF	255	52%	48%	133	122
Total PM Peak	5,000 SF	257	51%	49%	131	126
Combined AM		**326**	**50%**	**50%**	**162**	**164**
Combined PM		**349**	**52%**	**48%**	**181**	**168**

4.2 Trip Distribution

The trip distribution pattern is based on the manual traffic counts obtained by Reeve and Associates with consideration of access to the site and the regional transportation system. The resulting distribution of existing traffic along South Weber Drive during the AM peak hour is 70% east bound and 30% west bound, and 56% east bound and 44% west bound in the PM peak hour.

The proposed development contains both residential (R7) zoning, and commercial (CH) zoning. It is estimated that 70% of the residential traffic will use the West Access, and 95% of the commercial traffic will use the East Access. These trip distributions were used to assign the Peak Hour generated traffic at the study intersections to create trip assignments for the proposed development. See Figure 4 and Figure 5 for the trip distribution assignments for the development.

4.3 Total Projected Traffic

The Total Projected Traffic Volumes, Figure 6 and Figure 7, show the total traffic volumes for the new proposed development. Projected total traffic conditions include existing traffic volumes with the addition of the new generated trips described above.

4.4 Queuing Analysis

Queue lengths were calculated via traffic simulation in Synchro 10. Queue lengths were calculated to the 95th percentile queue lengths for each intersection. Sufficient queueing is anticipated for all studied intersections and accesses. See the full queuing analysis in the Appendix.

Table 6 – AM Queuing by Movement (95th percentile)

5.0 Conclusion

5.1 Results and Conclusion

The traffic impact analysis evaluated the intersections affected by the site generated traffic volumes based on current conditions and traffic patterns. This is done in conjunction with the projected traffic flows from the proposed development. The results of the study are shown in Table 8 and Table 9.

Table 8 – AM Approach LOS and Delay (s/veh)

	Proposed	C 30.1	C 20.4	B 15.1	C 22.0	**C** **23.1**

Source: Delay times and LOS determined using HCM 6th Edition in Synchro 10.

The principal findings from the traffic impact analysis have determined the following results. During the peak hours, all study intersections remained at the same LOS with the addition of the South Weber Gateway development. The two site access intersections will both operate at a lowest approach LOS of C.

The existing South 2700 East and South Weber Drive intersection will remain at the same lowest approach LOS of D. All studied intersections will have adequate queuing for the proposed development. All existing intersections will remain at their current overall intersection LOS during both AM and PM peak hours after the completion of this project.

Therefore, it is our professional opinion upon completion of this project, with the road improvements recommended in Section 5.2, the South Weber Gateway development should be permitted per the traffic data contained within this report.

5.2 Design Recommendations

Reeve and Associates recommends utilizing the existing two-way left-turn lane for left turning west bound traffic entering the development. Restriping for a right turn lane is recommended for east bound traffic entering the development at the East and West Access intersections. The existing right-of-way possesses ample space for this improvement. All improvements shall be to UDOT Standard Specifications & Standard Drawings, South Weber City General Plan Section 4, and South Weber City Development, Design, & Construction Standards.

Re: Landscape Ordinance Review

PURPOSE

Discuss a draft ordinance and any revision to that draft for final submission.

BACKGROUND

Due to current impacts of the prolonged drought across the state, it has become necessary to reduce water usage to preserve this resource for future generations. A particular concern for water usage is the impact that landscape maintenance has on the supply. Excessive watering for non-native and drought intolerant vegetation brings a need for change.

Weber Basin as well as other water districts throughout the state are implementing incentive programs to help users convert current vegetation to a more water-wise solution, and are encouraging municipalities to update ordinances to promote, encourage, or require water-wise landscaping on new construction. Weber Basin has provided a draft ordinance for cities to consider. Cities must adopt a water-wise landscape ordinance in order to qualify for incentive programs.

At the October Planning Commission, the commission heard a presentation from Weber Basin Water Conservancy District about the programs that are available and discussed what changes they would implement in a draft ordinance. City Staff has reviewed the ordinance and made some revisions. The Planning Commission will discuss those revisions and finalize an ordinance for consideration.

WATER EFFICIENT LANDSCAPE ORDINANCE

ORDINANCE NUMBER <CITY ORDINANCE NUMBER>

Section 1. Preamble

A. Whereas, water is an increasingly scarce resource, of limited supply, and are subject to ever increasing demands;

B. Whereas, it is the policy of <CITY NAME> to promote the conservation and efficient use of water and to prevent waste of this valuable resource;

C. Whereas, <CITY NAME> recognizes that landscapes provide areas for active and passive recreation;

D. Whereas; landscape design, installation, maintenance and management can and should be water efficient;

E. Whereas, <CITY NAME> desires to promote the design, installation and maintenance of landscapes that are both attractive and water efficient;

F. Whereas, <CITY NAME> can accomplish these goals by adopting this ordinance; and,

G. Whereas, <CITY NAME> has the authority to adopt this ordinance pursuant to Utah Code Annotated (2010) § 10-3-702, and hereby exercises its legislative powers in doing so.

Section 2. Ordaining Clause

Be it ordained by the <CITY NAME>, that the Water Efficient Landscape Ordinance, Number <CITY ORDINANCE NUMBER>.

Section 3. Title, Water Efficient Landscape Requirements

A. An ordinance amending the Zoning Code of the City of <CITY NAME> so as to add a Water Efficient Landscape Ordinance of minimum landscape requirements. This ordinance shall be referred to as "<CITY NAME> City Water Efficient Landscape Ordinance".

Section 4. Purpose

The City Council has found that it is in the public interest to conserve the public's water resources and to promote water efficient landscaping. The purpose of this ordinance is to protect and enhance the community's environmental, economic, recreational, and aesthetic resources by promoting efficient use of water in the community's landscapes, reduce water waste and establish a structure for designing, installing and maintaining water efficient landscapes throughout the City.

Section 5. Definitions

The following definitions shall apply to this ordinance:

Applied Water: The portion of water supplied by the irrigation system to the landscape.

Bubbler: An irrigation head that delivers water to the root zone by “flooding” the planted area, usually measured in gallons per minute. Bubblers exhibit a trickle, umbrella or short stream pattern.

Check Valve: A device used in sprinkler heads or pipe to prevent water from draining out of the pipe through gravity flow. Used to prevent pollution or contamination or the water supply due to the reverse flow of water from the secondary irrigation system.

Drip Emitter: Drip irrigation fittings that deliver water slowly at the root zone of the plant, usually measured in gallons per hour.

Effective Precipitation: The portion of total precipitation which becomes available for plant growth.

Established Landscape: The point at which plants in the landscape have developed significant root growth into the soil.

Establishment Period: the first year after installing the plant in the landscape.

Evapotranspiration (ET): The quantity of water evaporated from adjacent soil and other surfaces and transpired by plants during a specified time, expressed in inches per day, month or year.

Grading Plan: The Grading Plan shows all finish grades, spot elevations as necessary and existing and new contours with the developed landscape area.

Ground Cover: Material planted in such a way as to form a continuous cover over the ground that can be maintained at a height not more than twelve (12) inches.

Hardscape: Patios, decks and paths. Does not include driveways and sidewalks.

Irrigation System Audit: an in-depth evaluation of the performance of an irrigation system that includes, but is not limited to, inspection, system tune-up, system test with distribution uniformity or emission uniformity, reporting overspray or runoff that causes overland flow, and preparation of an irrigation schedule.

Irrigation Landscaped Area: All portions of a development site to be improved with plantings and irrigation. Natural open space areas shall not be included in the irrigated landscape area.

Irrigation Efficiency: the measurement of the amount of water beneficially applied, divided by the total amount of water applied. Irrigation efficiency is derived from measurements and estimates of irrigation system hardware characteristics and management practices.

Irrigation Plan: The irrigation plan shows the components of the irrigation system with water meter size, backflow prevention (when outdoor irrigation is supplied with culinary water), precipitation rates, flow rate and operating pressure for each irrigation circuit, and identification of all irrigation equipment.

Landscape Architect: A person who holds a certificate to practice landscape architecture in the state of Utah. Only a Landscape Architect can legally create commercial landscape plans.

Landscape Designer: A person who may or may not hold professional certificates for landscape design/architecture and cannot legally create commercial landscape plans. Landscape Designers generally focus on residential design and horticultural needs of home landscapes.

Landscape Education Package: A package that is intended to inform and educate water users in the City about water efficient landscapes. This package should include a listing of water conserving plants, certified landscape designers, landscape architects, certified irrigation designers, and certified irrigation contractors. Information regarding the City's water rates, billing format for water use and commitment to water conservation may also be included.

Landscape Plan Documentation Package: The preparation of a graphic and written criteria, specifications, and detailed plans to arrange and modify the effects of natural features such as

plantings, ground and water forms, circulation, walks and other features to comply with the provisions of this ordinance. The Landscape Plan Documentation Package shall include a project data sheet, a Planting Plan, an Irrigation Plan, and a Grading Plan.

Landscape Zone: A portion of the landscaped area having plants with similar water needs, areas with similar microclimate (i.e., slope, exposure, wind, etc.) and soil conditions, and areas that will be similarly irrigated. A landscape zone can be served by one irrigation valve, or a set of valves with the same schedule.

Landscaping: Any combination of living plants, such as trees, shrubs, vines, ground covers, flowers, or grass; natural features such as rock, stone, or bark chips; and structural features, including but not limited to, fountains, reflecting pools, outdoor art work, screen walls, fences or benches.

Localscapes®: A locally adaptable and environmentally sustainable urban landscape style that requires less irrigation than traditional Utah landscapes (see www.Localscapes.com).

Maximum Applied Water Allowance (MAWA): the upper limit of annual applied water for the established landscaped area as specified in Section 8. It is based upon the area's reference evapotranspiration, a plant adjustment factor, and the size of the landscape area. The Estimated Total Water Use shall not exceed the MAWA.

Microclimate: The climate of a very small restricted area that is different from the surrounding area. These areas include shade areas, sun areas, and areas protected by surrounding structures.

Mulch: Any material such as rock, bark, wood chips or other materials left loose and applied to the soil.

Park Strip: A typically narrow landscaped area located between the back-of-curb and sidewalk.

Plant Adjustment Factor: A reference evapotranspiration factor, also referred to as a crop coefficient which is a value to indicate water needs of various plant types for optimum growth or yield. It is a factor to provide acceptable appearance and function of the plant.

Planting Plan: A Planting Plan shall clearly and accurately identify and locate new and existing trees, shrubs, ground covers, turf areas, driveways, sidewalks, hardscape features, and fences.

Pop-up Spray Head: A sprinkler head that sprays water through a nozzle in a fixed pattern with no rotation.

Precipitation Rate: The depth of water applied to a given area, usually measured in inches per hour.

Pressure Compensating: A drip irrigation system that compensates for fluctuating water pressure by only allowing a fixed volume of water through drip emitters.

Rehabilitated Landscaping: Altering, repairing, or adding to a landscape to make possible a compatible use, increase curb appeal, decrease maintenance, etc.

Rotor Spray Head: A sprinkler head that distributes water through a nozzle by the rotation of a gear or mechanical rotor.

Runoff: Irrigation water that is not absorbed by the soil or landscape area to which it is applied, and which flows onto other areas.

Smart Automatic Irrigation Controller: An automatic timing device used to remotely control valves in the operation of an irrigation system using the internet to connect to a real time weather source or soil moisture sensor. Smart Automatic Irrigation Controllers schedule irrigation events using either evapotranspiration or soil moisture data to control when and how long sprinklers or drip systems operate and will vary based on time of year and weather/soil moisture conditions.

Special Landscape Area: (SLA) means an area of the landscape dedicated solely to edible plants, areas irrigated with recycled water, water features using recycled water and areas dedicated to active play such as parks, sports fields, golf courses, and where turf provides a playing surface.

Spray Sprinkler: An irrigation head that sprays water through a nozzle.

Stream Sprinkler: An irrigation head that projects water through a gear rotor in single or multiple streams.

Turf: A surface layer of earth containing grass species with full root structures that are maintained as mowed grass.

Waste of Water: shall include, but not necessarily limited to:

1. The use of water for any purpose, including outdoor irrigation, that consumes, or for which is applied substantial excess water beyond the reasonable amount required by the use, whether such excess water is lost due to evaporation, percolation, discharges into the sewer system, or is allowed to run into the gutter or street.
2. Washing sidewalks, driveways, parking areas, tennis courts, patios, or other paved areas except to alleviate immediate health or safety hazards.

Water-Conserving Plant: A plant that can generally survive with available rainfall once established although supplemental irrigation may be needed or desirable during spring and summer months.

Section 6. Applicability of Water Efficient Landscape Ordinance

The provisions of this ordinance shall apply to all new and rehabilitated landscaping for public agency projects, private commercial and industrial development projects, developer-installed landscaping in multi-family and single-family residential projects~~, and homeowner provided landscape improvements within the front, side, and rear yards of single and two family dwellings~~.

Section 7. Landscape Design Standards

A. Plant Selection.

1. Plants shall be well-suited to the microclimate and soil conditions at the project site. Both native and locally-adapted plants are acceptable. Plants with similar water needs shall be grouped together as much as possible.
2. Areas with slopes greater than 25% shall be landscaped with deep-rooting, water- conserving plants for erosion control and soil stabilization.
3. Park strips and other landscaped areas less than eight (8) feet wide shall be landscaped with water-conserving plants, that do not a mass planting of any type of plant material requiring uniform overhead spray irrigation.

   Note: Please see Exhibit A for a list of recommended plants for various landscape situations and conditions (not a comprehensive list).

Commented [TC1]: We will have to get Exhibit A from the Water District.

B. Mulch. After completion of all planting, all irrigated non-turf areas shall be covered with a minimum three (3) inch layer of mulch to retain water, inhibit weed growth, and moderate soil temperature. Non-porous material shall not be placed under the mulch.

C. Soil Preparation. Soil preparation will be suitable to provide healthy growing conditions for the plants and to encourage water infiltration and penetration. Soil preparation shall include scarifying the soil to a minimum depth of six (6) inches and amending the soil with organic material as per specific recommendations of the Landscape Designer/Landscape Architect based on the soil conditions.

D. Tree Selection. Tree species shall be selected based on growth characteristics and site conditions, including available space, overhead clearance, soil conditions, exposure, and desired color and appearance. Trees shall be selected as follows:

1. Broad canopy trees shall be selected where shade or screening of tall objects is desired;
2. Low-growing trees shall be selected for spaces under utility wires;
3. Select trees from which lower branches can be trimmed to maintain a healthy growth habit where vision clearance and natural surveillance is a concern;
4. Narrow or columnar trees shall be selected where awnings or other building features limit growth, or where greater visibility is desired between buildings and the street for natural surveillance;
5. Street trees shall be planted within existing and proposed park strips, and in sidewalk tree wells on streets without park strips. Tree placement shall provide canopy cover (shade) and avoid conflicts with existing trees, retaining walls, utilities, lighting, and other obstacles; and
6. Trees less than a two-inch caliper shall be double-staked until the trees mature to a two-inch caliper.

Section 8. Irrigation Design Standards

A. Smart Automatic Irrigation Controller. Landscaped areas shall be provided with a WaterSense labeled smart irrigation controller which automatically adjusts the frequency and/or duration of irrigation events in response to changing weather conditions. All

controllers shall be equipped with automatic rain delay or rain shut-off capabilities and shall be setup to operate in "smart" mode.

B. Each valve shall irrigate a landscape with similar site, slope and soil conditions and plant materials with similar watering needs. Turf and non-turf areas shall be irrigated on separate valves. Drip emitters and sprinklers shall be placed on separate valves.

C. Drip emitters or a bubbler shall be provided for each tree. Bubblers shall not exceed 1.5 gallons per minute per device. Bubblers for trees shall be placed on a separate valve unless specifically exempted by the City due to the limited number of trees on the project site.

D. Drip irrigation or bubblers shall be used to irrigate plants in non-turf areas. Pop-up spray heads shall be at a minimum of four (4) inches in height to avoid blockage from lawn foliage.

E. Sprinklers shall have matched precipitation rates with each control valve circuit.

F. Sprinkler heads shall be attached to rigid lateral lines with flexible material (swing joints) to reduce potential for breakage.

G. Check valves shall be required where elevation differences cause low-head drainage. Pressure compensating valves and sprinklers shall be required where a significant variation in water pressure occurs within the irrigation system due to elevation differences.

H. Filters shall be required on all secondary water service connections. Filters shall have as a minimum a 30 mesh screen and shall be cleaned and maintained by the property owner on a regular basis.

I. Drip irrigation lines require additional filtration at or after the zone valve at a minimum of 200 mesh and end flush valves are required as necessary for drip irrigation lines.

J. Valves with spray or stream sprinklers shall be scheduled to operate in accordance with local water supplier restrictions to reduce water loss from wind, evaporation or other environmental conditions not suitable for irrigation.

K. Program valves for multiple repeat cycles where necessary to reduce runoff, particularly on slopes and soils with slow infiltration rates.

L. Meter Installation: Meters shall be specified by the <CITY NAME> for the particular installation and shall report instantaneous flow in gallons per minute (gpm) and totalized flow in gallons via encoded register output. <DEFINE INSTALLATION REQUIREMENTS INCLUDING METER MANUFACTURER AND ENCLOSURE DEPTHS ETC>

M. AMR Transmitters: Each meter shall be fitted with an AMR transmitter with integral connector. <DEFINE AMR TRANSMITTER AND INSTALLATION REQUIREMENTS>

Commented [TC2]: We will need to get this information from Brandon Jones or Mark Larsen.

Each new development or rehabilitated landscape that uses primary potable water for landscape irrigation must provide a water budget calculation to demonstrate a Maximum Applied Water Allowance (MAWA) for the new landscape or development. For parcels using secondary water,

the MAWA is determined by the secondary water provider based on parcel size and is referred to as an allocation.

The Maximum Applied Water Allowance shall be calculated using the following equation:

MAWA = (ETo) (0.62)(1.15)[(0.8 x LA) + (0.3 x SLA)]
MAWA = Maximum Applied Water Allowance (gallons per year)
ETo = Reference Evapotranspiration (inches per year) as calculated from weather data at the closest available weather station.
0.62 = Conversion Factor (to gallons)
1.15= Delivery Inefficiency Factor (sprinkler system uniformity etc.)
0.8 = ET Adjustment Factor (ETAF), plant factor or crop coefficient (.8 standard for cool season turf)
LA = Landscape Area including SLA (square feet)
0.3 = Additional Water Allowance for SLA
SLA = Special Landscape Area (square feet)

ETo values can be obtained directly from the USU Climate Center where a data base of weather data from local stations is collected, analyzed, and stored. If you cannot find the ET data you need, please contact the City.

Additional details and examples of calculations are found in Appendix A

Section 9. Landscapes in New Single-family Residential Developments

A. Homebuilders and/or developers subdividing lots and/or constructing new single-family residential homes shall provide water-efficient landscaping to prospective home buyers, such as the Localscapes design style when the landscape is installed by the homebuilder/developer. The water-efficient landscaping option shall meet the Landscape Design Standards and Irrigation Design Standards of this ordinance, and any central open shape area consisting of plant material in mass requiring overhead spray irrigation shall not exceed 35% of the total landscaped area.

B. Homebuilders and/or developers who construct model homes for a designated subdivision shall install water-efficient landscaping, such as the Localscapes design style. The water-efficient landscaping option shall meet the Landscape Design Standards and Irrigation Design Standards of this ordinance, and any central open shape area consisting of plant material in mass requiring overhead spray irrigation shall not exceed 35% of the total landscaped area.

C. New Construction homes shall have landscaping and irrigation plans approved by the City Planning Department prior to issuance of building permits, for which no variance may be granted, and which meet the aforementioned requirements.

D. Model homes shall include an informational brochure on water-efficient landscaping or Localscapes. Localscapes brochures can be obtained from the City Planning Department.

~~E. When buyers or owners are installing their own landscaping on new home construction, a time frame for landscaping to be completed shall be 18 months from the time of occupancy to complete the front yard and no more than three years to complete the total landscape.~~

Commented [TC3]: This section we tried to craft it so that if a developer is putting in the landscaping we would require waterwise landscaping. If a home owner is putting in the landscaping we would not have the same requirements, however, we would still encourage it.

Formatted: Font color: Text 1

Section 10. Prohibition on Restrictive Covenants Requiring Uniform Plant Material Irrigated with Spray Irrigation

A. Any Homeowners Association governing documents, such as bylaws, operating rules, covenants, conditions, and restrictions that govern the operation of a common interest development, are void and unenforceable if they:

1. Require the use of any uniform plant material requiring overhead spray irrigation in landscape areas less than 8 feet wide or require any uniform plant material requiring overhead spray irrigation in other areas that exceed 40% of the landscaped area; or

2. Prohibit, or include conditions that have the effect of prohibiting, the use of water-conserving plants as a group; or

3. Have the effect of prohibiting or restricting compliance with this ordinance or other water conservation measures.

Commented [TC4]: How do we feel about this condition?

Section 11. Landscapes in Commercial, Industrial, and Institutional Developments

A. Commercial, industrial and institutional landscapes shall meet the Landscape Design Standards and Irrigation Design Standards of this ordinance, and the turf area shall not exceed 15% of the total landscaped area, outside of active recreation areas.

Section 12. Documentation for Commercial, Industrial, and Institutional Projects

Landscape Plan Documentation Package. A copy of a Landscape Plan Documentation Package shall be submitted to and approved by the City prior to the issue of any permit. A copy of the approved Landscape Plan Documentation Package shall be provided to the property owner or site manager and to the local retail water purveyor. The Landscape Plan Documentation Package shall be prepared by a registered landscape architect and shall consist of the following items:

A. Project Data Sheet. The Project Data Sheet shall contain the following:

1. Project name and address;

2. Applicant or applicant agent's name, address, phone number, and email address;

3. Landscape architect's name, address, phone number, and email address; and

4. Landscape contractor's name, address, phone number and email address, if available at this time.

B. Planting Plan. A detailed planting plan shall be drawn at a scale that clearly identifies the following:

1. Location of all plant materials, a legend with botanical and common names, and size of plant materials;

2. Property lines and street names;

3. Existing and proposed buildings, walls, fences, utilities, paved areas and other site improvements;
4. Existing trees and plant materials to be removed or retained;
5. Scale: graphic and written;
6. Date of Design;
7. Designation of a landscape zone, and
8. Details and specifications for tree staking, soil preparation, and other planting work.

C. Irrigation Plan. A detailed irrigation plan shall be drawn at the same scale as the planting plan and shall contain the following information:

1. Layout of the irrigation system and a legend summarizing the type and size of all components of the system, including manufacturer name and model numbers;
2. Static water pressure in pounds per square inch (psi) at the point of connection to the public water supply;
3. Flow rate in gallons per minute and design operating pressure in psi for each valve and precipitation rate in inches per hour for each valve with sprinklers, and
4. Installation details for irrigation components.

D. Grading Plan. A Grading Plan shall be drawn at the same scale as the Planting Plan and shall contain the following information:

1. Property lines and street names, existing and proposed buildings, walls, fences, utilities, paved areas and other site improvements, and
2. Existing and finished contour lines and spot elevations as necessary for the proposed site improvements.

Section 13. Plan Review, Construction Inspection, and Post-Construction Monitoring for Commercial, Industrial, and Institutional Projects

A. As part of the Building Permit approval process, a copy of the Landscape Plan Documentation Package shall be submitted to the City for review and approval before construction begins.

B. All installers and designers shall meet state and local license, insurance, and bonding requirements, and be able to show proof of such.

C. During construction, site inspection of the landscaping may be performed by the City Building Inspection Department.

D. Following construction and prior to issuing the approval for occupancy, an inspection shall be scheduled with the Building Inspection Department to verify compliance with the approved landscape plans. The Certificate of Substantial Completion shall be completed by the property owner, contractor or landscape architect and submitted to the City.

E. The City reserves the right to perform site inspections at any time before, during or after the irrigation system and landscape installation, and to require corrective measures if requirements of this ordinance are not satisfied.

Section 14. Prohibited Watering Practices

Regardless of the age of a development (commercial, industrial, office, or residential), water shall be properly used. Waste of water is prohibited.

Section 15. Enforcement, Penalty for Violations

The Public Works Director, Planning Services Director, ~~Utilities Director~~ and other employees of the Public ~~Utilities~~ Works Department are authorized to enforce all provisions of this Ordinance.

Any consumer who violates any provisions of this Ordinance shall be issued a written notice of violation. This notice shall be affixed to the property where the violation occurred. The notice will describe the violation and order that it be corrected, cured or abated immediately or within times specified by the City. Failure to receive a notice shall not invalidate further actions by the City. If the order is not complied with, the City may terminate water service to the customer and/or issue a citation.

Section 16. Effective Date

This ordinance shall be effective as of <EFFECTIVE DATE>.

Dated: _____	<CITY NAME>
	By: _____
	Its: _____ Mayor
[Municipal Recorder Attestation and Seal]	

Appendix A

The Maximum Applied Water Allowance shall be calculated using the equation:
MAWA = (ETo) (0.62) (1.15) [(0.8 x LA) + (0.3 x SLA)]

The example calculations below are hypothetical to demonstrate proper use of the equations and do not represent an existing and/or planned landscape project. The ETo values used in these calculations are examples only but are real ETo values from Weber Basin's weather station and should be substituted for

actual ETo values for your specific city. For actual irrigation scheduling, automatic smart irrigation controllers are required and shall use current reference evapotranspiration data (most of which is part of each controller company's supporting weather network) or soil moisture sensor data.

(1) Example MAWA calculation: a hypothetical landscape project in Layton Utah with an irrigated landscape area of 20,000 square feet without any Special Landscape Area (SLA= 0, no edible plants, or recreational areas). To calculate MAWA, the annual reference evapotranspiration value for Layton is 32.8 inches as documented from the Weber Basin weather station data.

MAWA = (ETo) (0.62) (1.15) [(0.8 x LA) + (0.3 x SLA)]

MAWA = Maximum Applied Water Allowance (gallons per year)
ETo = Reference Evapotranspiration (inches per year)
0.62 = Conversion Factor (to gallons)
1.15= Delivery Inefficiency Factor (sprinkler system uniformity etc.)
0.8 = ET Adjustment Factor (ETAF) typical for cool season turf
LA = Landscape Area including SLA (square feet)
0.3 = Additional Water Allowance for SLA
SLA = Special Landscape Area (square feet)

MAWA = (32.8 inches) (0.62) (1.15) [(0.8 x 20,000 square feet) + (0.3 x 0)] = **374,182 gallons per year** (or 1.15 AF/yr)

(2) In this next hypothetical example, the landscape project in Ogden Utah has the same ETo value of 32.8 inches and a total landscape area of 15,000 square feet. Within the 15,000 square foot project, there is now a 2,000 square foot area planted with edible plants. This 2,000 square foot area is considered to be a Special Landscape Area.

MAWA = (ETo) (0.62) (1.15) [(0.8 x LA) + (0.3 x SLA)]

MAWA = (32.8 inches) (0.62) (1.15) [(0.8 x 15,000 square feet) + (0.3 x 2,000 square feet)]
= 20.34 x [12,000 + 600] gallons per year **= 280,696.8 gallons per year** (or .86 AF/year)
